Washington, DC 20555

Gentlemen:

Subject: Oyster Creek Nuclear Generating Station
Docket No. 50-219
Facility Operating License No. DPR-16
Core Operating Limits Report (COLR) Revision

As required by Technical Specification 6.9.1.f.4, a revision to the COLR for Oyster Creek Cycle 14 operation is attached for NRC staff information.

This COLR revision (Revision 5) contains a change to the Minimum Critical Power Ratio operating limit from 1.47 to 1.51 based on a reanalysis of end-of-cycle 14 conditions. The change is necessary since the axial exposure shape has been trending away from projected end-of-cycle values used in the original analysis.

Very truly yours,

R. W. Keaten
Vice President & Director
