Date: July 14, 1979

GPU Service

Subject: Repair of sample line valve SNV-6

To: G. Kunder

Location: TMI

In order to maintain the reliability of the primary sampling program and to limit the exposure to personnel obtaining samples, we find it acceptable to remove the sample line RCS pressure indications from service for a limited period of time of approximately 1 hour while repairing valve SNV-6.

During this period the RCP cavity seal and pressure will be used as the primary RCS pressure indication.
