CHAIRMAN BECHHOEFER: Good morning ladies and gentlemen. Before we resume this morning, are there any preliminary matters including -- are we going to be advised about the meeting last night?

MR. PATON: Yes, Mr. Chairman.

CHAIRMAN BECHHOEFER: You may proceed. Why don't you begin with that.

MR. PATON: Well we met and Mr. Kane talked to Dr. Peck and the agreement was that the information needs to be studied a littleffurther, so I expect to ask Dr. Peck some questions and demonstrate what we are interested in. I expect that I will ask him a question and I expect that he will say that he wants the opportunity to look at it a little further and then the record will show what the subject is and then we are going to indicate to the Board that Dr. Peck is going to take a look at it and send us the information and we are going to take a look at it and then we will reply. And that way, the record will be complete.

It has to doowith additional settlement. What I am saying is that the record will be clarified, I hope, when I get through asking Dr. Peck some questions.

CHAIRMAN BECHHOEFER: All right. Are there other preliminary matters?

MR. STEPTOF: Chief Judge Bechhoefer, on an 1 2 unrelated matter -- I suppose the Board already knows 3 this -- but last week the Supreme Court granted 4 certiorari in the Table S-3 case which means they have 5 agreed to hear the appeal and that that of course will 6 continue to stay the effectiveness of the Court of 7 Appeals' decision pending that review by the Supreme 8 Court.

13

CHAIRMAN BECHHOEFER: I had heard that although I have not seen it in writing. But I have heard that.

MR. PATON: There is another preliminary matter, Mr. Chairman, and that is I think we should discuss the order of witnesses.

We had requested -- the plan I think was when
Dr. Peck finished, that we would proceed with the
Applicant's case, their structural case. The Staff has
asked the Applicant if we could put Mr. Kane on following
Dr. Peck and that they hold off on their structural
witness until after Mr. Kane has completed his testimony.
They have agreed to this.

21 MR. STEPTOE: That is correct,
22 Chief Judge Bechhoefer. The Staff has also agreed to
23 recall Mr. Kane, if necessary, for cross-examination on
24 one issue which more properly relates to the structural
25 analysis of the building and the input parameters for

CHAIRMAN BECHHOEFER: Would you plan to present Mr. Kane with some of your structural witnesses, Mr. Rinaldi --

10350

MR. PATON: We did not plan to do that. If that becomes necessary and the Board wants to do it that way, we would do it but we did not plan to do it that way.

CHAIRMAN BECHHOEFER: I see.

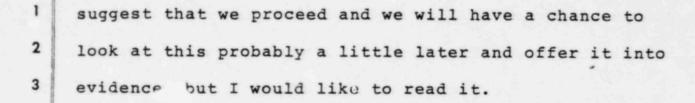

MR. PATON: Mr. Chairman, also, could we ask the Applicant if they have been able to produce these stipulations that we have been discussing? I would like to take care of that near the beginning of our discussion on the Diesel Generator Building instead of waiting until the -- I have not seen it in its present condition yet.

Can we ask when that will be produced? MR. MILLER: Right now.

MR. PATON: That's great.

CHAIRMAN BECHHOEFER: Is this going to be Joint Exhibit 5?

MR. PATON: I expect so, Mr. Chairman, yes. I want a chance to read it in its present condition. I

CHAIRMAN BECHHOEFER: All right, fine. Any further preliminary matters?

MS. SINCLAIR: Yes, I would like to comment on a matter in which these hearings are being conducted.

Dr. Peck was permitted to delete a portion of his testimony at the last minute. That testimony had everything to do with advancing the theory that he had relied on for his predictions, the casagrande theory. He spoke of it in numerous times throughout his text and this altered in a significant way, the basis on which cross examination could be pursued.

Dr. Harbour stated that these deletions were made known to us in a conference call on Friday, December 3rd. This still gives us only three hours of one working day before 9:00 o'clock a.m. Monday morning, or yesterday, to realize cur cross examination.

The Federal Code requires that testimony on which cross examination will take place, should be filed at least five days ahead of time, that is 10 CFR Part 2 and Appendix 5, Section 2.

In the text, and which was admitted on pages 24 and 25, Dr. Peck speaks most favorably about the casagrande, four times on page 24 and at least three times on page 25. The large sections deleted from Dr. Peck's testimony indicated his approval of the

casagrande theory. He also deleted all the Woodward and Clyde curves from his testimony which he relied on in part and discussed it in his testimony as being developed according to the standard casagrande theory.

WASHINGTON,

REPORTERS BUILDING.

300 7TH STREET, S.W.

When I attempted to point to those tables in the revised testimony, of course I couldn't find them and this accounts for the snickering on the part of the Applicant's counsel and Dr. Peck when I attempted to point to those as an example of reliance on the casagrande theory. Dr. Peck of course would know that since I had Dr. Anderson for a consultant, that Dr. Anderson had studied with Dr. Seed. Dr. Seed is an outstanding expert on soil mechanics at the University of California at _Berkley. Dr. Seed is opposed to the use of the casagrande theory; and therefore, it is Dr. Peck's best interest to cull that part of the testimony of fact out of his testimony.

Dr. Anderson had advised me on what the shortcomings were on the casagrande theory and I was pursuing my cross examination on that basis.

Eurthermore, I have additional information but I cannot give it to the Board at this time but Dr. Seed, who is an outstanding expert on seismic analysis in California, and he has many reasons to be concerned about soil mechanic analysis. He would not agree at all

on Dr. Peck's evaluation, that is, that seismic analysis would have nothing to do with secondary settlement.

I will try to bring those references and any information to this Board I received. Thank you.

MR. MILLER: I would just like to respond very briefly. First of all --

CHAIRMAN BECHHOEFER: I was going to say one thing, simply, I think you have drastically misunderstood Dr. Peck's testimony that we not only hav e received but that we got before, did not ever rely on casagrande, either theory or methodology, whichever you determine. There was no reliance -- in fact, it was very critical of that and what was deleted was a portion which was critical of that theory.

The portions you have cited are the relationship to the particular type of instrument -- piezometer which Dr. Casagrande apparently developed. That still remains but that doesn't relate at all to the matter for which was deleted which was critical of Dr. Casagrande, was not -- Dr. Peck, as far as I understood it, never relied on..all of that, so that I wonder if you are listening to the testimony.

There was never any reliance on it. It was critical, as I have read it at least --

MS. SINCLAIR: Ahl of these Woodward and Clyde

tables, consolidation test tables, were developed according to --

CHAIRMAN BECHHOEFER: He was criticizing that. That was in there because he thought it was not a good system; not because he was relying on the system. That is the way I read it. Now if I am misreading it, I would like to be told. Mr. Miller, maybe you can add further comments. My understanding was that Dr. Peck never relied on it at all. I am a layman who is listening to this testimony and reading it, but it is my understanding of it.

it.

1 MR. MILLER: Mr. Chairman, I think that your 2 understanding and mine certainly coincide. I would like 3 to first state that I am not aware of any snickering that 4 is going on with respect to the examination by Miss 5 Sinclair at any time nor by any other Intervenor. Further-6 more, I think that everybody has been most solicitous of 7 the Intervenors, despite repeated interruptions when other 8 people are talking, which is a characteristic that Miss Sinclair has in the way she conducts herself in these 10 proceedings.

So I resent and absolutely reject the notion that there has been any impoliteness shown to her or any other intervenors in the conduct of these proceedings.

Second of all, with respect to the scope of cross examination, the deletion of the material, the testimony that was circulated to the Board and the parties on November 15th, was substituted. There was substitution made for it. There is a paragraph, 4.3 in the testimony as admitted on page 80, of Dr. Peck's testimony which I believe, he would testify, if asked, is a capsule version of the detail that he went into in the original version of his testimony. I believe that Judge Bechhoefer is quite correct, although Dr. Peck is certainly available, to answer questions about it, in asserting that the Casagrande instructions tha were used as a result -- were

t2

MS. SINCLAIR: I would like to state in my own 1 2 behalf that I have been aware of numerous instances when 3 counsel for the Applicant has discredited through their 4 actions and their attitudes and attempted to discredit 5 what I was talking about in that fashion. And, given the 6 fact that we appear here at a greatly prejudiced 7 position in terms of professional assistance -- that is, 8 we have no lawyers, we have no expert withesses -- we are 9 attempting to deal with topics of great importance to 10 this community and to our lives and to our families.5 11

I feel that I need to express my desire that counsel should conduct themselves with the kind of decorum that they claim they are conducting themselves with for the benefit of the record and that this should be a reality in these hearings.

Thank you.

CHAIRMAN BECHHOEFER: Any further matters?

MR. MARSHALL: Well, I might just say, Judge, that I live so far into the woods that I fail to see the forest for the trees, inclusive of the well-worn family tree, the Bar Association.

CHAIRMAN BECHHOEFER: Well, let's resume cross-examination of Dr. Peck.

> Mr. Marshall, you're first up this morning. MR. MARSHALL: Thank you very much, Judge.

2-2	1	It's been a long time, hasn't it, Dr. Peck?
•	2	DR. PECK: Over a year.
	3	Whereupon,
•	4	RALPH B. PECK,
345	5	called as a witness by counsel for the Applicant, having
20024 (202) 554-2345	6	previously been duly sworn by the Chairman, was
(202)	7	further examined and testified as follows:
20024	8	CROSS-EXAMINATION
i, D.C.	9	BY MR. MARSHALL:
REPORTERS BUILDING, WASHINGTON, D.C.	10	Q To get things off to the right start this time,
ASHIP	11	for the record, you do not have a plane to catch today,
ING, W	12	do you?
	13	A That is right.
FERS I	14	Q All right. So we can sort of just kind of
EPORT	15	move along? Because I am not in any hurry.
	16	A I wouldn't want to push it that far.
300 7TH STREET, S.W.	17	Q Well, I don't want to excite you or get you
H STR	18	overexcited, or anything like that, because I'm just a
00 TL	19	farm boy, like I told you.
62	20	Now, Doctor, I want for my first question to
	21	ask you, last night I spent a great deal of the night
	22	reading your symposia and gave a good portion of that
	23	time to it, so that's why I say I'd like to just kind of
	24	go a little easy.
	25	Doctor, would you tell me for my first question,

2-

10359

what assumptions have you made in this matter, Doctor? 2-1-3 1 2 MR. MILLER: I'm sorry. I hate to object to 3 the very first question, but it's so vague. Can't we be 4 a little bit more precise than what --5 MR. MARSHALL: I'll get to that, if you'll let 300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345 6 him answer the question. 7 MR. MILLER: I don't know how the witness can 8 answer that question. 9 MR. MARSHALL: He can answer it very easily. 10 MR. MILLER: Since he has over 80 pages of 11 prepared testimony with him --12 MR. MARSHALL: You're hurting yourself, 13 counsellor. 14 This is cross-examination, Judge. I'll get to 15 that, if you will just give me a chance. 16 I think Ms. Sinclair very aptly put it just a 17 few moments ago, counsellor. 18 MR. MILLER: Well, I am not going to permit, 19 without protecting the record, a witness to be harassed 20 on questions that are so vague --21 MR. MARSHALL: I will not harass the witness. 22 CHAIRMAN BECHHOEFER: I don't think the witness 23 can really answer that question without almost reading 24 his entire testimony. 25 I think you'll have to be more precise.

10360

2-1-4		
	1	MR. MARSHALL: I'll be very precise.
•	2	CHAIRMAN BECHHOEFER: Assumptions on what
	3	subject?
•	4	MR. MARSHALL: I just wanted him to answer the
345	5	question any way he wanted to answer it.
554-2	6	I'll get to that, and you'll find out I'm not
(202)	7	just asking questions
20024	8	CHAIRMAN BECHHOEFER: I think you'll have to
, D.C.	9	make it more precise as to what areas, because there are
REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345	10	thousands of assumptions in this testimony.
ASHIN	11	MR. MARSHALL: Thank you. That's one of the
NG, W	12	things that I wanted you to get to, both you and
e un	13	counsellor over here.
ERS B	14	Very good.
PORT	15	CHAIRMAN BECHHOEFER: I'm just taking a number
	16	off the top of my head, but there are many, many
- 2fol 300 TTH STREET, S.W.	17	assumptions
-2fol -	18	
0 7TH	19

10362

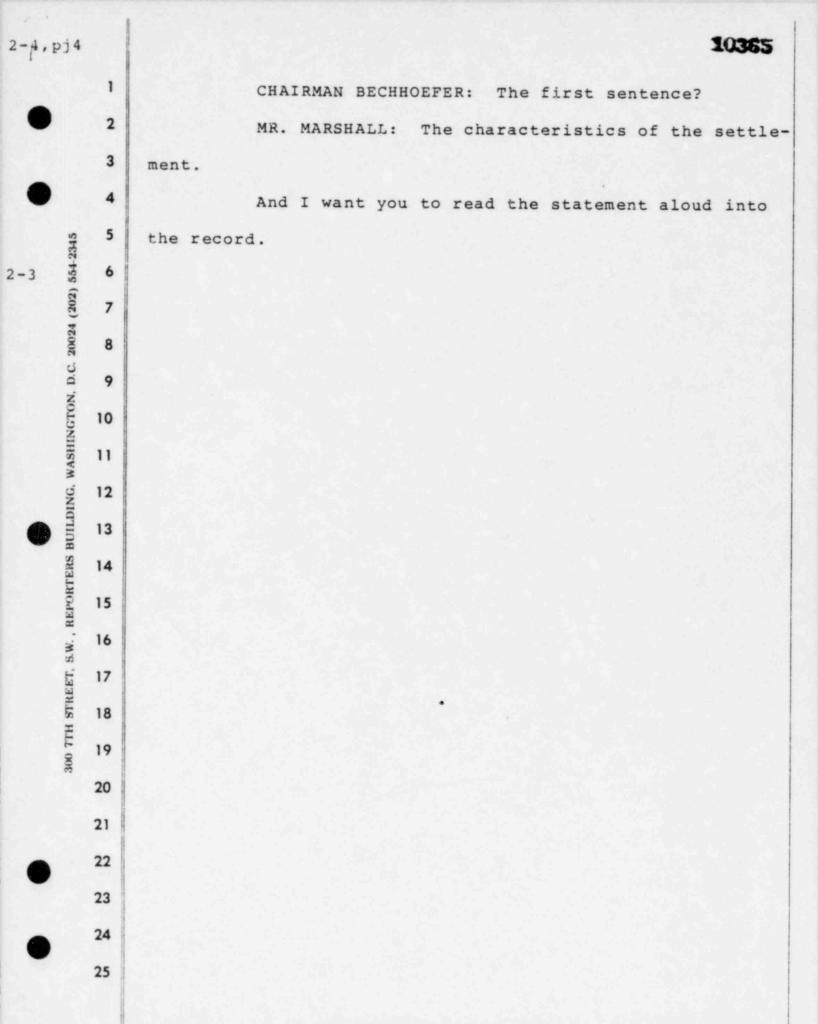

ssumpti	ods	MR. MARSHALL: That's good that he made a
•	2	similar observation.
	3	CHAIRMAN BECHHOEFER: No, I think he can t answer
•	4	the question as you've asked it. Now, you can pin it down
345	5	a little bit
20024 (202) 554-2345	6	MR. MARSHALL: I'm confident that the doctor
4 (202	7	could answer it, but we'll strike that question. I will
	8	go to my next question.
v, n.c.	9	BY MR. MARSHALL:
REPORTERS BUILDING, WASHINGTON,	10	Q Now, Doctor, as I said before, I read your
VASHI	11	entire symposium regarding the Diesel General Building,
ING, V	12	and after struggling through a great deal of strange
	13	terms, you admit on page 37 and that starts down in
LERS 1	14	the transfer reference, and in particular down I want
EPOR	15	you to read that down there which starts "the reference
Ň	16	points". I want you to read that for the record, on page
	17	37. And with the word load.
A STRI	18	MR. MILLER: Beginning with the word "There-
300 7TH STREET,	19	fore"?
	20	MR. MARSHALL: No, it begins with yes, that's
	21	correct. Yes. Yes.
	22	I want him to read that into the record.
-	23	MR. PATON: Judge, could I ask again, what is
	24	the starting place?
-	25	MR. MARSHALL: It's on page 37 and it's down

1	eight from the bottom. It starts with therefore.
2	MR. PATON: Okay. Thank you.
3	MR. MARSHALL: And it stops with load, and I
4	want you to mead that into the record, Doctor.
5	BY THE WITNESS:
6	A (Reading)
7	"Therefore, the reference points on the
8	building walls, even without correction, are
9	
10	the best indicators of the progress of settle-
11	ment under the surcharge load."
	BY MR. MARSHALL;
12	Q Thank you. Now, Doctor, this is my question:
13	Doctor, isn't it true that this discovery could be made
14	by anyone?
15	A I should think so.
16	Q Thank you. Two: Would you say that it requires
17	a Ph.D. or an expert for your conclusion?
18	A No, although I don't suppose that would be a
19	disadvantage either.
20	
21	i asked, boccor,
22	if it requires a Ph.D. or an expert to arrive at this
23	conclusion.
24	JUDGE HARBOUR: He answered the question.
	CHAIRMAN BECHHOEFER: Yes, he answered the
25	question.
	ALDERSON REPORTING COMPANY, INC.

