Re: US-NRC Materials License Amendments

Dear Michael:

As I discussed with you during our phone conversation of December 9, 1987, on December 15, 1987 a transfer of assets will occur between RCA Corporation and GE Solid State Incorporated. This is a direct result of the merger of GE and RCA.

This site, Somerville, New Jersey, presently maintains two material licenses: 29-04563-02 and 29-04563-03. The licensee presently listed on these licenses is RCA. I am writing to request that the licensee on the above licenses be amended to read: GE Solid State Inc.

In addition, as a result of recent organizational changes, amendments are being submitted for the positions of Radiation Safety Officer (RSO) in the Somerville facility and Supervisor of the divisional materials license, number 29-04563-03.

I am requesting to be listed as the person responsible for both of these areas.

The training I have received in the safe handling of equipment that contains radioactive materials has come as a result of my formal education and my work experience. My formal education consists of a Bachelor of Science in Natural Resources from the University of Michigan (this included four courses in physics). Currently, I am completing a master's degree in occupational health with an emphasis on the study of the effects of the occupational handling of hazardous substances.

My work experience is the result of my position as Health and Safety Engineer at GE/RCA Solid State. I am responsible for all health, safety and environmental training, including all aspects of our radiation safety program. In addition, I coordinate our radiation leak test surveys, and our exposure monitoring program, and provide guidance to all regulatory inspectors, NRC or NJDEP. My experience with our specific pieces of equipment has come from working with Zeno Streletz, the Supervisor of license 29-04563-02 and site Gammacell Specialist. He has provided me with extensive training in regard to the operation of the Gammacell.

If any further information regarding these amendments, is necessary, please feel free to call me at (201)685-6588.

Sincerely,

Robert Cappadona  
Health and Safety Engineer
