Inter-Office Memorandum

Date June 19, 1979
TSG-231

Subject Backup Pressure Control System,
Phase 2 of Task TS-6B

To H. R. Lane (B&R)

Location Three Mile Island

Reference: Memo dated June 8, 1979, Elam to Lane, Same Subject

In addition to proceeding with engineering for a control room panel, (referenced memo) you are requested to perform a conceptual study of a local panel with an air-tight enclosure and positive ventilation air pressure.

Such a design might provide a simpler approach to the problem of potential airborne contamination at the control panel. Your initial response is requested by June 22, 1979.