2-4, pj3

10364

1 MR. MARSHALL: Yeah, he answered it, but he said--2 well, all right, he qualified it a little bit different than I thought he should, because I'm a farm boy, and I 3 4 want you to keep remembering that. 5 300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345 BY MR. MARSHALL: 6 0 Three: Doctor, let's turn to page 39. It's 7 entitled Interpretation of Settlement Data. I would like 8 to have you read, it says here, "Significant information 9 concerning the characteristics of a settlement -- " I 10 want you to read this statement aloud into the record. 11 MR.MILLER: Excuse me. These matters are already 12 in the record. 13 MR. MARSHALL: That's all right. 14 MR. MILLER: Well, but why burden the record 15 with having him read it in again, Mr. Marshall? 16 MR. MARSHALL: I'll get to that if you just give 17 me an opportunity. You've all -- you've out-guessed me 18 all the way along, all of you, and you're experts and 19 I'm not. Give me a chance, will you. Maybe we might 20 learn something. 21 MR. MILLER: How many sentences do you want him 22 to read into the record? 23 MR. MARSHALL: I just want him to start and read-+ 24 I want him to read that statement out loud, this statement 25 right here, "The most significant information concerning" --

4	6	10		Ċ.	-
	1		2		10

2-3-1		
ecord	1	JUDGE HARBOUR: The first sentence you're
•	2	referring to, Mr. Marshall?
1.1.1	3	MR. MARSHALL: Yes, on the Diesel Generator
•	4	Building, and the surcharge. I want him to read that into
345	5	the record.
20024 (202) 554-2345	6	BY MR. MARSHALLARSHALL
(202)	7	Q These portions I want you to I want to bring
20024	8	this to your attention later at some point in time.
D.C.	9	(Discussion off the record.)
TON	10	
HINC	11	MR. MARSHALL: I'm not clouding up the record,
WAS		if that's what you're afraid of. And we're not going to
DING,	12	be long here.
BUILDING, WASHINGTON, D.C.	13	CHAIRMAN BECHHOEFER: Okay, we'll allow him to
REPORTERS	14	do it this time. But not too many of these sentences
REPOH	15	MR. MARSHALL: Oh, all right.
	16	CHAIRMAN BECHHOEFER: because they are
300 7TH STREET, S.W.	17	already in the record.
H STR	18	MR. MARSHALL: I understand, but I just want
00 7T	19	to pick this out for the Board later.
	20	CHAIRMAN BECHHOEFER: All right. Well, you can
	21	
	22	do it by cross-referencing, too, by just having him refer
•		and asking him to refer to a certain sentence.
	23	But we'll let him read this one in, if you want
•	24	him to.
	25	

BY THE WITNESS:

-3-2

1

300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

25

2	A "The most significant information concerning the
3	characteristics of the settlement of the Diesel Generator
4	Building under the surcharge loading is contained in the
5	semi-logarithmic plots contained in Responses to NRC
6	Requests Regarding Plant Fill, Supplemental Figures 27-52
7	through 27-77, in which the linear relationship between
8	settlement and logarithm of time is clearly shown between
9	about Days 100 and 200."
10	BY MR. MARSHALL:
11	Q Okay, now let's turn to Page 50. On the seventh
12	line, second paragraph, Page 50, starting with inferences
13	A The remainder of the paragraph?
14	Q No. Doctor, I have found some assumptions you
15	have made at this point. Would you pick out those
16	assumptions, please?
17	A Yes, these particular inferences are with
18	respect to the base level for piezometric pressures,
19	which, as I said, was not exactly known because the
20	surcharge existed.
21	Q Well, Doctor, could you go to the blackboard
22	there and draw that out for us on the blackboard?
23	MR. MILLER: Excuse me. I don't believe
24	Dr. Peck had concluded his answer.

CHAIRMAN BECHHOEFER: Wait until he finishes.

MR. MARSHALL: Okay.

BY THE WITNESS:

A (Continuing) One assumption -- one possibility, let us say, was that the normal ground water level without any surcharge would have been about three feet below pond elevation, and that assumption has certain justifications which I have mentioned.

And a second assumption is that the relation between ground water and time during this period from January to the end of May has the same variation with respect to time as the variation in level of the pond but that the actual values at the beginning and the end of this time period are the ones that were measured in the piezometers.

Those two assumptions gave two possibilities for the variation of base level, base ground water level with time during that period of the surcharge, and they appeared to me to be reasonable limiting assumptions. The real variations should have been somewhere between those two.

BY MR. MARSHALL:

Q Are you through, Doctor?

A Yes, sir.

Q Can you go to the blackboard now and indicate on the blackboard the inferences that can be drawn on the basis of reasonable limiting assumptions? Can you drawn that out for us on the blackboard?

10369

MR. MILLER: I object. I see no reason to have Dr. Peck put either words or figures on the blackboard at this point in time. It is simply irrelevant to anything before this Board, unless Mr. Marshall can indicate what this exercise --

MR. MARSHALL: Well, I'll try, if I can have -this is cross-examination, and anything that's done on direct examination -- and certainly this is direct testimony -- I can certainly examine, I would think.

MR. MILLER: Yes, but I believe it's improper to require a witness to perform calculations or to draw charts or diagrams on cross-examination.

MR. PATON: Mr. Chairman, I think that I might agree with Mr. Marshall if he could demonstrate to the Board that the only -- that whatever point he's trying to make is relevant, and then that the only way he can make it is to have the witness go to the board and draw it on the board.

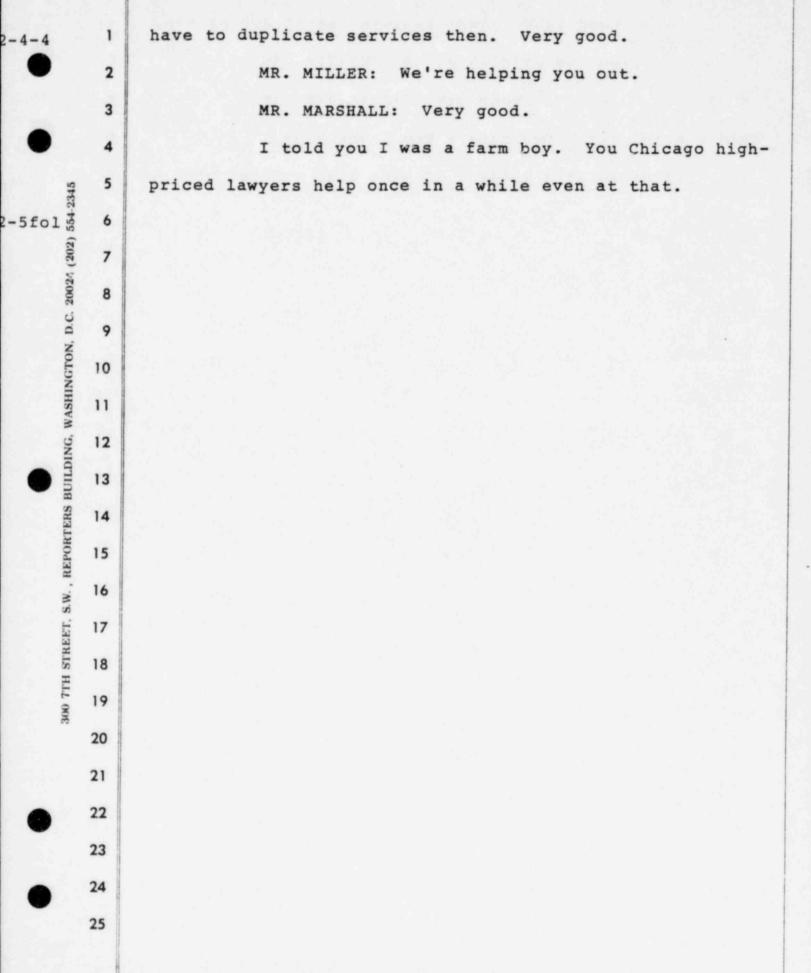

1 MR. MARSHALL: Thank you. 2 MR. PATON: I mean, I think he should first 3 clarify exactly where he's going. And then, if that's 4 relevant, the Board could deal with it. 5 MR. MARSHALL: It will become very apparent 300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345 6 in the next just very few seconds here, very few minutes. 7 I'm not going to have a long dissertation here today. 8 We're not going to -- I'll be over very shortly. 9 MR. PATON: I'm asking the Board to ask you 10 to state for the record where you're going. 11 CHAIRMAN BECHHOEFER: I think you ought to do 12 that, because --13 MR. MARSHALL: Weil, I'm going to conclude this 14 cross-examination in just a very few minutes, after he's 15 done this. I'll probably ask one more question. Maybe 16 two. 17 CHAIRMAN BECHHOEFER: No, but what I'm saying 18 is why will drawing anything on the board lead to 19 anything --20 MR. MARSHALL: It would help to clarify the 21 questions that he's made on his assumptions so that we 22 can best understand him. 23 We're not experts. I've been telling you over 24 and over. You have to draw pictures for us. 25 We're Intervenors.

2-4-2

.3		10371
	1	MR. MILLER: Yes, and in response to the
•	2	Intervenor's contentions, a good deal of talent has been
	3	assembled by both the Staff and the Applicant to respond
	4	to the concerns that are a basis for that.
	5 345	MR. MARSHALL: Not from me. I haven't caused
	9 554-2	any grief.
	4 (202	Would you say that?
	8 8	All right then, please.

That's right. A

Now, as far as I can see, Doctor, in this entire 0 work, you have made three assumptions. Doctor, those are your only assumptions. Could there be any more for such an important situation?

That's my question.

MR. PATON: I object unless he asks the witness whether he agrees that those three assumptions were the only assumptions he made.

That's a premise that I don't think the record has established.

MR. MARSHALL: Well, the record doesn't reflect that there's any other than these three.

MR. PATON: Well, if he would ask the witness --I think the witness is the one that should --

20 MR. MARSHALL: Well, I tried that in the first place.

22 CHAIRMAN BECHHOEFER: You asked it differently. 23 Ask him if those three are the only assumptions. 24

BY MR. MARSHALL:

Well, Doctor, are these the only three 0

2-5-2	1	assumptions that appears in your work?
•	2	A No, I'm quite sure they're not.
	3	Q Can you show me some others?
•	4	Like I said, I spent the biggest part of last
345	5	night reading your work.
554-2	6	MR. PATON: I object, Mr. Chairman. I can't
W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345	7	conceive of the purpose of Dr. Peck leafing through his
2002	8	testimony and demonstrating additional assumptions that
N, D.C	9	he made.
NGTO	10	I'm not sure what purpose it would serve.
WASHI	11	MR. MARSHALL: Well, now, let's see. We'll
OING,	12	wait for the ruling.
BUILA	13	CHAIRMAN BECHHOEFER: I think we'll have to
TERS	14	sustain that one.
REPOI	15	MR. MARSHALL: Very well.
S.W.	16	CHAIRMAN BECHHOEFER: I think there are a
REET,	17	number of other assumptions, but
500 7TH STREET,	18	MR. MARSHALL: Then we'll go on to a little
300 7	19	more further.
	20	BY MR. MARSHALL:
	21	Q Let's see if we can find the assumptions. Let's
•	22	turn to Page 51. I'd like to have you read the second
	23	paragraph on Page 51 into the record.
•	24	MR. MILLER: Mr. Marshall, will it help if I
	25	stipulate that the word assumption appears in that

	10373
1	paragraph? Will that be sufficient identification for
2	the record, without having Dr. Peck reread testimony
3	MR. MARSHALL: No, no. There's something else
4	that I'm interested in here, rather than assumptions,
5 6 7 8	right now.
6	MH. MILLER: It is a matter of record,
7	Mr. Marshall.
8	MR. MARSHALL: It's in the record, but
9	BY MR. MARSHALL:
10	Q Well, I'll just ask you, you see, in paragraph
11	I want to take my time here.
12	Second paragraph, Page 51. It appears you have
13	disregarded all your assumptions on that paragraph,
14	Doctor.
15	A Is that a question, sir?
16	Q Yes.
17	A By the second paragraph, do you mean the one
18	that begins with irrespective or the one that begins with
19	in summary?
20	Q The one the assumption it is equivalent to
21	stating that there was no excess pressure, then going
22	down, "irrespective of choice or limiting assumptions,"
23	and to the end of that sentence.
24	Can you read that, "irrespective of choice,"
25	starting there, and end up with "should not be expected"

ANAME

ALDERSON REPORTING COMPANY, INC.

2-5-3

into the record.

A "Irrespective of choice of limiting assumptions, the hatched areas correspond well with the times at which maximum settlements were initiated. Since the settlement curves are influenced by the rigidity of the structure, whereas the piezometers represent point measurements, an exact correlation should not be expected."

9 Q That's correct. That's all I wanted to know.
10 And I'm saying -- and my question is that isn't it true
11 that it appears that you disregarded all of your
12 assumptions there?

A No, what this says is that having made two limiting assumptions within which the actual situation ought to fall because they are limiting assumptions, you get about the same answer either way. And that means, then, that one can accept the results or the conclusions that it draws from either of these assumptions.

300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

MR. MILLER: -- where we are not even close to an orderly proceeding which is designed to develop information which is going to be of use to the Board.

MR. MARSHALL: This is my last question. I'm taking exception. I probably won't even do any redirect unless you make it nasty.

MR. MILLER: Excuse me, Mr. Marshall.

Judge Bechhoefer, it seems to me that the Board, and certainly on behalf of the Applicant, have been really quite forebearing in terms of objections, but we're really just cluttering up the record with total irrelevancies.

MR. MARSHALL: Judge, I take exception to his objection, and I want to say this, that a man that can make all of these predictions and all of these assumptions and all these logarithms certainly ought to know north from south, and I will not let Mary Sinclair nor Barbara Stamiris help me out. I want him to answer that one question and that's the conclusion of my cross-examination.

	1	MR. PATON: Mr. Chairman, I would like to
	2	CHAIRMAN BECHHOEFER: It has to be relevant.
	3	MR. MARSHALL: It is relevant.
	4	CHAIRMAN BECHHOEFER: You have to explain why
2345	5	all of
() 554	6	MR. MARSHALL: It is relevant. It is relevant to
WASHINGTON, D.C. 20024 (202) 554-2345	7	my entire examination.
. 2002	8	CHAIRMAN BECHHOEFER: How?
N, D.(9	MR. MARSHALL: Because it is assumption. Now
INGTO	10	I know where north and south is, and I'm not asking the
	11	Court if they know. I'm asking the expert if he knows,
BUILDING	12	in this room, and which way he indicates north to be.
	13	MR. PATON: Mr. Chairman, I would like to show
KEPOKTEKS	14	that the Staff also objects to that question because we
KEPOI	15	can't see its relevance to the issue.
3.W.	16	MR. MARSHALL: The thing is, he could base it
01 REE1,	17	upon an assumption, couldn't he?
IC III	18	CHAIRMAN BECHHOEFER: Why I think that',
he	19	MR. MARSHALL: He could say he doesn't know,
	20	couldn't he?
	21	CHAIRMAN BECHHOEFER: I don't think it is rele-
	22	vant to the testimony.
	23	MR. MARSHALL: It is part of the
	24	CHAIRMAN BECHHOEFER: We will sustain the objec-
2	25	tion. I don't think it is relevant.

10380

1	MR. MARSHALL: That's all the questions I have.
2	CHAIRMAN BECHHOEFER: Mr. Paton?
3	CROSS EXAMINATION
4	BY MR. PATON:
5	Q Dr. Peck, did you say yesterday that optical
20024 (202) 554-2345 & V 9 v	surveys can be read to 1/16th of an inch under ordinary
(202)	circumstances?
	A Yes, I think so, approximately.
BEPORTERS BUILDING, W'SHINGTON, D.C. 10 11 12 13 14 15 15	Q Is it true that optically surveyed settlement
10 IO	readings at Midland were measured to 1/16th of an inch?
11	A I don't know if that is true.
5 12	Q Assuming good engineering survey methods are
071108	followed, do you feel inaccuracy of optical leveling
I SHELL	better than 1/8th of an inch is obtainable?
HOAT 15	A My experience would suggest to me that although
а. 16	accuracies greater than are obtainable, even when one is
	using all the procedures when a construction project to
17 17 18 19 19 19 19 19 19 19 19 19 19 19 19 19	attempt to measure within to read, let's say, to an
112 19	eighth of an inch, that there are likely to be observations
^m 20	that must surely occasionally be as much as an eighth of
21	an inch, different from a succeeding observation which
22	ought to give the same answer, for example. It seems to
23	come out that way.
24	Q All right, Dr. Peck. I may not have understood
25	your answer but I understood it to mean that occasionally

or sometimes, you will get a reading that is as much as one-eighth of an inch, but did I get the thrust of your answer?

A Yes, and perhaps it would be better to say that you could not infrequently be a 16th off and whether it is plus or minus, suggests that when you are reading a reference point over a period of time, even if it doesn't move, it may appear to be an eighth of an inch higher and then an eighth of an inch lower upon successive readings, when in reality, the movement may have been very small.

Q What I want to get at is what degree of accuracy would you hope to obtain, and I respond to your statement where you say, sometimes we may be an eighth of an inch up or an eighth of an inch below --

No, 1/16th of an inch above or below.

Q A 16th above or a 16th below. If you take into account all of the measurements as opposed to some that might be off, what degree of accuracy do you think can be obtained?

A A considerably higher order of accuracy. That is, if one constructs a best fit curve through a series of observations that have been plotted, the accuracy of that curve is considerably higher than of any of the irdividual values.

BY MR. PATON:

2 What level of accuracy -- let me ask that in a 0 different way.

Is this situation at Midland such that it would affect your answer? I mean, is there anything at Midland that would change the answer you just have given?

Not that --A

What I am indicating is, is there anything in 0 Midland that would lead you to believe that the degree of accuracy would be less there than it would be typically?

I don't think so because I was answering the A question from the background of construction projects on which observations of this kind would be made and would be attempted with a fairly high order of accuracy.

With respect to the Midland plant, and the 0 condition at Midland, the importance of differential settlements affecting on the Diesel Generator Building, what order of survey accuracy do you believe should be required?

I think this would depend on the purpose to A which one expects to put the results of the observations.

Let me try the licensing of the nuclear power 0 plant that has, as one of its structures, the Diesel Generator Building.

> Well that's pretty broad. A

10383

From my point of view, and the point of view of the geotechnics of the situation, where I am trying to 2 understand and predict settlements, I suspect I might 3 need a lower order of accuracy that might be needed to 4 determine the -- precisely the shape of the building, for 5 example. 6

Q Let me ask you to try to really address what I said, and that is that whatever considerations we are here for the purpose of determining whether to license a nuclear power plant that has as one of its necessary structures, a Diesel Generator Building.

So what I'm saying to you is, to the extent that you are able to address the precise situation that is before this Board, please do so, and to the extent that you think you are not able to do that, please tell the Board.

MR. MILLER: I guess I will really refrain from 17 objecting until we have some further definition as to 18 where Mr. Paton's line of questioning is going. But I 19 believe we are getting well outside the scope of 20 Dr. Peck's direct testimony. 21

The question as asked, furthermore, is really 22 quite general in terms of asking Dr. Peck to keep in mind 23 all the criteria that the NRC Staff, the Licensing Board, 24

3-2-3		방법은 사망의 성격이 가격을 가지 않는 것 것이라. 것 같아요. 이번 전망 한 것을 수 없는 것을 했다.
	1	director of nuclear regulations and so on, would look
•	2	at in determining whether to license the power plant.
	3	MR. PATON: Mr. Chairman, I can't imagine a
•	4	question that is more relevant and specific and precise
2345	5	than the one
554-5	6	The Board has before it whether or not to license
4 (202	7	the Midland Nuclear Power Plant. The specific issues we
2002	8	are talking about this week is the Diesel Generator
N, D.C	9	Building.
OTON	10	The very, very critical piece of information
WASHI	11	here is the settlement data and the accuracy to which it
NING,	12	was read. If Dr. Peck, for some reason, believes that
REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345	13	within his area of expertise of geotechnical engineering
TERS	14	he has an answer, that's fine. And if he feels some
REPOR	15	misgivings about addressing precise issues that are before
S.W.,	16	the Board, he can say so.
RET,	17	MR. MILLER: That is a drastic
300 7TH STREET,	18	oversimplification of we have had I think by now
300 71	19	literally dozens of witnesses who have addressed this
	20	overall issue of licensing, I suppose in the broadest
	21	sense, the Midland Nuclear Power Plant.
•	22	There are going to be witnesses who will be
-	23	addressing the structural adequacy of the Diesel
	24	Generator Building. Dr. Peck is here to testify on the
•	25	geotechnical aspects of the Diesel Generator Building.

