

# Inter-Office Memorandum

Date: July 20, 1979

Subject: THREE MILE ISLAND UNIT 2  
RADWASTE OPERATIONS REVIEW  
COMMITTEE (RORC)

To: DISTRIBUTION

Location: Three Mile Island  
Waste Management Activity

On July 16 we received NRC approval in the format of a temporary change to the technical specifications with regard to the establishment of the Radwaste Operations Review Committee. This committee is being established to adequately review procedures, tests, modifications, events, and radiological hazards associated with radwaste management.

Attachment I, which was forwarded with the NRC approval letter establishing the RORC, will be part of Section 6 of the new Technical Specifications for TMI Unit 2.

Attachment II establishes the RORC membership and duty sections. Each section will have RORC duty for one-week intervals. Each duty week commences at 1600 hours Thursday and runs for seven days terminating at 1600 hours the following Thursday. Each RORC member must be available at all times during his duty week. In the event you will not be available - for whatever reason, it is your responsibility to obtain an alternate to substitute for you. Any time an alternate is to cover for you, you shall inform the RORC administrator, RORC chairman, and duty superintendent in advance.

J. J. BARTON
