MEMORANDUM FOR: P. Wagner, Lead Engineer, ALARA, DOR *DORO*
FROM: W. C. Burke, Leader, Applications Section, ETSB, DSE
SUBJECT: REVISIONS TO THE RADIOLOGICAL EFFLUENT TECHNICAL SPECIFICATIONS

Attached are three revisions for the Radiological Effluent Technical Specifications. The first of these is the addition of a new alternate specification for explosive gas mixture for hydrogen rich systems for PHRs. The other two involve revisions to Tables 3.3-13 for PHRs and 3.3.7-12-1 for BMRs. Except for the upcoming revision to Specification 3.11.4 concerning 40 CFR Part 190, and those changes discussed during the week of November 19, these complete the revisions we believe are necessary at this time.