3-3,pj1

300 71'H STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

10386

MR. PATON: Judge Bechhoefer, the geotechnical
engineers tell the structural engineers about settlement,
and the structural engineers take that into account in
their analysis. But it is the geotechnical engineers that
tell the structural engineers what the settlement figures
are.

Now if Dr. Peck disagrees with that, that's fine.
But, I am asking him to what degree of accuracy do you
think it is appropriate in this case -- and I am not
talking generalities, I'm talking about Midland, I'm
talking about today, I'm talking about the Diesel Generator
Building, I am talking about the issues before this Board.
I have difficulty with the Applicant's objection.

14 CHAIRMAN BECHHOEFER: Are you talking about 15 accuracy of settlement?

MR. EATON: I will ask him that question.
CHAIRMAN BECHHOEFER: He may answer.
THE WITNESS: Could I have the question, again.
JUDGE HARBOUR: Mr. Paton, is your question
essentially, is a 16th of an inch accuracy in level
surveys good enough for the geotechnical engineer to make
his evaluation?

MR. PATON: I would like to -- that's an
excellent question. I would like to emphasize to Dr. Peck
that it is in the context of what I am asking -- I am

1 asking him that question in the context of the precise 2 issues that are before this Board, a nuclear power plant, 3 the Midland Nuclear Power Plant, this Diesel Generator 4 Building in this case.

In other words, I am not asking him a general question. I am asking about the issue that is before the Board.

8 THE WITNESS: I will try to answer the question, but I still have some difficulty with it and I will explain why.

For my use, to come to my recommendations or conclusions that seem to me to be significant, I needed settlement time records in order, for example, to determine the effectiveness of the surcharge, when to take it off, things of this sort.

16 In a general way, the accuracy of plus or minus 17 a 16th of an inch for the settlement levels gave time 18 settlement curves that were reasonably satisfactory to make those interpretations. But, you will recall that in order to refine the data, to be able to make a more precise conclusion as to the shape and slope of the time settlement curve on a semi-load plus, we put in 40 borros anchors to get considerably greater accuracy for that particular purpose.

I think it is very hard to generalize on what

accuracy one needs for a broad purpose such as to licensing of a nuclear plant. You make observations for a particular purpose, in one instance to define with the precision one needs, the slope of the time settlement curve for a particular purpose, and in other instances, you don't need the information that precisely or that accurately, and I don't really see how I can generalize without having specific objectives among the many objectives that one has to meet in constructing, I suppose, licensing such a plant.

> Did you read Mr. Weidner's testimony? Yes, very rapidly.

0 Let me show you what chart and ask you if you had a chance to take a look at it.

Dr. Peck, I want to show you page 56 of Mr. Weidner's testimony, and I want to ask you about the straight line that appears near the bottom of that chart. Take your time.

> CHAIRMAN BECHHOEFER: What page? MR. PATON: Page 56.

THE WITNESS: I take it you are referring to this heavy line that goes through the shaded area?

10389

BY MR. PATON:

Q Yes sir. Now first, I want to ask you generally, there are arrows there drawn to some measured settlements and those apparently are the numbers that due not have lines drawn around them. Do you agree that that is the type of information that the geotechnical engineer gives to the structural engineer?

A I'd say that's the kind of information the surveyor gives to the structural engineer in their measured settlements.

Q Do you understand what Mr. Weidner -- do you understand the significance of that straight line? Do you know what he's done there?

A No, I don't believe I do. That is, I have read the testimony but not with an attempt to analyze it.

Q Let me ask you this. Would you agree that the information indicated as measuredesettlements -- you didn't read his testimony to understand that what he did was to -- I will say -- "straight line" that information? Do you understand what that means?

MR. MILLER: I'm going to object to that characterization of Mr. Weidner's testimony, especially

3-4-2		
5-4-2	1	if questions are directed to this witness.
•	2	If there is a portion of his testimony you want
	3	him to comment on, let's get to it.
•	4	MR. PATON: The witness said he read it
345	5	rapidly. If he doesn't understand what I mean, that's
) 554-2	6	fine. I just asked him if he understood what was meant.
1 (202)	7	He may not.
2002	8	MR. MILLER: I think you characterized
N, D.C	9	Mr. Weidner's testimony.
WASHINGTON, D.C. 20024 (202) 554-2345	10	MR. PATON: If he doesn't understand it, that's
VASHI	11	fine.
	12	MR. MARSHALL: Take exception to the
BUILDING	13	objection as usual. He may answer if he knows.
TERS	14	BY MR. PATON:
W., REPORTERS	15	Q Dr. Peck, I understand that you did not spend
S.W. , I	16	a lot of time reading from Mr. Weidner's testimony, and
	17	if it is not immediately apparent to you, that's fine.
300 7TH STREET,	18	CHAIRMAN BECHHOEFER: He can answer the
300 71	19	question you can answer the question ff you can.
	20	THE WITNESS: The question was, do I understand
	21	the significance of this straight line?
•	22	BY MR. PATON:
	23	Q Yes sir.
•	24	A I am not sure that I do. I guess I should
	25	rephrase that by saying that I don't think I do.
	1.1.1.1	

3-4-3		10001
	1	Q Dr. Peck, are you at all familiar with the
•	2	settlement data that was provided to Mr. Weidner to
	3	perform his structural analysis?
•	4	A I know the settlement data that were provided
42	5	to him. I don't know specifically what or all of what
20024 (202) 554-2345	6	might have been given him.
(202)	7	Q Was that not within the scope of your
20024	8	responsibility?
. D.C.	9	A No sir.
REPORTERS BUILDING, WASHINGTON, D.C.	10	Q Do you know who did that?
ASHIN	11	A Not specifically, no sir.
NG, W	12	CHAIRMAN BECHHOEFER: Point of inquiry. When
nirpi	13	Mr. Weidner is here, is he going to be able to answer
ERS B	14	questions about the particular data he was given?
SPORT	15	MR. STEPTOF: Yes sir.
	16	MR. MILLER: Absolutely.
300 7TH STREET, S.W.	17	CHAIRMAN BECHHOEFER: He won't say it was
STRE	18	within the scope of somebody else's responsibility and
417 0	19	he just took what he was given?
	20	MR. STEPTOE: He was provided the information
	21	but he knows where it came from.
	22	MR. MILLER: Correct.
•	23	CHAIRMAN BECHHOEFER: So that if he were
-	24	asked questions as to whether the line was smoothed out
•	25	properly

10201

MR. STEPTOE: He would be able to explain how that line was derived, given the data that he was given by the surveying --

25

MR. PATON: Mr. Chairman, could I say something. Let me make a statement that perhaps the Applicant doesn't agree with but, my concern is the same as yours, Judge Bechhoefer.

The Staff believes that the straight line demonstrated or shown on Page 56 of Mr. Weidner's testimony, that method, that is input that a geotechnical engineer gives to the structural engineer. Now the method followed here, taking actual measured settlement data and straight lining it, our theory is the and the Applicant may disagree -- that that is within the expertise of the geotechnical engineer and not a structural engineer.

The theory is, this is the input, this is the settlement data that the structural engineer uses to do his analysis. Now I want to stay with this because of the Board's concern and my concern that it falls through the crack.

We think this method demonstrated here, the straight lining, is within the expertise of the geotechnical engineer, and so -- just a minute.

What I am indicating is, Dr. Peck, I believe indica.ed that that was not within the scope of his assigned tasks, and from what I just said, I would assume

that Mr. Weidner would not be the appropriate witness. So I have the same concern the Board does.

Now maybe the Applicant disagrees with that --MR. STEPTOE: Judge Bechhoefer, Mr. Weidner will be able to address how this analysis was done, and I might take this opportunity to state that counsel has represented this straight line as if it were derived by using a ruler and drawing a line through the measured points within the error band. That is an oversimplification of how that line was developed, as

Mr. Weidner will be able to discuss.

MR. PATON: Mr. Chairman, that is not responsive to what I said, and if the Applicant disagrees, that is fine.

What I said was, that is not. That is more within the expertise of a geotechnical engineer than a structural engineer. Now maybe they disagree.

> MR. STEPTOE: I guess we would disagree. MR. MILLER: Yes.

JUDGE COWAN: Is it possible to develop right now, between these two counsel, who did indeed decide to put the straight line in, approximating the data in some way because if that can be answered, then that's the person who should explain.

MR. STEPTOE: Mr. Weidner is the person who can

explain that, and I don't want to --

JUDGE COWAN: And take responsibility for it? MR. STEPTOE: And take responsibility for it. Further, the actual numbers which appear here in terms of measured settlement, as opposed to the line which fits through the data, the actual numbers are numbers which came from a surveyor's -- came from Bechtel's geotechnical division, but those numbers -- it is clear that any one who wants to can make comparisons between the numbers, these numbers and the numbers in Dr. Peck's testimony, and they will find that they are consistent.

CHAIRMAN BECHHOEFER: Well I would think Dr. Peck -- maybe he doesn't have enough information -but if he knows the measured settlements and he sees a line, he perhaps could be able to comment whether he thinks that line was drawn correctly, particularly its slope. Perhaps you could develop questions along that line; I don't know. Maybe Dr. Peck will be able to answer from the data he has.

Is there an outstanding question?

MR. PATON: No, there is not. I don't believe there is.

10398

MR. STEPTOE: Excuse me, Judge Bethhoefer, I may have slightly misstated myself. These numbers, I am told by Mr. Afifi of Bechtel, came directly from the surveyors, went to the structural engineers. Mr. Afifi did look at them for the geotechnical department at Bechtel, but the numbers that appear here came straight from the surveyors to the structural engineers. But, it does not modify what I said earlier, that Mr. Weidner is the man to talk about how this line, what appears to be a line here, was derived from the surveying data.

CHAIRMAN BECHHOSFER: I think Dr. Peck, if he has enough information, he certainly has the expertise to give his opinion on whether that line or that slope was derived directly.

If he could do it, I don't know.

MR. MILLER: If Dr. Peck can answer that question, I would be happy to have him do so.

CHAIRMAN PECHHOEFER: Can you answer that one or don't you have enough data to know whether that -- the straight line was drawn correctly in view of the fact -well put it this way, from a layman.

If you connected the points which said, 1.12 and 1.86, you both -- and you are finishing that line

would be considerably different from where it is here -if you connect the data points directly so that -- or almost any of the data points so that --

THE WITNESS: It is hard to answer that without some indication or perception of how that straight line, of course, is going to be used.

I think I can say this, if for some reason one wanted to represent the actual measurements, the actual settlements by a straight line, that this straight line that falls within an error band of plus or minus an eighth of an inch, it appears to be a reasonable representation of the observations. But, I think one has to go a little further and come to some conclusion as to vnat use one wants to make of the straight line, whether one wants a straight line or whether one could deal with a broken line that applies directly on the measurements.

It is the purpose of trying to work with this information to analyze the behavior of the building in some way. Then, how this line fits or what other fit one wants to use, would depend on the structural model that is about to be analyzed as well as on the soil data themselves.

This is certainly a soil structure interaction problem and it sounds very good to say this straight line fits within the error band. It falls within it and it

looks like a good fit.

But I think one also then has to know why one wants to do this in the first place and that, I would trust, is what Mr. Weidner is going to be talking about.

JUDGE COWAN: Mr. Paton, I am encouraged by what he just said to inquire whether your concern is related to the -- what I see as an open item to the SSER in regard to the analysis of the differential pressures and so forth. Is that what is concerning you?

MR. PATON: The Staff has concerns with the use of the straight line and the structural analysis. Mr. Kane will testify that he does not think it is appropriate.

JUDGE COWAN: And that essentially is reflected in what I read in the SSER?

MR. PATON: That's correct.

JUDGE COWAN: Where there is an outstanding disagreement in regard to the structural analysis because of whether the building is really rigid or not.

MR. PATON: That's correct.

MR. STEPTOE: Judge Bechhoefer, if I resume to give you a preview of what Mr. Weidner will say, we have used the word "straight line" throughout to describe this beaux black line which following the

10399

describe this heavy black line which falls within the error band.

MR. Weidner will testify that that is not in fact a straight line drawn with a ruler but is a surface or line that comes out of the structural model beginning with the straight line and then through a number of interactions, coming -- using the model to attempt to come close to the measured values so that it may be curved slightly. It may not be as direct a straight line.

JUDGE COWAN: I hate to confirm anything but I laid a straight line on that and it is not exactly straight.

MR. STEPTOE: I will let Mr. Weidner -- when he gets up, I will do a brief direct examination to discuss how the line was derived at and for what purpose.

JUDGE HARBOUR: Before we leave that, I would just like to ask Dr. Peck, while he has it in front of him, would you say that the second measurement from the left is then an eighth of an inch of the calculated settlement? Is the calculated settlement within an

2	1	eighth of an inch of the measured settlement?
	2	THE WITNESS: The second one from the left is

Q

300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

Can you tell me from Figure C-12 on what date you switched to permanent benchmarks for this DG-16?

10401

· person

A The indication would be something like the 10th of September, although in fact, I think there was a period of transition or overlap.

Q Doesn't Figure C-12 show an adjustment before the switch to permanent benchmarks was made?

A Yes.

Q Can you explain why that adjustment was made? A I don't recall the details of the tabulated information. Now what I used when I made this plot, the tabulated points were the ones that gave the uncorrected curve. And I would think, trying to reconstruct now, how I did this, that the change in the benchmark, would have occurred to coincide with that break. But as I recall, there were some gaps and overlap in the data and I don't remember why that happened. There may be some enlightenment in Mr. Lenzini's interpretation of that.

JUDGE HARBOUR: There were several curves on Figure C-12, and I would like, for the record, to show which curve we were just discussing.

> THE WITNESS: The curve for DG-16. BY MR. PATON:

Dr. Peck, have you completed your answer or are

3-7-4

1

A No, I haven't. Mr. Lenzini's plot, which is on Figure A-39, would indicate that there is a gap in the middle of August or slightly thereafter which is at about the same position as the little line marked with a small b on my Figure C-12, and then thereafter, there is a reduction of data near the end of August at which time I would presume we are back to the permanent reference points. So unless I were to see some indication in the charts that I used, this triangle may be misplotted. It may be that it does belong to somewhere near the end of August or sometime early in

10402

I have a recollection and I would say it is vague, that the tabular data that I used had somewhere a general statement about a date of transfer of reference points which may have been supposed to represent the period of transition rather than a specific date.

3-8-1 CHAIRMAN BECHHOEFER: Mr. Paton, we are going date 1 to want to take a morning break very shortly. Would it 2 be useful for you to have Dr. Peck try to find that 3 4 reference during the break? 5 MR. PATON: We are satisfied with his answer 300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345 6 but we may -- I don't think it is necessary to put it 7 on the record. We may discuss it with him on the break 8 but we are satisfied with that answer. 9 CHAIRMAN BECHHOEFER: All right, fine. 10 MR. PATON: I have one more which I can either 11 do now or later. 12 CHAIRMAN BECHHOEFER: You can do it now. 13 BY MR. PATON: 14 Dr. Peck, the last question I have for you Q 15 concerns the matter that you discussed with Mr. Kane. 16 I woll just try 16 and see what happens. 17 CHAIRMAN BECHHOEFER: Perhaps we could 18 introduce this as 16, but you might want to check --19 MR. PATON: It will be Staff Exhibit 16. 20 Dr. Peck, do you have before you a drawing 21 that shows the settlement history of Marker DG-3 after 22 September 14, 1979? 23 THE WITNESS: Yes sir. 24 MR. PATON: Mr. Chairman, we obtained this 25 drawing from the Applicant and I would ask -- well I will

10403

3-8-2		10404				
	1	offer it into evidence as Staff Exhibit 16 and I have				
•	2	shown copies to the Intervenors, also.				
	3	MR. MILLER: We have no objection.				
•	4	CHAIRMAN BECHHOEFER: Was this applied in				
345	5	response to a Staff request?				
) 554-2	6	MR. PATON: I would have to ask Mr. Kane. I				
1 (202	7 think the answer is yes, it was not is that					
2002	8	correct?				
L REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345	9	MR. KANE: It was a verbal informal request.				
NGTO	10	MR. PATON: It was given to us by the Applicant.				
VASHI	11	CHAIRMAN BECHHOEFER: All right. Absent any				
ING, V	12	objection, the Board will accept Staff Exhibit 16 into				
BUILD	13	evidence.				
TERS	14	(The document referred to,				
REPOR	15	previously marked Staff				
	16	Exhibit No. 16 for				
300 7TH STREET, S.W.	17	identification, was received				
H STF	18	in evidence.)				
300.71	19	MR. PATON: Thank you, Mr. Chairman, I am				
	20	handing to the reporter the copies of this exhibit.				
	21	CHAIRMAN BECHHOEFER: Off the record.				
	22	(Discussion had off the				
-	23	record.)				
	24	BY MR. PATON:				
-	25	Q Dr. Peck, you had had a chance to look at that				

drawing before you took the stand today; is that 1 2 correct? 3 That's correct. A Do you recognize the curve on the drawing as 4 0 5 the settlement history for Marker DG-3 -- let me stop 300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345 6 there. 7 A Yes sir. 8 All right. Do you also recognize the curve, 0 9 this curve as an extension of the information reflected 10 on Figure C-20 of your testimony? 11 Not exactly. Figure C-20 is a similar curve A 12 which is the average for all the perimeter i grence 13 points; whereas, your exhibit is for a specific 14 reference point, but they are with that limitation, 15 telling the same story. 16 Q Do you have an opinion as to whether the slope 17 on the curve shown on Staff Exhibit 16 is steeper than 18 the slope shown on Figure C-20 between 100 and 200 days? 19 Well one has to make an allowance for a couple A 20 of things. The scales are different. And since 21 Exhibit 16 is for DG-3, which is one of the monitors 22 that shows the maximum settlement, you would expect the 23 slope to be greater than that for the average of all the 24 settlement points, so that this is a little bit like 25 comparing apples and oranges.

25

Q This is the information I think you have agreed to take a more careful look at and to supply the results of your analysis to the Staff; is that correct?

10406

A Yes, that's correct.

MR. MILLER: Judge Bechhoefer, I would just like to state for the record that the results of Dr. Peck's analysis, that this data will be provided to the Board and the other parties, when it is provided to the NRC Staff.

I would hope that within a reasonable time frame, after the information is submitted to the Staff, it will indicate its concurrence or lack thereof with whatever conclusions are reached by Dr. Peck.

In the event that Dr. Peck's conclusions are, upon careful analysis, there's nothing in this later settlement data that would cause him to reach any different conclusion than the ones expressed in his testimony, and if the Staff thereafter agrees with his supplementary conclusion, I would hope that we could leave it with the Board on the basis of the written submissions and not require further evidentiary hearings on this rather limited subject.

Of course, if the data turns out to show something different or inconsistent with Dr. Peck's conclusions, that's a different set of facts and we have to consider at that point where such evidentiary hearing, further analytical work is required. ALDERSON REPORTING COMPANY, INC.

23

24

25

MR. PATON: I certainly agree with Mr. Miller. I think that if there's nothing significant about the information, then I agree with Mr. Miller.

