Re: NRC License XB001010

Dear Elaine:

Further to our conversations related to the Saunders-Roe Developments Ltd. request for a further increase to our Export License (our letter of 21 October 1982 refers), I have established the following facts with SRDL:

- a. H3 usage in 1980-1981: 312,426 curies
- b. H3 usage in 1981-1982: 219,594 curies
- c. Projected usage in 1982-1983: 990,000 curies

The main reason for this increase projected in 1982-1983 is the emergence of some large potential orders for tritium lighting devices (signs, markers, etc.) which look reasonably likely to be placed during the period. To be prepared for this eventuality, SRDL has obtained a new storage license from the British Department of the Environment to cover production needs. If expected orders do not materialize however, then the quantity called off from Oak Ridge would be, naturally, smaller.

I hope this information is what the State Department requires to approve the Export License. Please let me know if you require further data.

Very best regards,

Eric J. Paisley
