Re: Ground Water Monitoring Study  
NRC Source Material License SUA-917  
Docket No. 40-3453

Gentlemen:

This correspondence transmits four (4) copies of the Dames & Moore report, "Ground Water Monitoring Project - Uranium Mill Tailings Impoundment - Moab, Utah - For Atlas Minerals". The enclosed report is submitted in partial fulfillment of the August 11, 1982 License Condition No. 53, Amendment No. 8 to our Source Material License SUA-917. It is being submitted later than the October 1, 1982 deadline in accordance with a verbal extension granted by Mr. Peter Garcia of your staff. The delay was due to delays by contract laboratories performing sample analyses.

We trust the report sufficiently satisfies your needs. If you have any questions, please contact me at your convenience.

Yours Very Truly,

Richard E. Blubaugh  
Regulatory Affairs Manager