CHAIRMAN BECHHOEFER: When we take a break, I would like Dr. Peck to compare that new information with Figure 825. Perhaps he could give us some conclusion, whether he thinks that data is consistent.

JUDGE HARBOUR: And for clarification, I would like to know the location of marker DG3 in Figure A-14 in Dr. Peck's testimony, the DG3 is shown as the southeast corner of the building on the diagram itself, DG3 is shown as being in the second bay from the -- excuse me, I'm sorry, I apologize, retract my statements. It is shown the same place on both. I was confusing an eight and a three.

CHAIRMAN BECHHOEFER: Did you have further questions at this time?

MR. PATON: That is all the questions the Staff has.

20 CHAIRMAN BECHHOEFER: After the break, Dr. Peck,
21 you may want to compare those two figures. We will take a
22 15-minute break now.

CHAIRMAN BECHHOEFER: Back on the record.

I think Dr. Cowan will lead off.

EXAMINATION BY THE BOARD

BY JUDGE COWAN :

0 Mr. Peck, in comparing Staff Exhibit 16 with Figure C-20, which we were doing just before the break, I have a little problem with the abscissa plot between 100 and 200 hours and the other -- days, and in the other case I see a plot between 1,000 and 2,000 days.

12 Is there a mislabeling of the abscissa on this? 13 No. Figure C-20 takes us up to the end of the A 14 surcharge period, which was on the order of 250 days or so. 15 And, as I understand it, the Staff's Exhibit 16 picks up 16 after removal of the surcharge, and we're now -- and that 17 brings us up to date, and we are now a couple thousand days after the beginning of the surcharge program.

19 So there is actually a gap in time between the 20 end of my Exhibit C-20 and the beginning of Staff's Exhibit 21 16.

22 So we are not then comparing the slope on Staff 0 23 Exhibit 16 between 1,000 and 2,000 hours with the shope 24 shown on C-20, between 100 and 200 hours?

25

A

These are days.

	1	Q Days. Excuse me.
	2	A Well; we are in the sense that the slope of the
S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345	3	secondary curve while the surcharge was acting is the basis
	4	for predicting what this secondary slope might be well
	5	into the future. So we are out in the future now when we
554-23	6	are in the neighborhood of a couple thousand days.
(202)	7	Q I understand that. My problem is there seemed to
20024	8	be a question that it was comparing the slope shown on
I, D.C.	9	Exhibit 16 with some slope C-20.
NOTON	10	A A better comparison was the one that Judge
ASHIN	11	Bechhoefer pointed out on Figure 825, which actually refers
NG, W	12	to DG3.
IUILDI	13	If we compare that slope with the one on Stafff
ERS B	14	Exhibit 16, now, this is the question that we're now looking
EPORT	15	at.
W. , R	16	(Discussion had off the
	17	record.)
H STR	18	BY JUDGE COWAN:
300 7TH STREET,	19	Q So the ordinate, as labeled, is it correct our
~	20	attention should be directed to this 825 so as to be com-
	21	paring slopes that apply to the same time period?
	22	A Yes, sir.
	23	BY CHAIRMAN BECHHOEFER:
	24	Q How do you compare those slopes?
	25	A You translate the slope into inches of settlement

10409

1

5

6

7

9

10

11

12

13

14

15

16

per log cycle. On Figure 825 it's something in the order 2 of an inch and a quarter per log cycle. And the slope that 3 you see on Staff Exhibit 16 appears to be steeper than that --4 it is steeper than that, but that's a complication in that during this period of the steep slope we have had the extensive lowering of the water table. So there are two settlements in this calculated -- in this spotted settlement, 8 the secondary settlement due to ground water lowering.

And what I'm proposing to do is to compare those slopes or settlements at times when the ground water lowering was the same at different dates. That way we can sort out secondary settlement, which is what is shown on Figure 25, from the addition associated with the ground water lowering.

(Discussion had off the

record.)

BY CHAIRMAN BECHHOEFER:

Dr. Peck, I'd like you to answer a question 0 about a hypothetical right now.

20 If you put back the surcharge in the building 21 right now so that the static load were as high as the 22 highest -- the highest load that the surcharge had on it, 23 what would the settlement look like? Would you get any 24 sort of an episode of some sort?

25

A

Yes, there would be settlement which would be

essentially elastic now, and it would occur almost directly in proportion to the amount of surcharge, and then there would be continuous settlement with time, presumably along the same log time relationship that was established the first time. The amount of that elastic settlement would probably be on the order of the elastic rebound that we saw when they took the surcharge off, which was something a little more than a quarter, or say a third of an inch, and that's about what I'd expect to happen again when you put the surcharge on.

4-2,pj1

on.

Q Well, carrying this over to what actually is going to happen, would the beginning of the live load, which means the beginning of some vibrations and putting the plant into operation -- I'm not talking now about the completion of the building, which is already there, but the new live load which will start when the plant starts operating -- will that produce a similar effect?

10412

Because I sort of recall that you equated the surcharge with the maximum live load that would occur, that the surcharge at least envelops that.

A Well, the surcharge certainly envelops it. It's considerably larger, I think, then the sum of the dead loads and live loads as it produces stresses at all depths that are at least that large. So the surface load is considerably larger per unit of area.

So I think what would happen if we assume -- and this is hypothetical, again -- if we assume that the live load is, say, five percent of the deadload,.

then the application of that live load over and above any loads that are in the building right now shouldn't produce more than five percent of that three-tenths of an inch, or whatever the elastic settlement was going to be, would be very small.

Q I see. So we would not assume -- well, should we assume for conservatism that the live loads plus

existing static load will equal the greatest amount of the surcharge?

A Well, I think that we don't really need -Q I thought you made that assumption at one point,
and I was just trying to see what kind of an episode would
be created when the plant starts operating.

A The surcharge was arranged so that at all points within the depths of the plant fill the stresses under the surcharge would be at least equal to those produced by the deadload of the structure and the live load.

In order to accomplish that at depth, at the bottom of the fill, we have to have much higher stresses near the surface. So that, in fact, the only portion of the fill that would be subjected to stresses close to those actually equal to the deadload of the building plus the live load would be very near the bottom of the fill, whereas the seat of settlement, of course, is throughout the fill and largely near the top.

So the surcharge program was extremely conservative in that respect. And most depths, the stresses applied by the surcharge are considerably in excess of the stresses associated with the deadload and live load.

BY CHAIRMAN BECHHOEFER:

Q Let me ask you. You have either recommended or stated that there will be monitoring. Would you suggest that readings be taken at about the time the live load is commenced or shortly thereafter?

A I believe that they are already being taken and I think in a fair proportion, a live load is already on the structure, if I understand correctly. That is, the --

Q Well I was talking about the operation of the live load. The dynamic load, I had been told, is the correct term.

A Yes, and as I say, I think the observations are already being made, key observations in this respect, are the continuation of the deep borros anchor points, for example, and they should be made at some predetermined schedule plus any other time when something new happens until the behavior of the building is well established.

Q Does the live load include the weight of the diesel generator or equipment or machinery?

A That is in the live load that's -- let's say, I call the live load plus dead load.

Q And that is installed in the structure now? A I understand that is so, at least practically all.

300 7TH STREET, S.W.

Q My next series of questions you will have to understand that I am a layman for these. I have seen that when the log time there is used, you essentially get a smooth line or maybe not precisely straight, but when the real time scales are used, you get these episodes and in predicting the future or -- shouldn't you -- you can correct me if I am wrong instead of trying to draw a line through some sort of an average, shouldn't the bottom of the episode be used to predict future settlement or were they? Th..t's what I don't understand.

A Well to start with, the same episodes should show on both the arithmetic and the log of the plots. They look different because of the peculiar way the time schedule is shortened. But, they are there and they are recognizable even though the form is different.

The procedure that has been used for forecasting the settlement has been to say that that portion of it which arises from the secondary consolidation will follow the straight line on the semi-log plot.

In addition to those settlements, if there are some loads applied that will now produce essentially elastic movements, one should add those in and this has been done in the sense that the settlements due to dewatering, for example, have been added to the

settlements that were predicted on the basis of the log time curve.

10416

So I think we are properly conservative in that respect.

Furthermore, of course, the projection of the semi-log time plot is based on a time when the surcharge was acting and as discussed a liftle while ago, at most depths. The stress in the soil now is less than when the surcharge is acting. So this projected time settlement curve with surcharge should itself be an upper bound for the settlement associated with the secondary portion of the process.

Q Now in determining that slope, I know you have testified as to the unreliability of preconsolidation data. But does this mean that you were starting on an assumption that the beginning of your measurements on zero, and the slope starts from there, or does your slope take into account some possible settlement which may have occurred before most of the instruments for measuring it were installed? And would this affect the shape of the slope, I guess the term is?

A When the surcharge itself was put on, there
was a considerable settlement. That part we call
primary which was associated with squeezing water out
of the voids, of the clay until all of the excess poor

300 7TH STREET,

pressures dissipated.

That part of the settlement, of course, occurred under the surcharge. And if we never come back and put a bigger load on and the surcharge is reduced, that sort of settlement would occur again.

10417

As the surch, je sat there and the primary settlement took place, we then got on to the straight line curve and the forecast for settlement started at a time when we knew what the settlements were by measurement and then extrapolated on the basis of the straight line semi-log curve.

The rate of settlement in the future with respect to log time is really independent at this stage as to how much settlement took place before. So it is not part of the forecast. 5-2,pj1

BY CHAIRMAN BECHHOEFER:

Q Wouldn't the settlement, due to the surcharge have taken place in any event, although just over a longer period of time if the building had just been built and then allowed to operate? Didn't the surcharge just speed up what otherwise would have happened?

A Yes, that's right.

Q Then shouldn't the starting point be a point somewhat higher than actual measurements taken there before the surcharge or after the surcharge might -- shouldn't the starting point be what the ground level was before anybody put anything on it? And doesn't that affect the slope or could it affect the slope?

A No, the slope that we actually get our measurement, which is the basis for our forecast, might have been different had we done something differently, put on a different surcharge or built the building without a surcharge, we would have gotten different slopes, but --

A That really wasn't my question. Wouldn't you have gotten a different slope if your starting point were, shall we say, glound zero, which is what it was before anybody put anything on it, and if youustarted from that point on?

Even though you don't have an actual measurement of it, you could perhaps make some assumptions as to how

10419

	1	much of it settled before you started measuring. If you
S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345	2	started way up somewhat higher and, I can't tell you how
	3	much, but
	4	(Discussion had off the
	5	record.)
	6	Q I'm talking about the absolute amount of settle-
1 (202)	7	ment over the life of the plant and starting at the point
20034	8	where it was before anybody put anything on the ground.
ASHINGTON, D.C.	9	A Yes, that is, from the day that the mud mat
	10	was poured, for example, and the mud mat started to
	11	settle, there were movements going on and as the building
ING, V	12	was built, then these movements became then the settlement
BUILD	13	of the building. A considerably part of that had occurred
FERS I	14	before we put the surcharge on. More occurred after-
EPOR	15	wards.
.W. , R	16	Since though at this time we are interested in
	17	what is going to happen from now on, at least that is one
H STR	18	of our interests, one cannot distinguish between the pri-
300 7TH STREET	19	mary and secondary portions of the settlement while they

17 what is going to happen from now on, at least that is one 18 of our interests, one cannot distinguish between the pri-19 mary and secondary portions of the settlement while they 20 are both going on simultaneously. So after the primary 21 disappeared, we get onto t. straight line plot that we 22 could use for forecasting.

23 What I am wondering is, if you start at a higher Q 24 point, would your line run out into the future instead of 25 showing three inches of settlement, show five or six

5-2,pj3

1

2

3

4

5

6

7

8

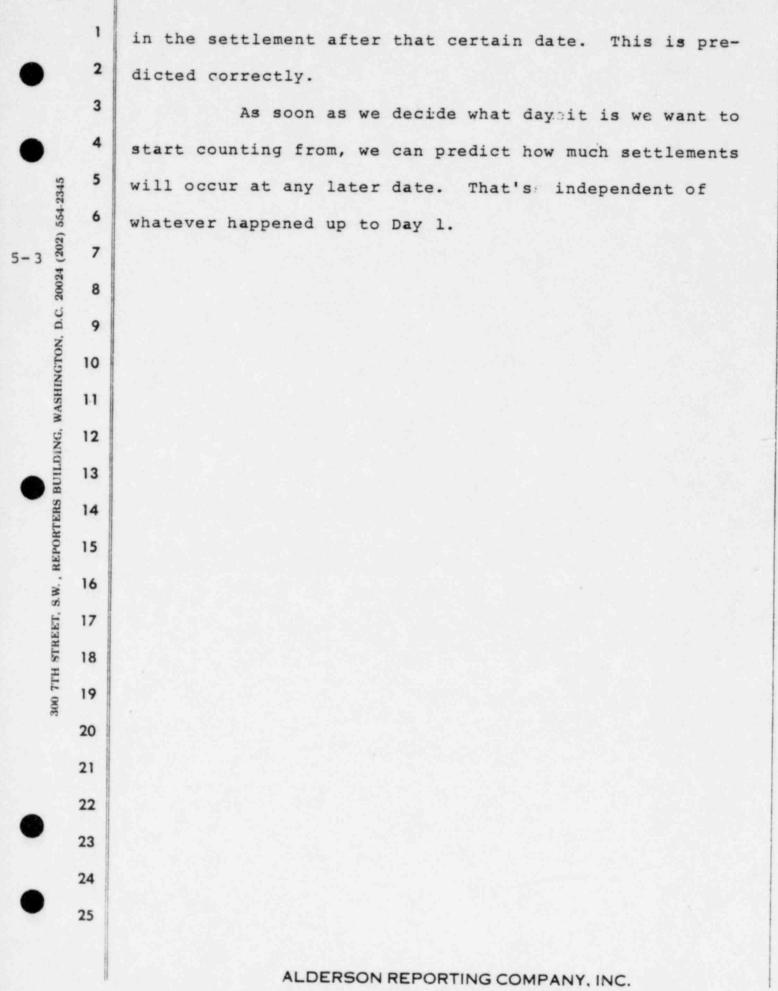

10420

300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

inches of settlement? I have not tried to throw out anything like that but if you start with a higher starting point and you get down to the same level, using your connecting points, your plotting points, the slope after the surcharge, wouldn't a somewhat greater angle produce more settlement in the end? And again, I am a complete layman and that's why I'm not sure I am not oversimplying something.

A No, I think what happens is that after we have
gone through over the physical things that happened, put
on the fill, we built the new structure, we put on the
surcharge and we waited until we got on the straignt line
curve, all the things that happened before that represents
settlement, included some settlement of the structure which
is there and which, I'd say, the structure has had to step.

16 Arbitrarily, the day the fill went on was called 17 When we got to the secondary portion at some day one. 18 later date, from then on, in order to predict settlement, 19 all we have to do is take off of that curve whatever num-20 ber of days after day one we want to call our initial 21 date and we picked and made certain of the day I think the 22 plant was virtually completed or went into operation. I 23 don't remember -- we were talking about a 40-year life and 24 we said, starting as of a certain day is when we will 25 begin to talk about the 40-year life. We are interested

23

24

25

300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

BY CHAIRMAN BECHHOEFER:

Well that's what I am trying to determine. Q I realize that in your methodology it is, but my real question is, primary consolidation is just an example of what would have occurred over a longer length of time.

If there had been all of these lengthy consolidations, shouldn't your Day 1 be two or three years before you actually started and wouldn't this, if you extended the line, show a greater settlement than if you started where you did start? That is what I am trying to figure out on whether --

> A I think I see.

My problem is, is three inches or whatever the 0 figure was -- it may not be three inches but I will say three inches -- is that realistic or, if we draw the line from what I call ground zero, would you get something more?

A No. I think you would not. What happens is That when the fill was placed originally, during this. replacement, some excess poor pressures developed, consolidation began and we saw, of course, that the building started to settle without apparent motivation.

But those excess pressures had dissipated before surcharge was put on. The piezometers showed that. Then we put the surcharge on and our really only

24

25

300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

interest in counting days, starting with the day the surcharge is on, is that we know what the shape of the time settlement curve looks like when you apply a load and the poor pressure dissipates, and we know that eventually at some time, you will find this break where you go from primary to secondary when the poor pressures are dissipated. And then from then on, we are on this straight curve that we can use.

10427

Now there is no magic in establishing Day 1 as of a certain date. We could as well have started counting days sometime when we decided we were on a straight line secondary curve, and from then on cut, the settlements will take place in accordance with that relationship.

Whatever settlement we had up to that point has happened and as part of the total settlement picture, that is part of the absolute settlement that has occurred. Whether it will occur in the future, secondary settlement would be determined by the slope of the curve from the date we want to start counting.

MR. MILLER: Judge Bechhoefer, perhaps if I might ask this one question, it may help, I don't know. Dr. Peck, could you describe for us the curve that is actually being met, the slope of which is being measured? Is it a curve that represents a line through

5-3-3 all of the points of settlement or set: only through 1 2 those points of settlement that occur after primary 3 consolidation has been accomplished? 4 JUDGE COWAN: I think that it is almost 5 exactly what he just said. 300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345 6 MR. MILLER: I think so but perhaps at this 7 point --8 THE WITNESS: You would like me to say it in a 9 more intelligible way. 10 MR. MILLER: Perhaps you could refer to a 11 diagram, one of the things --12 THE WITNESS: Yes, I think so. 827, I think 13 that may be a little simpler. 14 825 would be better because it is along the 15 The nearly complete settlement record from the plot. 16 time the surcharge was put on -- actually it isn't 17 complete because it starts at Page 10, you notice, and 18 this particular plot -- is represented by these 19 miscellaneous points that are not even connected by a 20 curve watil we get up to something like Day 75 or so. 21 During that period, for one thing, excess poor 22 pressures were being measured by the piezometers which 23 would tell us that there's primary settlement going on. 24 There's also secondary settlement going on but we can't

10424

tell one from the other. We couldn't use this part of

25

the curve, for example, to forecast anything unless we really worked out the rate of dissipation of the poor pressure.

But once we get pasteabout Day 90, there is a transition in the curve and we get on to what is certainly a straight segment. At that time, we have nothing but secondary consolidation going on and from that time on, then we could forecast what the settlement would be in the future, no matter what has happened before that.

300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

5-4,pj1

300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

1

that.

BY CHAIRMAN BECHHOEFER:

Well what I was trying to ascertain was whether, 2 0 since primary consolidation represents what would have 3 occurred through secondary consolidation, although over a 4 much longer period of time, should you start at either 5 point where you have zero up at the top, 10 up at the top 6 7 or even go back a few yars for that and maybe not try to draw those lines between zero and 70 but connect zero 8 9 directly with -- or zero directly with what occurs maybe at the 80 -- 80-day line, and shouldn't that be the 10 11 historical slope of secondary consolidation?

12 A If we knew what the secondary consolidation was 13 or had been back at Day 1 or Day 10 or Day minus 10, even 14 under the weight of the fill, we could establish that 15 relationship, we would find that after you subtracted 16 out the primary consolidation, you would be on the straight 17 line which would be the backward extension of the straight 18 line we are looking at.

But someday, some date, that we choose to start making the forecast from what is represented by a point on the point on the part of the curve that we know, then we can go forward from there.

Q Well, if preconsolidation pressures could be
ascertained, would that have enabled you to start earlier?
A No, and I am not quite clear why you would want

5-4,pj2

300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

1 to start it earlier.

Q Well, I would want to start earlier only if it made the slope more accurate and I would think maybe it would at least change the slope to some degree, and that is what I am trying to figure out.

A The only evidence we have that it wouldn't change
7 the slope is that after you get done with primary consolida8 tion, the slope stays constant. We really don't know how
9 primary and secondary are combined until the primary is
10 over.

11 JUDGE HARBOUR: Is that an empirical observation
12 that you are referring to?

13 THE WITNESS: That's right, that's right. The 14 theory tells us that me settlement doesn't stop but it 15 approaches a horizontal asynttote whereas we always find 16 that instead of approaching the horizontal line, we get a 17 straight line that has a slope. That difference between 18 the theory which doesn't take into account everything, 19 obviously and what we actually get, is what we call secon-20 dary consolidation. It is a fancy name for that part of 21 the consolidation process that we determined experimentally 22 instead of theoretically.

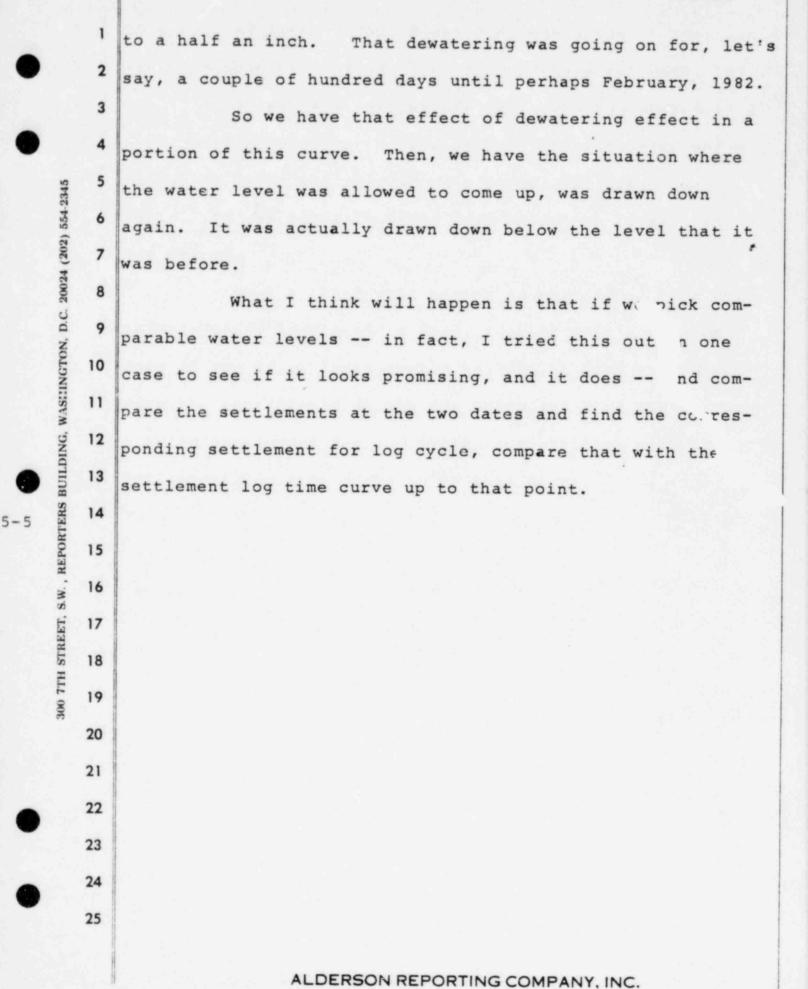

JUDGE HARBOUR: First of all, I want to ask if the Staff was going to ask Dr. Peck some more questions at this hearing about Staff Exhibit 16 concerning the

5-4,pj3

10428

	1	curvesthat is shown. Were you planning to ask some more
N, D.C. 20024 (202) 554-2345	2	questions coday?
	3	MR. PATON: No, we had completed our examination.
	4	Dr. Peck indicated that he was going to submit some addi-
	5	tional information but we have no more questions.
	6	(Discussion had off the
	7	record.)
	8	BY JUDGE HARBOUR:
	9	Q On Staff Exhibit 16 in the steep portion of the
NGTO	10	slope there, from in the vicinity of 800 to 1200 days, more
REPORTERS BUILDING, WASHINGTON, D.C.	11	than a thousand, I believe you described the steepness of
	12	that slope to dewatering; is that correct?
	13	A I think that is going to turn out to be the proper
	14	e xplanation.
	15	Q And therefore, you would predict that when that
S.W. , F	. 16	episode is completed, the settlement will return to the
	17	slope similar to that on A-25 which shows roughly one and
H STR	18	a quarter inches per loggcycle of time; is that correct?
300 7TH STREET,	19	A That's correct.
	20	Q Have you testified already as to the absolute
	21	amount of settlement which you believe will result from
	22	the dewatering?
	23	A I testified as to the amount that had resulted
	24	from the dewatering down to about elevation I think it
	25	is 595 and we know that that is something like a quarter

10429

1 There seems to be reasonable agreement about 2 the curves for which we have our data such as Staff 3 Exhibit 16, as you can see, has a great many points. 4 It is hard to distinguish among them. This is computer 5 plot and I don't distrust computers totally but I think 6 it is going to be desirable to plot this to an expanded 7 scale where we can identify the points to see what the 8 settlements actually were and perform this operation on 9 all the reference points and see what turns up.

10430

Q I suppose my question really is, would you care to predict the approximate future location of the inflection point on that curve as far as settlement is concerned?

A We are likely to get this scatter of points which makes it difficult to determine the curve until we stop changing the water levels --

Q Until you start changing the water levels?

A Yes. That is, when the permanent dewatering system goes in and we have what, from then on presumably, will be a fairly static situation. Then, I think we will return guickly to the normal secondary slope.

I hate to mention the subject of error in the scatter band, and so forth, but it's obvious that with these settlement points such as DG-3. we have that consideration. And I think our best information in beginning this study would be from the deep borros anchors, where we have less scatter.

10431

Q I guess I'm really trying to get you to predict the amount of settlement that's likely to occur as a result of dewatering.

MR. MILLER: Perhaps it would be helpful for the record, Dr. Harbour, if you could specify whether you're referring to effects of the permanent dewatering system or the dewatering system -- that the dewatering that is now taking place was a draw-down of the water table to levels that I believe are below those manticipated once the permanent system is in place, and perhaps Dr. Peck could share with you the diagram that he has in front of him which shows water level -- it's a continuation of Text Figure 6 in Dr. Peck's prepared testimony.

MS. STAMIRIS: What page does that follow, please?

MR. MILLER: I'm sorry; the text figure follows Page 79.

MS. STAMIRIS: Thank you.

300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

A The dewatering began to affect the water levels substantially sometime around, say, March 1981, and the amount of dewatering that occurred up until about February 1982 resulted in something like a quarter to a half-inch settlement. That's the average settlement, averaged in two ways, as you can see in the plot just below. The borros anchors have been used for one average and the regular settlement reference points for another.

When the water levels came back up, as they did in about June or July of 1982, there was detectable, I should say, in the -- particularly in the borros anchor data, a small rise, perhaps one or two-tenths of an inch. And then, as the water level went down again, we came back to additional settlement totally just about a half an inch, a little bit more than we had had before under the preceding dewatering.

Now, I think, for all practical purposes, the amount of settlement that might occur due to further dewatering below this level, if it should occur, will be in the near proportion to the increase in hyperstatic stress. So it's going to be a fraction of what we have seen occur before.

I think if the water level fluctuates up and

down over a 30 or 40 foot difference in elevation we will see a small but fairly consistent elastic rise and f.11, which -- of the ground surface, which occurs not so much on account of expansion and compression of the fill but of the whole column all the way down to bedrock surface, because all of this is compressible material; stiff, to be sure, but with a column of 200 or 300 feet high you can expect to get measurable movements.

MR. MILLER: Excuse me. If I might just interrupt one more time. Again, for the record, could you indicate the elevation of ground water table first on the last point on Text Figure 6, and then if you could tell us for the record what it shows on the document to which you were referring for a period of time subsequent to the last point on Text Figure 6.

THE WITNESS: What page was that?

MR. MILLER: It's right after Page 79, sir.

THE WITNESS: The last point on Text Figure 6 is, I would judge, in mid-August, and the last point on the more recent version of that figure brings us up to early November.

During that period we've had an additional
draw-down of porhaps 15 feet, which is 15 feet, roughly,
below any previous draw-down.

4	0	1	3	A
4	,U	4	3	-8

-2-1		10101
own	1	BY JUDGE HARBOUR:
•	2	Q That's a draw-down to Elevation 580 since then?
	3	A Yes.
•	4	BY CHAIRMAN BECHHOEFER:
345	5	Q Would that be approximately on that straight
20024 (202) 554-2345	6	line that or even lower the straight line that's
4 (202	7	underneath the line indicating the water levels?
	8	(Discussion had off the

Q Dr. Peck, I'd like to go back to some of Mr. Paton's questions on accuracy of the measurements. And, first, does the plus or minus in the optical level accuracy -- does the fact that during the period of time there were some transfers of readings -- does that affect that accuracy of the final results that come out of that?

I mean, does the process of transferring some of the reasons in itself add to the uncertainty of those readings?

A I should think that -- yes, that is a factor that enters into the uncertainties.

Q Would that make some of the readings less accurate than an eighth of an inch, for instance, plus or minus a sixteenth?of

A Well, I can't say flatly whether it would or not.

Q But it could, is that correct?

A Yes, I believe it could.

Q Now, if you made an assumption with respect to the plus or minus readings, and if the assumption were that the latest of your readings was as far minus as you could get and the first of your readings was as much plus as you could get, would that make a difference in

your final answer, your conclusion as to predicted settlement?

I'm trying to figure out the most error that we could get in your prediction.

10436

A I suppose we shouldn't really be talking about the most error we could get, because it's an oversimplification to be talking about plus or minus an eighth of an inch or plus or minus a sixteenth of an inch for an error band unless we really define what we're talking about.

In reality, the measurements that a surveyor makes, either when he is simply taking levels or when he is transferring reference points, as well, have a sort of a probablistic distribution, and the chances of being close to the value he measured are better than the chances that the real value is as far away as an eighth of an inch or so.

You can't draw an envelope and say no measured point can be outside of that envelope. It's a matter of probabilities, and there are procedures for analyzing these things that, in general, surveyors do use in adjusting their net works and level elevations, and so on.

And I think probably the best answer, then, would have to come from an analysis which the surveyor may or may not have made -- I don't know -- of what the error of distribution really might be. ALDERSON REPORTING COMPANY, INC.

10437

if one were,

be.	1	Q Well, what I'm trying to figure out is if one were
•	2	presumably, being conservative and assuming the worst could
	3	happen that was what I was trying to see what kind of
•	4	result would we get? Because often we are asked to be
345	5	conservative and to assume the worst even though the worst
20024 (202) 554-2345	6	won't happen, or even if the worst is not likely to happen.
(202)	7	That was where my question arose from.
		A Well, it's hard to define what the worst would be.
i. D.C.	9	In my view, certainly, this plus or minus an
WASHINGTON, D.C.	10	eighth of an inch that we talked about a little earlier,
ASHIN	11	I would say, is the worst that could happen, and it's prob-
		ably a pretty conservative thing.
BUILDING.	13	Q Right. So if the top reading were up an eighth
	14	and the bottom one were down an eighth, or maybe it should
REPORTERS	15	be a 16th, how would that affect your ultimate conclusion
S.W., RI	16	as to the amount of settlement, the secondary settlement to
ET, S.	17	be predicted? Or would it?

A Oh, it wouldn't.

19

0

18

300 7TH STREE

That's what I was trying to --

20 Yeah, I see. The prediction of settlement is A 21 based only on the slope of the secondary curve, and we 22 start with a point on that curve on a certain date and we 23 predict out to, say, 40 years.

24 That's independent of the actual elevation. That 25 is, the production which is based on the forecast does not

6-3,pj2

300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

1

10438

2	errors.
3	Q Well, if the slope started on, say, an eighth of
4	an inch or a 16th of an inch higher and ended an eighth or
5	a 16th of an inch lower, would the slope be enough different
6	to change anything?
7	A The initial difference or error, whatever you call
8	it, would carry through. So that at the end of 40 years,
9	if it was an eighth of an inch too high to start with, it
10	would, presumably, end up being an eighth of an inch too
11	high.
12	Q No; and too low to end up with is what I am trying
13	to
14	A Oh, no. No, the same point wouldn't start too
15	high and too low.
16	Q Well, that's what I was trying to if you figure
17	the error, at maximum whether that could happen. That's
18	what I was trying to drive at.
19	A No. I think, if there are errors, it would be
20	errors of initial elevation between successive points around
21	the building. That type of error would come into the
22	picture there.
23	CHAIRMAN BECHHOEFER: I see.
24	BY JUDGE COWAN:
25	Q Continuing along this same line, in trying to
	ALDERSON REPORTING COMPANY, INC.

1 evaluate the validity of your prediction of the expected 2 settlement, did you make any kind of an estimate of the 3 probable error or the 90 percent reliability, or of the 4 projection of this best line that you draw in this similar 5 plot -- did you make that kind of an evaluation? 6 A I didn't make a formal evaluation of that kind,

7 no.

8 I did look at the nature of the errors that might 9 be introduced in a graphical way. That was one of the 10 intents of my Figure C-18, in which the time settlement 11 curves -- this is to an arithmetic scale -- are plotted 12 for all the external reference points without any attempt 13 to correct across the gaps where reference points were 14 transferred. And what I was interested in looking at these 15 diagrams was the extent to which they were consistent, 16 whether there was cross-over, things of this sort. And I 17 think you can tell by looking at the figure that there is 18 a rather remarkable consistency among the shape and the 19 order of occurrence of these curves. But I didn't make a 20 formal probablistic analysis.

25

300 71'H STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

So, having known that in advance, the structure was started, settlement took place, and then it was decided that the best thing to do was to iron out the settlement by means of a surcharge.

Q Right. Would you consider the ground conditions under -- in that situation at least somewhat comparable to those we are confronting at Midland?

A No, I would say there was a very considerable difference. The ground conditions at the former site consisted of material largely above the water table, largely cohesionless, whereas we are at Midland primarily below water table and dealing to a large extent with clay soils. So that in detail the soil characteristics are quite different.

Q So that what you're in essence saying is that the surcharge program at Midland was -- is a first attempt, really, at accomplishing what you're trying to accomplish under conditions which are comparable?

A I suppose you could say that. There's simply, as far as I know, is no precedent for all the

1 combination of circumstances we have here, so the precedents that I drew were representative of various aspects of this job.

4 Now, yesterday we had considerable discussion Q 5 about three-quarters of an inch of differential 6 settlement, and I wanted to ask, isn't the more 7 realistic figures -- I guess it's not too different, 8 but .83 inches, as appears on Figure -- as, at least, 9 I read Figure 8 to state? 10 MS. SINCLAIR: Where is Figure 8? 11 Where is that figure? 12 CHAIRMAN BECHHOEFER: Text Figure 8. 13 JUDGE HARBOUR: Just before Page 80. 14 THE WITNESS: .83 was your number? 15 CHAIRMAN BECHHOEFER: Yes. 16 BY ... THE WITNESS: 17 A Okay, that's right. 18 BY CHAIRMAN BECHHOEFER: Q Is that significantly different from threequarters of an inch to make any difference? Is it enough different from three-quarters to make any difference? No, I don't think so. A Is that the figure we really should be using 0 when we talk about differential settlement?

	6	BY MR. MILLER:
	7	Q Dr. Peck, would you describe the circumstances
2002	8	under which you prepared the figures that are found in
N, D.C	9	Appendix C of your testimony?
WASHINGTON, D.C.	10	A Yes. While the surcharge was in place, and
WASHI	11	shortly thereafter, I was of course receiving plots of
	12	settlements and piezometric observations from the project.
REPORTERS BUILDING,	13	Reviewing these records, reaching my general conclusions
TERS	14	about what they indicated whether it might be possible to
REPOR	15	move the surcharge, the extent to which primary consolida-
S.W. ,	16	tion was developing and things of this sort.
REET.	17	I had quite definite conclusions from my general
300 7TH STREET,	18	perusual of these pieces of information that were furnished
300 7	19	to me, but at the same time, I realized, and it was cer-
	20	tainly true, that questions were being raised about many of
	21	the records and my interpretation of the record.
	22	Those associated with the project knew that I was
	23	disregarding in some instances, data which I called aberrations
	24	and this sort of thing. So I decided in about November of
	25	1980, that it would be desirable for my own benefit to

300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

10445

settle down and go through all of the data, make my own 1 plot, combine on single plots -- I think for the first time 2 probably, the combined record of the history of the loading 3 4 for the surcharge, the water levels, the piezometric observations, corresponding settlements, so that I could get a 5 clearer picture of what was going on and I set down my con-6 clusions and thoughts at this time as a sort of a summary to 7 8 myself.

9 That's the origin of those figures. You can see
10 by the dates on them they were drawn in December or November,
11 1980, which is some little time actually before the last
12 time -- for the first time that I appeared here.

13 At the time I did appear here, incidently, and the 14 questions turned to technical matters, I testified with the background of this information but it wasn't in the direct 15 testimony, in the prepared testimony, and I think that some 16 17 of the discussions that we got into concerning how I treated data, which data I gave the most weight to, and so 18 forth, I didn't have the benefit of being eliminated by any 19 20 of the illustrations.

At any rate, those documents predated my last appearance here. Then as I think I have mentioned, in this hearing, having done this, and having recognized that there were some occasional gaps in the record such as transfers of reference points and the like, it seemed quite

BY MR. MILLER:

Q If we turn to Page 52 of your prepared testimony, Dr. Peck, yesterday you were examined regarding the termination of readings on piezometers, PZ-28 and PZ-38. Can you tell me, referring to Appendix A, why the readings were terminated? I direct your attention to Page A-8.

(Witness complying.)

A Yes, the text there which is MrscLenzinits, says that Piezometer 28 was destroyed 7 August 1979 and Piezometer 38 was destroyed 16, August, 1979.

Q Dr. Peck, could you describe for us briefly how the number of different piezometers, placed around the Diesel Generator Building were established? And more specifically, whether the number that was chosen attempted to take account of construction conditions and so on in the field?

A They were about three main considerations in the establishment of the piezometers and their number.

One was to have in any given location, several piezometers at different elevations where possible, generally about three. The purpose of this was to get some indication of whether the water that was being squeezed from the clay was flowingpupward or downward. In other words, to what extent the flow was comparable

to that in a more or less homogeneous material.

The second consideration was to cover sufficient areas to make sure that the information would be adequate for either determining on the average what was going on or in determining if in this extent, there were differences in the piezometric behavior beneath different parts of the building.

And thirdly, the group of piezometers were established at close enough spacing so that if a substantial number of them should be damaged and destroyed, there would be back-up information because the piezometers, it seems they are always being destroyed on a construction job. One can't help it so you put in more than you need.

The net result of all of this was a very large number of piezometers, larger than one would expect to have under most ordinary buildings but a sufficient number to take care of these eventualities.

Q Dr. Peck, yesterday you were examined by Ms. Sinclair from a document that was entitled "The Testimony of Harry Singh", concerning the Diesel Generator Building.

Ms. Sinclair directed your attention to a portion of that document that dealt with the crushing of the grains of particles of sand, Do you recall that

line of examination?

A Yes.

Q Do you recall the pressure expressed in tons per square foot that was found in that document as being a pressure sufficient in the author's estimation to crush the grains of sand?

10449

A I recall that at the maximum test pressure, which was 64 tons per square foot, that I believe Mr. Singh expected there could be some crushing of the sand grains. And I think he may have said that the crushing might have occurred at somewhat smaller pressure.

Q I see. Can you tell us by reference to your prepared testimony or otherwise, what the pressures are that will actually be experienced under the Diesel Generator Building at the Midland site?

A The pressures at the various elevations and locations are shown, for example, on Text Figure 4 which follows Page 76, and they are in the order of five to six kips per square foot which means two and a half to three tons per square foot.

Q Dr. Peck, based on your experience, would you expect any crushing of grains of sand to occur at the pressures to which you just testified?

I wouldn't say there couldn't be any, but I

REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

BY THE WITNESS:

A Yes. The term "correction factor" in most instances, was probably a misnomer. In order to extend the piezometric tubes, up through the fill as the height of the fill was increasing, sections of tubing had to be added. Every time a section of tubing was added, the measurements of piezometric level had to be made from the top of that tubing, a measuring device that was lowered down to the water surface and a distance below the top of the tube was required.

Every time there was a new length of tube added, there had to be a new elevation established for the top of that new tube. It became a new reference elevation, in effect.

And when a tube was added or taken off, then there was a change of six or seven or, four feet or so depending on the length of the tube. That had to be taken into account. Those lengths only became correction factors in case somebody perhaps forgot to write down they took off that tube. Otherwise, they are simply necessary adjustments in the reference levels.

BY MR. MILLER:

Q Thank you. In response today to questions from Chairman Bechhoefer, I believe you stated that if one looks at all the specific characteristics of the

surcharge program at Midland, having in mind both the soil characteristics and the fact that the building was under construction, I believe your words were that in essence, "the surcharge program at Midland was unprecedented". Do you recall that testimony, sir?

A Yes.

Q In your experience as a geotechnical engineer, what affect if any does the presence of a structure on a site to be surcharged have?

A The effect would depend certainly on the kind of structure and its rigidity and so on.

The presence of the structure would usually have a very little affect on the transmission of stresses into the subsoil associated with the surcharge.

If the structure is there first, it of course depends on the movement with the fill and if the fill were settled greatly differentially, then the structure would participate in that differential settlement and it would modify the settlement somewhat over -- in comparison to what it would have been had there been no structure.

There is very little affect, I would say, on the behavior of the subsoil, whether the structure exists or not. What happens to the structure, of course, depends on what kind of settlements actually

Q Thank you. Finally, Dr. Peck, you were questioned by Mr. Paton with respect to the function of a geotechnical engineer with respect to provisions of settlement measurements for use in a calculation of structural adequacy of that structure. Do you recall that interchange?

A Yes.

Q In your experience, Dr. Peck, is there any convention or protocol which would tell us what discipline, that is geotechnical engineering or structural engineering, should decide how soil settlement figures are to be used in calculation of structural adequacies of a structure?

A No. In my experience, I have come to a very strong belief, actually, that engineers tend to divide themselves into compartments that don't exist.

We draw boundaries sometimes between geotechnical engineers and structural engineers, civil engineers and geologists, and soil mechanics and rock mechanics and so on. These are not really well-defined boundaries.

If a soil is acted upon by a structure, the two have to act together. We speak quite properly of a soil structure interaction. And as far as I am concerned,

there has to be an interaction between the soil
 engineer, the foundation engineer and the structural
 engineer.

They should cross the boundaries, they shouldn't be there really in the first place. I really think structural engineers should know something about soils and soil engineers should know something about structures.

200 TTH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

7-3-4

structur	es	If they are subdivided in some organizational
•	2	fashion, then they should be in very intimitate communica-
	3	tion with each other and decide how they are going to
•	4	handle these interactions. But if, as far as I know, no
2345	5	identified, defined or agreed upon boundaries as to where
) 554-3	6	these responsibilities stop and start. There shouldn't be
4 (202	7	any such boundaries.
2002	8	MR. MILLER: Thank you, I have no further ques-
N, D.C	9	tions of Dr. Peck.
S.W. , REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345	10	CHAIRMAN BECHHOEFER: Miss Stamiris.
WASHI	11	RECROSS EXAMINATION
ING, 1	12	BY MS. STAMIRIS:
BUILE	13	Q Dr. Peck, in regard to what you are just saying
TERS	14	about the interaction between soil and structural engineers,
EPOR	15	does that coincide with what your practice was in this
S.W. , I	16	case between your expertise and the expertise of the struc-
	17	tural engineer?
300 7TH STREET	18	A I think so. I can hardly recall a meeting when
300 71	19	there weren't quite a few representatives, all of the
	20	disciplines that might be involved and participating.
	21	Q With reference to the figure from Mr. Weidner's
•	22	testimony and the discussion about straight lining that
-	23	data, if that data was received from the survey measurements
	24	as you indicated, doesn't that somehow seem to sidestep
-	25	the whole purpose of your geotechnical analysis if that

10455

300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

10456

1 kind of structural -- that kind of information upon which 2 a structural analysis is based could have been received 3 simply by surveying measurements, then what was the point 4 of this five-year study that we have been involved in on the 5 geotechnics of the soils in relationship to the Diesel 6 Generator Building?

7 A Well, there were more things to be considered with 8 respect to the building than just its shape as of a parti-9 cular time, which could be determined by the survey. That 10 was one of the milestones of the life of the building, you 11 might say, at which it was desirable to investigate the 12 capabilities, the structural capabilities of the building.

13 But, there will be movements in the future, for 14 example. There must be estimates of what the deformed shape 15 would be at some time in the future so that the state of 16 the building under those conditions can also be investi-17 gated. That of course couldn't be determined by just surveys. 18 Well, were you concerned with what was the worse 0 19 example of curvature that occurred in the Diesel Generator 20 Building as a result of the surcharge load?

21 MR. MILLER: I'm sorry, do we have a reference to 22 curvature?

MS. STAMIRIS: Or I will ask Dr. Peck if he is aware of whether curvature occurred in the walls of the Diesel Generator Building under the surcharge load?

4

300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

1	1000	THE	WITNESS:	I	pret	fer	to	call	it di	stortatio	ons
2	which	included	curvatur	es	and	may	be	some	other	changes	in
	geome										

BY MS. STAMIRIS:

9 Q And would the figures in your testimony that 9 indicated the most differential settlements between various 7 points along a wall, would that represent the same wall 8 that experienced the most curvature?

9 A The figures in the various drawings in this text
10 represent the positions of the structure at several dis11 crete points.

As I recall it, perhaps along the exterior walls--Q Could you direct me to a figure, please?

A I am looking at Text Figure 8 --

Q Thank you.

16 Which follows page 79. There are no points shown A 17 on the cross walls in this figure, for example, sl these 18 data would provide no information about the curvature or 19 distortation of those walls. And on the end walls, there 20 is one intermediate point, three points that don't define 21 a curve. They help to establish what the shape might have 22 been, but these points by no means would permit one to 23 determine the curvature of the cross walls and even very 24 much of the end walls.

25

0

All right. Did the surcharge load produce further

differential stresses on the building which resulted in cracking? By and large, I believe the surcharge loading A tended to close some of the cracks that existed, cracks that were caused by the hard spots that had been cut from 300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345 and freed from the building before surcharging. I am quite sure that some cracks may have opened, and I expect cracks tended to close.

10459

BY MS. STAMIRIS:

Q You are not aware of significant opening of cracks along particular walls indicating differential settlement?

MR. MILLER: Excuse me. I really have to object. I believe this is both beyond the scope of any cross-examination or redirect examination of Dr. Peck, and it is a subject that was explored by Mrs. Stamiris when Dr. Peck was here over a year ago.

MS. STAMIRIS: I don't think I ever talked to him about stress on the building, and until he just made the statement that he did about the interconnection between the two sciences or fields I did not pursue it because I thought we were trying to create a distinct division or separation between those.

I want to end up by asking him about, the effects of that on the analysis of the soils underneath the building and to what degree if the building cracked and gave; in other words, it did not act as a rigid structure but, indeed gave way to certain degrees under the surcharge load, whether that kind of phenomenon was experienced, and, if so, taken into account in his analysis.

(Discussion had off the record.)

CHAIRMAN BECHHOEFER: Yes, that's all right. The witness may answer the question you had.

MS. STAMIRIS: I wasn't sure from Dr. Peck's answer whether, indeed, such cracking did occur which indicated that the building might have been acting as a not so rigid structure.

BY THE WITNESS:

A To begin with, although this is, relatively speaking, among most structures a quite rigid one, it isn't, of course, a rigid structure.

It did experience some cracking, particularly before the surcharge was applied. The change in rigidity of the structure associated with the cracking, if even measurable at all, certainly had no significance with respect to the transmission of the surcharge load to the subsoil.

Their structure being a box containing compartments in which the fill could be placed was of such a geometry that the fill load could be applied to a very large extent either through the walls of the structure and the footing or the intervening spaces directly to the soil that the stiffness of the structure could have no significant effect on the distribution of pressures in the underlying materials produced by the surcharge. It wouldn't have made any difference, even

1

10461

10

11

12

13

14

15

16

17

18

19

20

21

22

23

A

if there had been some modification of the pressure from 2 the surcharge as a result of the stiffness of the 3 building, because the -- for two reasons: The margin near 4 the ground surface of pressure associated with surcharge 5 over that which would be exerted by the building was so 6 great that there would be ample prestress in the upper 7 levels under any circumstances. And the deeper one goes 8 in the subsoil the less effect on the stress distribution 9 the stiffness of the structure on the surface actually has.

So I took it into account, but my accounting said that it was of no significance.

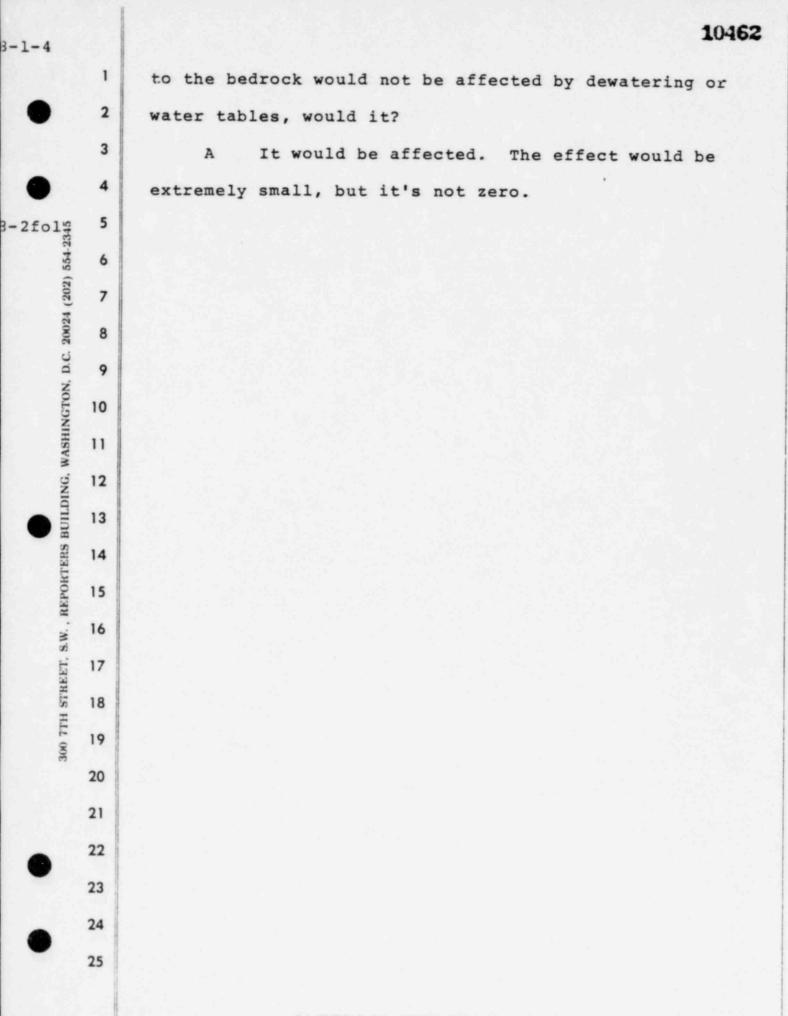

BY MS. STAMIRIS:

When we were speaking about -- when Mr. Paton 0 was asking questions and there was some discussion on the effects of dewatering, I believe you said that as the water levels would go up and down that there would be a very slight change in the surface level of the soil. Did you make such a statement?

Yes, I think so.

In response to those water levels? 0 A Yes.

And you mentioned something about a compressible 0 24 column all the way down to the bedrock. Now, did you 25 mean that -- I mean, this type of a column all the way down

300 77H STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

13

19

1

zero.

Okay.

0

A I hope I didn't mislead anybody by the use of the
term column, because what I'm thinking of is an extensive
mass of the stiff soil above which we have the mass of fill
or natural soil in which the water level fluctuates.

1046

6 That changes the stress all the way from the zone
7 of the water table where the fluctuations occur clear down
8 to and even through into the bedrock. Because we have a
9 quite thick mass, several hundred feet as glacial till,
10 even very small stresses producing very small strains can
11 over that great thickness produce an undoubtedly measurable
12 settlement or rise as the water tables vary.

It's an elastic response, essentially.

JUDGE HARBOUR: Is that due just simply to the weight of the material primarily, of the water, the mass of water?

THE WITNESS: Yes, it is due to the change in
bouyancy in the upper layers.

BY MS. STAMIRIS:

20 Q Do you think that there would be a probability 21 that a dewatering system drawing water up could affect 22 water from a lower aquifer?

23 MR. MILLER: I'm going to object. I really think 24 that's well beyond the scope of any cross examination or 25 my redirect.

•

•

	이 이렇지 않는 것 같아. 이는 것 같아. 이는 것 같아. 이는 것 같아. 이는 것 이야지 않는 것 같아. 이는 이 이 이는 것 않아. 이 이 이 이 이 이 이 이 이
1	MS. STAMIRIS: If it makes any difference, that's
2	the only question I'm going to ask on that subject. I'm not
3	leading into a series, but I would like an opinion on that.
4	(Discussion had off the
5	record.)
6	CHAIRMAN BECHHOEFER: I think we'll let him answer
7	it.
3	THE WITNESS: I'm going to have to ask Miss
,	Stamiris to repeat it, but I would like to make an addition
)	
	to the answer to your question, if I might.
2	The difference is indeed due to the weight of the
	water, but in soil mechanics parlance, at least, since it
	is the intergranular stress or the effective stress that
	actually produces or reduces settlement that it is the
	bouyant effect on this upper material that establishes the
	stress in the soil skeleton that produces the settlement.
1	It isn't quite as direct as just adding six feet
3	of water on top of a column of soil.
2	Now, I'm sorry, Mrs. Stamiris, I lost it.
0	BY MS. STAMIRIS:
1	Q Dr. Peck, can you answer in a general sense,
2	based on your knowledge of ground water patterns in relation-
3	ship to ground water systems, whether dewatering could
	there would be a probability of a dewatering system drawing
5	water up from a lower acquifer and the interaction between
	water op riom a rower acquirer and the interaction between

14

15

16

1 different aquifers and water systems?

A Again -- and I think I have to answer this as you
suggested, in generalities -- there would be an effect and
it would be so small that you couldn't measure it.

9 Thank you. Dr. Peck, I believe that you said that 9 you would be able -- when you analyzed more precisely the 7 data representing that in Staff Exhibit 16 that we would be 8 in a better -- or you would be in a better position when the 9 permanent dewatering system goes into effect to see what the 10 actual long term effects would be.

Is it your understanding that the dewatering -how does the dewatering that's going on now differ from what
you expect the permanent dewatering to be?

A I don't think you understood the answer in the way I intended it, at least, to that first statement.

Q No.

17 A The effects of the dewatering that may be incor18 porated in this diagram, in effect, masks the secondary
19 settlement they were interested in evaluating. And if I was
20 talking about effects of dewatering, it wasn't effects on
21 the subsoil of the structure or anything of that sort but
22 simply on our ability to sort out these two aspects of
23 settlement.

Q Well, I did understand it the way that you intended it, but I want to ask you how the dewatering that is going on now will differ from the dewatering that is expected in the future.

10455

As I understand it, the dewatering that is A going on now, which is presently directed towards construction dewatering in preparation for underpinning and things of this sort, would be accomplished certainly in those areas where the construction operations would be needed, although, as I understand it, part of the permanent dewatering system is being used in this temporary capacity. Ultimately there will be a permanent system operating continuously that will keep the water level at a constant elevation in different parts of the plant, different elevations in different parts, but it won't be fluctuating.very much, whereas now there may be zones that are locally dewatered, the water level under the permanent devatering system may actually rise a little higher than has been drawn down to at present.

So there are variations to be expected during the construction period, and after the permanent system goes into operation there would be fewer such variations, there should be an equilibrium sort of system.

JUDGE HARBOUR: But, Mrs. Stamiris, do you mean in respect to the plant or in respect to the Diesel

1 Generator	Building?
-------------	-----------

MS. STAMIRIS: Well, I thought if it was more 2 uniform over the whole plant site. I didn't know there 3 were variations.

BY MS. STAMIRIS:

I suppose I should ask in relation to the Q Diesel Generator Building, in view of your response.

I think the general statement would still be A applicable to the Diesel Generator Building. That is, until the permanent dewatering system goes into routine operation there are likely to be some variations in water level beneath the Diesel Generator Building, and there would be, prejumably, none or fewer thereafter.

Do you know what the ground water level is 0 now at the Diesel Generator Building?

It should be the elevation that we see on this A drawing of the dewatering settlement on construction activities at the Diesel Generator Building. As of mid-October it was about Elevation 582, and I believe it is maybe a little bit lower now. I don't know exactly.

21 Thank you. In separating out the effects of 0 22 dewatering from the secondary consolidation which you 23 are going to attempt to do when you review this data on 24 Staff Exhibit 16, do you expect there to be long term 25 effects due to dewatering that will be need to separated

out from the secondary consolidation?

I don't believe there will be long term A effects that will be of significance or that will affect the predictions of settlement.

Okay. You did -- do I remember correctly that 0 you indicated that you expect the curve that is dropping on Staff Exhibit 16 -- you expect that it will rebound and then follow a different line of settlement, or the ground water level will follow a different curve?

I think we will see a better defined curve A because this is, obviously, hardly a curve but a collection of spots, so that it's hard to make an interpretation at the moment.

Q Okay. With regard to your overall analysis of the geotechnical results of the surcharge at the Diesel Generator Building, were you applying what I, for lack of a better word, will call your usual engineering standards?

19 I mean, did you use the same standards that you would use in any structural soil interaction situation?

22 A I think I can say I used standards that were 23 appropriate to the project. That is, this depends on 24 how you define standards.

I used the knowledge and information that I had

13

14

16

17

18

Q So, then, if this building had not been a nuclear 2 plant at a nuclear -- I mean, a building at a nuclear plant, would your standards have been less conservative? 3

4 I expect that they would not have been less con-A 5 servative with respect to, perhaps, a number of other loca-6 tions where the building might have existed. This would 7 depend on the needs of the project. If it were a foundation 8 for a power plant on a hydro project, for example, I cer-9 tainly would apply, I think, equally stringent standards.

10 0 Okay. I believe that you said that even under a 11 1.5 SSE or earthquake factor that you would expect no ques-12 tion of sand, is that correct?

> Well, you said virtually no pressure --A Virtually no.

15 -- of sand prticles. But in response to an Q earlier question by me you said that you didn't analyze any earthquake factors, and so I wondered if those two statements are inconsistent in your mind?

19 No, I don't think so. Even if you were to ask A 20 me from scratch if I would expect it under the circumstances, 21 my opinion right off the cuff would be I wouldn't expect it.

22 0 Oh, I see. So then your opinion that you would not 23 expect any significant question of sand particles was an 24 off the cuff reaction as opposed to an analysis based on 25 some specific data?

	1	A Yes, I think that's right; off the cuff meaning I
	2	relied on my experience and not without any background.
	3	Q And did you coordinate your efforts with Dr.
	4	Hendron's assessment of the seismic shakedown capacity that
2345	5	would be likely well, no, I'll skip that question.
2) 554-	6	Can you tell me briefly on what you based your
20024 (202) 554-2345	7	conclusion that secondary consolidation was achieved under
		the surcharge of the Diesel Generator Building?
ON, D.	9	MR. MILLER: Judge Bechhoefer, I have to object.
INGTO	10	This is the substance of Dr. Peck's prepared testimony and
WASH	11	all the cross examination we went through yesterday.
S.W., REPORTERS BUILDING, WASHINGTON, D.C.	12	As asked, the question is so broad I'm sure it
	13	has been covered in prior testimony.
	14	MR. MARSHALL: How can you be sure that it has been
	15	covered?
	16	MR. MILLER: I read his testimony.
REET	17	MR. MARSHALL: That's fine. I just wanted to know.
300 7TH STREET,	18	(Discussion had off the
300	19	record.)
	20	CHAIRMAN BECHHOEFER: Well, Dr. Peck, you may have
	21	answered that, but is there anything you could add to your
	22	answers or something with any more specificity that you might
	23	add?
	24	THE WITNESS: The only thing I could do different
	25	would be to bow to the adverb briefly, and, very briefly,

9

•

10472

1	I judge it on the basis of the shape of the settlement log
2	time curve and the disappearance of the excess poor
3	pressures.
4	BY MS. STAMIRIS:
st 5	Q Olay. Did the results of the additional borings
9	requested by the NRC Staff that were taken in any way con-
202)	flict did any of that boring information conflict with
8 8	your analysis that the secondary consolidation had indeed
9 P.C.	
NOT 10	A Not in my judgment.
REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345 5 7	Q In your judgment, there were no there was no
s 5 12	data which indicated a lack of secondary consolidation at
13	any point under the Diesel Generator Building?
8 SH3	A That's right.
15	MS. STAMIRIS: I don't have any more questions
н. . 16	for Dr. Peck at this time.
	I'm sorry; I see one that I missed on one page here.

a 1	MR. MILLER: I believe his testimony yesterday
2	was specifically directed to future settlements.
3	MR. MARSHALL: I don't recall that, Mr. Miller.
4	(Discussion was had off the
sts 2	record.)
554-2	CHAIRMAN BECHHOEFER: Dr. Peck, is there
EPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345 1 01 6 8 2 9 9 1	anything additional to what you testified to yesterday
8 2002	that you might add in response to Mrs. Stamiris'
N, D.C	current inquiry?
01 10	I mean, are there other factors that should be
IHSAN 11	taken into account or
'9NI 12	MR. MILLER: I have a page number. On 10314
anna 13	of yesterday's transcript the witness answered: "These
SHELL 14	figures do not assume that the building is going to
HOAAA 12	be hung up on the piping, and I feel quite sure that
. 16 % s	that will not happen. The rattlespaces will take care
	of that, for example, and"
17 17 17 17 18 18 19 19	MR. MARSHALL: I apologize. I recall it now.
19	Yes, I do recall it.
20	MS. STAMIRIS: How would it be if I dropped
21	that question and replaced it with one other that
22	Mr. Miller just reminded me of.
23	BY MS. STAMIRIS:
24	Q There was a transcript reference that I looked
25	up myself, and it has to do with a statement that
C. 1997	

Mr. Miller made yesterday that said that -- and I don't 1 have -- I believe it was on 10,337, Mr. Miller said 2 3 something to the effect that Mr. Lengini's review was 4 undertaken to further corroborate Dr. Peck's conclusions. 5 And I wondered if any consideration was given to -- I'm 6 sorry; I need to ask first whether Mr. Lenzini is a 7 colleague of Dr. Hendron's and what your relationship, 8 also, is with him.

A Mr. Lenzini and Dr. Hendron are both on the staff of the Civil Engineering Department at the University of Illinois. They also work together on other projects, I believe.

Mr. Lenzini at one time was a student of mine when I was at the University of Illinois. And I hasten to say that he hasn't been at the University of Illinois continuously since those days.

Those are the relations.

Q Thank you. And in regard to the review that was undertaken, to use Mr. Miller's words, to further corroborate your conclusions, I wonder if any consideration was given to a more independent type of review or a more objective or farther removed type of review or analysis of the data?

MR. MILLER: I object to the characterization. I don't think there's any foundation for any suggestion

on this record that the review performed by Mr. Lenzini was neither independent nor objective.

MS. STAMIRIS: Well I think that the relationships that Dr. Peck mentioned speak for themselves, as far as a possible conflict of interest in such an undertaking of the review. And because of that relationship and because of a statement which seemed to go along with what I was thinking was that it was undertaken for the very purpose of trying to corroborate certain conclusions. That doesn't seem like a very objective, scientific, detached way to go about things as important as this. And that is why I wondered if any consideration was given to what I would say is a more independent, objective, detached analysis --

1 MR. MILLER: Well I think Ms. Stamiris is 2 certainly free to argue from the facts that have been established on the record that Mr. Lenzini's words 3 4 should be discounted in some way by the Board because of 5 circumstances she mentioned. But to characterize the character of this witness that way is simply without 6 foundation on the record and I don't believe there is 7 8 anybody who is going to come forward to take the witness 9 stand and say that the review by Mr. Lenzini was in fact 10 nonobjective or partial or in some way unprofessional.

CHAIRMAN BECHHOEFER: If you put a different characterization on it, though, I think the witness can arswer --

MR. MILLER: Was there somebody else considered for the job, I think that would be a fair question.

CHAIRMAN BECHHOEFER: For corrobational purposes. Why don't you just ask it that way, in terms of -- with a mutual characterization or -- did you consider others when you thought of having a study to corroborate your own or not corroborate as the case may be but --

22 THE WITNESS: That wasn't the purpose of 23 engaging Mr. Lenzini. It was to have an independent evaluation. I did consider the possibility that other people might be chosen. I chose Mr. Lenzini because I am

if he found something different.

CHAIRMAN BECHHOEFER: You don't think he would be intimidated in any way by his prior --

THE WITNESS: I am acconsiderable distance from him now and he is quite a bit bigger than I am. I don't think he is intimidated by me in any respect.

BY MS. STAMIRIS:

Q Well Dr. Peck, to follow up on that, when you use the words, there is no possibility, that is, that is a very extreme choice of terms, and I would like to ask you if the purpose of this study by Dr. Lenzini was to determine the accuracy of the analysis on the basis of the data and indeed, not to corroborate, did you not consider that just for outward appearances of potential conflict of interest or potential intimidation or whatever, when a former student is asked to evaluate the world-reknowned expert's analysis? Did you not consider that for other reasons? Perhaps, it would have been more prudent to have someone other than Mr. Lenzini undertake this review.

A

What you are really saying is --

MR. MILLER: Dr. Peck, I have to object. I think there is a mischaracterization of what Dr. Lenzini was asked to do and secondly, this is about the third or fourth time in the last two days that the words "conflict of interest", has been thrown about. Extremely loosely, as far as I am concerned, without some expression on the record as to just what is referred to. I think that question is vague and argumentative as well.

-1-3

well.

1 MS. STAMIRIS: I think Mr. Miller has mischarac-2 terized my question. I had asked a very different question 3 than what I asked before and I asked if -- I didn't charac-4 terize the study of Mr. Lenzini. I said if the purpose of 5 the study was to determine the accuracy as opposed to the 6 purpose being to corroborate the data, then did Mr. -- did 7 Dr. Peck feel that for other reasons, which I won't repeat 8 at this point, that it might have been more prudent to ask 9 someone else to understand that review than Mr. Lenzini. 10 MR. MILLER: I have to have Dr. Peck answer that

question.

CHAIRMAN BECEHOEFER: You may answer.

THE WITNESS: The most important quality that I
wanted and that I think any engineer would want in a person
to do any job, is his ability to do the job that you want.

16 If I were to follow your line of reasoning, I 27 suppose this would imply that the less I knew about a per-15 son's characteristics and credentials, the better he would 19 be to do a particular engineering job. I have a feeling that 20 having been associated with many students and many other 21 people who are not students, knowing personally a great 22 many people in this profession, that I would much rather 23 have the advantage of choosing a person who's capabilities 24 and qualities I know than of shooting in the dark, as it 25 were and asking somebody to do it whose capabilities I

•

.

	1	didn't know.
	2	BY MS. STAMIRIS:
	3	Q For the last question on the subject, I will ask
	4	you whether or not you think there are numerous other indi-
345	5	viduals who are just as qualified that perhaps someone else
554-2	6	could have picked up to do the job and do it as well as
(202)	7	Mr. Lenzini did.
20024	8	A That could be.
(, D.C.	9	MS. STAMIRIS: All right, I don't have any further
NGTON	10	questions.
S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345	11	CHAIRMAN BECHHOEFER: Miss Sinclair.
NG, W	12	RECROSS EXAMINATION
IUILDI	13	BY MS. SINCLAIR:
ERS B	14	Q Dr. Peck, did I understand you to say that the
EPORT	15	surcharge, to your knowledge, added little or no additional
W. , RI	16	stress to the building?
	17	A No, I don't think I said that.
300 7TH STREET,	18	Q What kind of stress do you think was added to the
4LL 00	19	building?
ē	20	A By the
	21	Q By the surcharge?
	22	Let me put it another way. I think it follows
	23	some of the questions that Barbara asked. I wanted to know
	24	if there were additional cracks in the building, and I
	25	believe you said that some of the cracks were closed?
		The same some of the stacks were stobed.

10481

1 A Some of the cracks, I think, I said, tended to 2 close. 3 MS. SINCLAIR: Well, I think I might as well 4 introduce this as an exhibit right now. It is that Army 5 (202) 554-2345 Corps of Engineers document. 6 CHAIRMAN BECHHOEFER: Miss Sinclair, I think I 7 mentioned it should be sponsored -- well you can ask for it 2 8 to be introduced but the person to ask to authenticate it 306 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 9 is a Staff witness. 10 MS. SINCLAIR: Well, I will just give you a copy 11 to look at. 12 CHAIRMAN BECHHOEFER: You can identify it now but 13 you ought to wait until the Staff witness who is respon-14 sible for it before we determine whether it should go in 15 or not. 16 MS. SINCLAIR: Well, you can look at it while I 17 am speaking. 18 On page three in the last paragraph -- is it 19 proper for me to read this? 20 CHAIRMAN BECHHOEFER: You can ask him questions 21 about it but why don't we identify the document. You may 22 offer it into -- have it introduced -- not introduced but 23 identify it as a proposed exhibit, if you wish. I don't 24 think we can formally have it on the record with this 25 witness but I think we can perhaps do it when Mr. Singh

say some of the cracks appear to have closed. That was my own judgment.

Secondly, I believe I have seen reports or comments to this effect in the documents, but I can't tell you where.

BY MS. SINCLAIR:

Q I see. Down toward the bottom of that paragraph, it says (reading.) "The walls supported by this footing have shown a considerable increase in the number of cracks since the surcharge load was applied. The number of cracks prior to surcharge was 10 and the number of cracks since surcharge was 16".

So that is better than a 50 percent increase in the number of cracks in the building as a result of the surcharge. It goes on to say (reading.) "The additional curvature created by the surcharge appears to have been a major factor in increasing these cracks".

CHAIRMAN BECHHOEFER: Creating these cracks. MS. SINCLAIR: Oh, creating these cracks. MR. MILLER: Is there a question pending? MS. SINCLAIR: No, I just wondered if --JUDGE HARBOUR: I am not sure he answered the previous question. I may not have heard but I thought you asked if he was aware of any cracks that had been created by the loading. Do you know of any, yourself,

	20100
1	that were created by the surcharge in addition to those
2	that you saw that may have been closed?
3	THE WITNESS: That is not the question I
4	thought I was answering. I thought I was
5	JUDGE HARBOUR: I may have misphrased
6	THE WITNESS: The question I thought I was
7	answering or was answering was whether or not I had any
8	knowledge that cracks, some cracks were closed as a
9	consequence of the surcharge.
10	JUDGE HARBOUR: Yes, I thought subsequent to
11	that there was another question.
12	THE WITNESS: I see.
13	BY MS. SINCLAIR:
14	Q Are you aware or are you aware of the
15	additional cracks that were induced in the building by
16	the surcharge?
17	A Well I am willing to accept this statement as a
18	statement of fact.
19	MR. MILLER: Are you referring to Exhibit 16?
20	THE WITNESS: Yes, Question 6.
21	JUDGE HARBOUR: Did you have any personal
22	knowledge, though, of cracks that formed?
23	THE WITNESS: No. When I looked at the
24	building, for example, I wasn't counting cracks and I
25	couldn't say whether new ones had appeared as this would

BY MS. SINCLAIR:

2 Q And it said, in the opinion of the Corps of
3 Engineers, they discussed the manner in which your data
4 was arrived at. It says (Reading)

"In the opinion of the Corps of Engineers, soil information obtained by proper sampling and testing as in the case of the soils in this discussion are more reliable than those obtained on the basis of the in depth property and the soil descriptions. The three factors used by Dr. Peck provide only rough data and cannot be relied on".

10.88

Do you know that if part of your calculation for, what we were discussing here, of long term-secondary settlement, if you used these kinds of calculations or those related to that in any way to the settlement in any way --MR. MILLER: I am sorry. I am totally confused

18 by the question. There are a lot of "these" and "that's".
19 I am not sure what she is referring to.

MS. SINCLAIR: This paragraph discusses the manner in which Dr. Peck arrived at certain information that the Army Corps of Engineers was looking at, and they said that the factors used by Dr. Peck can provide only rough guidance to engineers and cannot be relied on. So, I am asking first of all, was this method of arriving at your information

.

10489

	1	discussed here, a part of the method that you used in your
	2	calculations for the secondary settlements that we are
	3	talking about here? Or, is it not related at all?
	4	THE WITNESS: It is not related at all.
345	5	BY MS. SINCLAIR:
554-2	6	Q What was this in relation to this calculation?
20024 (202) 554-2345	7	A This is in relation to the evaluation of some of
	8	the test results from the series of borings requested by the
N, D.C.	9	Corps of Engineers.
NGTON	10	Q Was the purpose of the borings to in any way
REPORTERS BUILDING, WASHINGTON, D.C.	11	connected with determining the amount of settlement?
ING, V	12	A It was to the Corps.
BUILD	13	Q Barbara tells me it was to determine whether
TERS	14	secondary consolidation was achieved. Do you agree with
REPOR	15	that?
S.W. , F	16	A No. It was to determine whether secondary con-
	17	solidation was reached.
300 7TH STREET,	18	Q Well, I will take your word. Would you agree that
300 71	19	it was for the purpose of seeing if secondary consolidation
	20	was reached?
	21	A I think that was the principal purpose that the
	22	Corps had in mind, although I can't really testify in
	23	detail what they had in mind. This was their program in
	24	effect, not mine.
	25	Q The Army Corps of Engineers goes on to say that

the results obtained, using these kinds of factors could 2 very well be used to design ordinary structures, but for a 3 category I structure used at the nuclear power plant, it 4 is not advisable to depend on them.

If they were using this data to reach some conclusion about whether secondary consolidation had been reached and said that these factors could not be relied on, how much more thorough would the measures or the studies have to be to be suitable for a category I structure? MR. PATON: I object.

11 MR. MILLER: I am going to have to object also. 12 I really allowed Miss Sinclair to examine Dr. Peck on a 13 document that he didn't prepare, and to my knowledge, may 14 have seen only once before. But really we are asking him to 15 speculate on what was in the Corps' mind when this document 16 was prepared.

17 I understand the author of the document is going 18 to be available for examination, and I suggest those ques-19 tions are more properly addressed to that individual. 20

(Discussion had off the record.)

CHAIRMAN BECHHOEFER: Let me ask you one thing. The evaluation, in your evaluation which is referred to on Page 6, perhaps elsewhere, am I correct that that evaluation did not enter at all into the conclusions reached in your testimony before us?

THE WITNESS: Yes, that's right, that is correct.

CHAIRMAN BECHHOEFER: That evaluation, just for background -- how did the particular evaluation arise? I just want to make the record clear on this.

THE WITNESS: The Corps felt that by making additional borings on certain tests, they could make a better determination of the extent to which the surcharge program had been successful, specifically, whether the preconsolidation load indicated by the samples by means of certain tests would demonstrate whether or not those samples had been fully consolidated under the weight of the surcharge.

The Corps conducted these tests and made some interpretations. The Corps had the tests conducted, actually by an outside firm and I reviewed some of the results that they obtained and I was performing what you might call, internal tests, to see whether these results

seemed to me to be consistent.

Some of the tests or criteria that I applied are theornes that are referred to in the last paragraph, for example, on Page 6.

They are not necessarily things that I relied on heavily but there are a variety of cross-checks and even emperical evidence that one can use to check the consistency of the data. I had come to some conclusions on the basis of these tests, that I had transmitted to Bechtel and which eventually went to the Corps. This is their response to my interpretation of those data.

This is all, of course, subsequent to the removal of the surcharge and construction of the buildings and so on.

CHAIRMAN BECHHOEFER: I just wanted to ascertain that this is something completely different from the evaluation which you have given us in your testimony.

THE WITNESS: That's right.

BY MS. SINCLAIR:

Q Dr. Peck, while you are here, I just wanted to ascertain, before the author of the paper is here, whether you did indeed use these three factors that are discussed here verbal description of soils and empirical equations in arriving at your calculations and your data

	2	to clear it up for myself.
•	3	MR. MILLER: I believe the question was asked
	4	and answered but why don't you tell us one more time,
345	5	Dr. Peck.
554-23	6	THE WITNESS: I used these quantities or
(202)	7	descriptions that you have mentioned as part of the
20024	8	background that helped me to interpret the test results.
, D.C.	9	BY MS. SINCLAIR:
REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345	10	Q What additional factors did you use besides
ASHIN	11	this?
NG, W	12	A There were the test data themselves, of course,
nitai	13	which was the primary purpose of having carried out the
ERS B	14	exercise from the point of view of the Corps.
EPORT	15	Q All right, I just wanted to make sure that we
×.	16	have enough information from you so that we can pursue
ET, S.	17	cross-examination of Mr. Singh when he is here.
300 7TH STREET,	18	Can you tell me if the factor of time can lead
00 TT	19	to changes in soil so that you have other soil that is
ĕ	20	in secondary consolidation? I mean, the soil is in some
	21	other form as a factor of time?
	22	A Well I haven't changed my mind about that since
•	23	yesterday, no.
fol	24	
•	25	

9-6,pjl		10494
no.	1	BY MS. SINCLAIR:
•	2	Q Would you like to describe what elastic deforma-
	3	tion of sand and clay is?
•	4	A It's deformation that is fully recoverable if a
345	5	stress is removed.
WASHINGTON, D.C. 20024 (202) 554-2345	6	Q What kind of stress would that be?
4 (202	7	A Any kind.
. 2002	8	Q Pressure?
N, D.C	9	A That is one possibility. Tension, shear.
OLDN	10	Q Any seismic pressure or stress?
WASH1	11	A If the pressure produced by seismic forces, the
, OING,	12	same answer applies.
REPORTERS BUILDING,	13	Q I see. Could you tell us what seismic shakedown
TERS	14	is?
REPOR	15	MR. MILLER: I am going to object. Dr. Hendron
S.W.,	16	was here and that was his testimony and he is available for
	17	cross examination.
300 7TH STREET,	18	MS. SINCLAIR: In the beginning of his testimony,
300 71	19	it said that this is a Category I structure and therefore,
	20	it should be the criteria should include its being able
	21	to function, the building should be able to function in the
	22	event the safe shutdown earthquake there's been very
•	23	little discussed about the seismic integrity or analysis
-	24	of the Diesel Generator Building and it seems to me that
•	25	this is

9-6,pj2

	1	CHAIRMAN BECHHOEFER: I think the discussion went
	2	on when a different witness was there.
	3	MR. MILLER: With respect to soils, and certainly
	4	with respect to the structure itself, witnesses that get to
345	5	appear, I'd want to address the ability of the structure
20024 (202) 554-2345	6	itself that deals with the deismic events.
4 (202	7	CHAIRMAN BECHHOEFER: I will sustain that objec-
	8	tion.
N, D.C	9	BY MS. SINCLAIR:
NGTO	10	Q Can you tell us why you deleted such a substantial
WASHINGTON, D.C.	11	amount of your testimony which would have given us much
OING,	12	more for cross examination?
BUILI	13	MR. MILLER: I am going to object. We went into
REPORTERS BUILDING.	14	that yesterday and Dr. Peck responded to questions, I
REPOI	15	believe, from Miss Stamiris and from Miss Sinclair.
	16	MS. SINCLAIR: I don't believe he told us why
REET,	17	he deleted so much of his testimony.
300 TTH STREET.	18	CHAIRMAN BECHHOEFER: I think that was asked and
300 7	19	answered.
-	20	MS. SINCLAIR: Well then I would like to ask
:	21	this other question.
-	22	Would you like to say for the record that you did
	23	not rely to the Casagrande theory at all in developing your
	24	predictions of the secondary consolidation?
3	25	MR MILLER: Qnce again, there is no foundation on
	- 1	

1	the record that
2	MR. MARSHALL: I take exception.
3	MR. MILLER: There is no foundation that a Dr.
4	
5	
6	
5 6 7 8 9 10 11 12 13 14 15	MR. MARSHALL: The question is in the testimony and
8	
9	
10	CHAIRMAN BECHHOEFER: I thought that same question
11	was asked and answered. I think he said earlier, he did
12	not rely on my recollection is that Dr. Peck did not
12	rely on Dr. Casagrande at all in any part of his testimony
13	except with respect to using one of the instruments rele-
14	vance.
15	MS. SINCLAIR: I guess Judge Bechhoefer, I have
16	heard you say that quite a number of times but I would like
17	to have Dr. Peck tell me that.
18	CHAIRMAN BECHHOEFER: I think he said it; I am
19	not making that up. I think he said it.
20	MR. MARSHALL: If he said it once what is the
21	objection to him saying it one more time so we can all hear
22	him.
23	CHAIRMAN BECHHOEFER: I think Mr. Miller has it in
24	the record.
25	(Reading.)

300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

BY MS. SINCLAIR:

Is there any record as part of this proceeding of 0 the initial data that you used for arriving at your secondary consolidation predictions and what your results were that we can compare them to what you came up with as a result of the recalculation of the data?

A

I am sorry, would you try that again.

Q Well you had told us that you first used the data made available to you and came up with your predictions 10 and your calculations based on that. And then, you went to Mr. Lenzini and asked him to recalculate all the data to see how close it would come to what you had -- I wonder if there is any part of -- as part of the record in this proceeding, we do have as an exhibit, what your initial calculations were based on the initial data prior to Mr. Lenzini's recalculation.

A That's what the body of most of this text is and 18 all of the figures in Appendix C, those are my own use of 19 the initial data which came out of the answers to the 20 questions as to the responses -- I guess that is the proper term -- which are --

9-7

25

are	1	BY MS. SINCLAIR:
0	2	Q All of that testimony in Appendix C would have
	3	been predated and done by you prior to Mr. Lenzini's
	4	calculations?
\$	5	A About a year and a half ago.
554-23	6	Q I see. Now yesterday, you said that if there
20024 (202) 554-2345	7	was differential settlement that was more than .75, you
20024	8	said it just was not possible. But today, you said that
	9	based on Figure 8 at .83, as Bechhoefer pointed out to
WASHINGTON, D.C.	10	you, was indeed the differential settlement; is that
SHING	11	
	12	correct?
LDING		A Well the first part of your statement, I don't
• BUI	13	recognize. As I said, differential settlement of .75
KTERS	14	was not possible. I don't even know what that means.
REPORTERS BUILDING,	15	Q Three-quarters of an inch was in your testimony.
S.W.	16	A As I say, I don't recognize, in that form at
	17	least.
300 7TH STREET,	18	Q You predicted in your testimony that the
17 008	19	differential settlement would be three-quarters of an
	20	inch.
	21	A I believe the exact wording is about three-
-	22	quarters of an inch.
•	23	Q All right. And I am sure that I asked you if
	24	it was any higher, and then Barbara asked you could it be
•	25	이야지 아들은 것 같아? 한 것 같아요. 아들은 것 같아요. 그는 것 같아요. 가슴을 넣었는 것을
		any higher. If it wasn't any higher could it possibly
		ALDERSON REPORTING COMPANY, INC.

9-7-1

3-7-2

10499

be any higher, and you said it couldn't be. But today,
 you are agreeing that the prediction could be .83
 differential settlement.

A I will simply submit this. About threequarters of an inch is sufficiently equivalent to .83. Q But yesterday you said Consumers could fire you

if it was any higher than three-quarters of an inch.

MR. MILLER: I'm going to object. I think Ms. Sinclair is simply arguing with Dr. Peck. He said what his conclusions are.

MR. PATON: I think the argument is over the distinction about three-quarters of an inch and about .83 inches, and I think Dr. Peck has explained that he regards those two figures as roughly equivalent; is that correct?

THE WITNESS: Yes sir.

BY MS. SINCLAIR:

Q Is it proper to ask what your fee is for your work, Dr. Peck? I mean, we are the ratepayers and we would like to know what fees were --

MR. MILLER: I think it is objectionable on the grounds Ms. Sinclair gave as to the basis for the question.

Furthermore, it seems to me that it is totally irrelevant to any issue before this Board what Dr. Peck's

MR. MARSHALL: I don't want to object to what he is saying because it is a conflict here as to who is paying for the consultants. I am not sure that Consumers Power is paying for this. That is why I won't raise an objection to his objection.

CHAIRMAN BECHHOEFER: The amount of his fee is not relevant to anything we have to rule on. Same objection as to that.

.

BY MS. SINCLAIR:

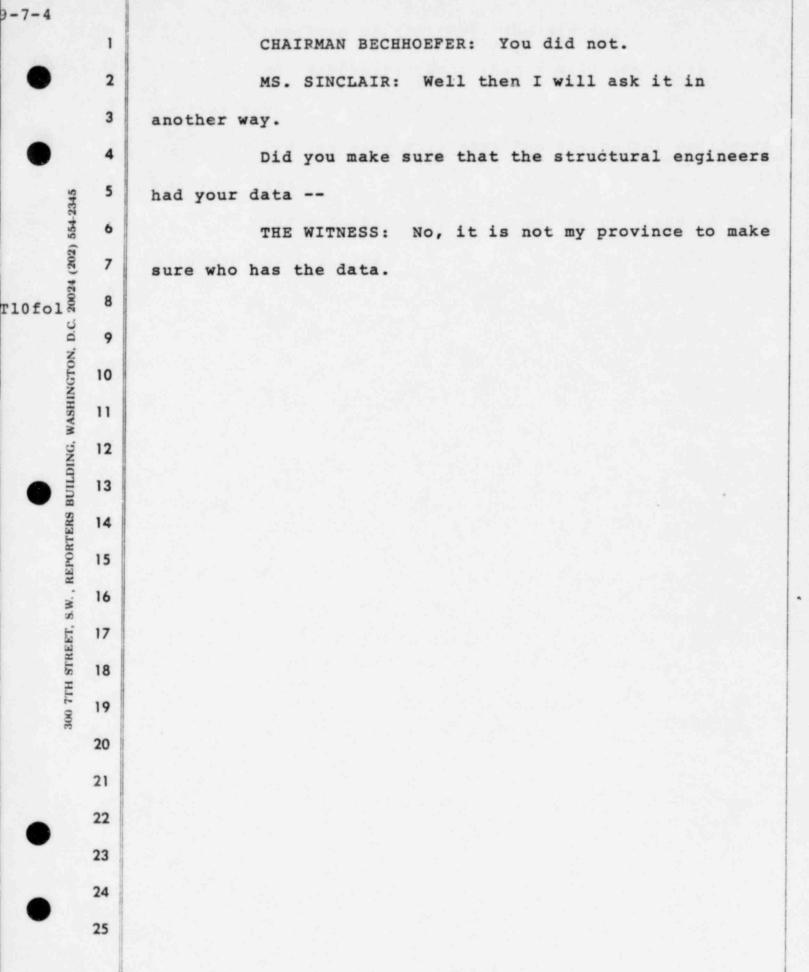

Q Do I understand that after you arrived at your predictions on secondary settlement, that you didn't make any effort to make sure these data were available to the structural engineers?

MR. MILLER: I believe -- I will object on the grounds that "hat is an absolute 180 degree mischaracterization of what his testimony was, if I understood your question.

MR. MILLER: Would you repeat the question? (Question read.) CHAIRMAN BECHHOEFER: Well I will sustain that.

22 I don't think he testified to that.

JUDGE HARBOUR: I am certain he didn't.
 MS. SINCLAIR: Well I was just asking if I
 understood it properly.

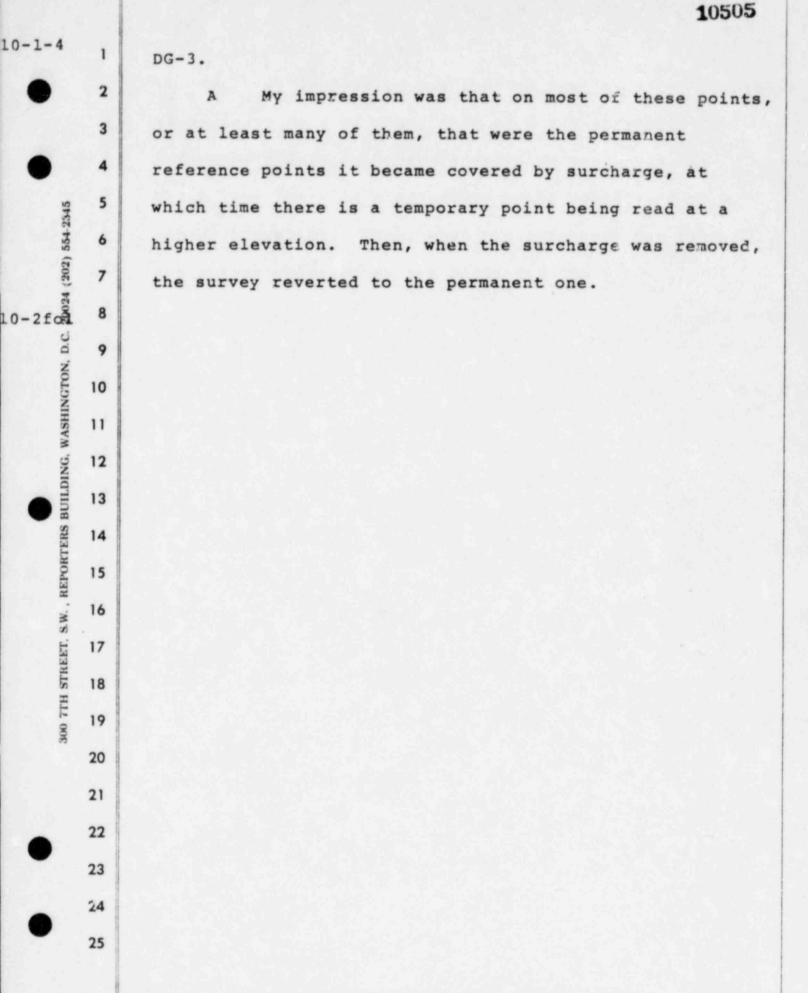

10502 10-1-1 1 MS. SINCLAIR: Well, I guess that question 2 occurred to me because you gave us something of a 3 dissertation on how disciplines should really interact 4 and work together and not be so compartmentalized, and 5 I heartily agree with that, and that is the reason I 300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345 6 asked this question, to see to what extent the engineers 7 such as you themselves take the responsibility for 8 making sure their data goes to the appropriate people 9 as used. 10 I guess that's all the questions I have. 11 RECROSS-EXAMINATION 12 BY MR. MARSHALL: 13 0 Well, now, Dr. Peck, if I can cease to become 14 an object of an objectionable object, I would like to 15 ask you just a couple of questions. If I become 16 objectionable, then I'll have to ask you to -- the first 17 question is that you, in answering some of the questions 18 for Mrs. Sinclair, stated in regards to cracks after the 19 removal of the surcharge that you noticed that the 20 cracks, cr many of them were filled. You stopped right 21 there. 22 No, that wasn't what I said, sir. A 23 Then tell me what, again, did you say? 0 24 I said I noticed that some of the cracks A 25

appeared to be smaller.

CM/DW

1 Smaller? Very well. I seem to remember some Q 2 testimony, Doctor -- and I don't think you were here --3 with reference to the removal of that surcharge, and I 4 don't even know who was testifying, but the word I'm 5 300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 30024 (202) 554-2345 going to use is well known to construction laborers, 6 so I don't think it's going to be bothering you any. 7 Grout was the word, and it seemed that they 8 stated those cracks were grouted sometime along in that 9 period of time when the surcharge was being removed. Are 10 you familiar with that? 11 No, I'm not familiar with that. A 12 Do you know that that was or was not done? 0 13 I don't believe it was done, but I would not be A 14 sure. 15 Well, I'm not sure that it was either, that's 0 16 why I'm asking. And I heard some conversation along 17 those lines, because if I'm understanding it correctly --18 do you know what grout is? 19 A Yes. 20 If I understand it correctly -- and I'm not a 0 21 construction man, I'm a farm boy -- grout is a very fine 22 cement made of very fine sand that will sift into cracks 23 and fill cracks. Am I correct, as you understand it? 24 That's one form of grout, yes. A 25 Well this is the kind that I've heard discussed 0

	10504
1	in this room sometime during the surcharge, or shortly
2	thereafter, this was happening, with a different group of
3	people, construction people.
4	That's all I wanted to know, if you were aware
5	of it, if you knew about it, and that's all the questions
6	I have for you.
7	(Discussion had off the
8	record.)
9	CHAIRMAN BECHHOEFER: Mr. Paton?
10	MR. PATON: Mr. Chairman, I may have one
11	question.
12	RECROSS-EXAMINATION
13	BY MR. PATON:
14	Q Dr. Peck, Chairman Bechhoefer asked you a
15	question about possible inaccuracies from changing
16	benchmarks, from going to one benchmark to another. My
17	question is: Isn't it true that the vast majority of
18	settlement measurements were taken on permanent
19	benchmarks, where you would not have the problem of
20	transferring to temporary benchmarks?
21	A My impression was, which may be wrong, that
22	with respect to the Diesel Generator Building let me
23	back up. Are we talking about benchmarks or reference
24	points?
25	이야 한 것 같은 것
	Q Settlement markers that they were reading, like
	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24

10-2,pj1

10506

one.	1	Q Dr. Peck, I'm not sure you answered the question.
0	2	Let me try it again.
	3	I mean over a period of time. I think you just
•	4	indicated that there were some where the problem migh' arise
2345	5	because there was a change from a permanent benchmark to a
20024 (202) 554-2345	6	temporary benchmark. My question is, over a period of time,
4 (202	7	isn't it true that the vast majority of settlement measures
	8	were taken on permanent measurements?
N, D.C.	9	MR. MILLER: May we have some further definition?
WASHINGTON,	10	Are you talking about the total number of settlement measure-
WASH	11	ments that were taken, the majority taken on permanent as
OING,	12	opposed to temporary?
	13	MR. PATON: That's the question I'm trying to ask,
TERS	14	yes.
REPORTERS BUILDING.	15	BY THE WITNESS:
S.W.	16	A Let me state my understanding of what I mean by a
REET,	17	benchmark at a reference point, because I'm not sure we're
300 TTH STREET,	18	still on the same wavelength.
300 7	19	I take it a benchmark is some established elevation
	20	from which one starts to make a survey and a survey has
	21	réference points.
	22	That was the definition I was using, at least.
	23	JUDGE HARBOUR: Could those reference marks also
0	24	be referred to as settlement markers?
	25	THE WITNESS: They could.

10-2,pj2

10507

1 Now, I th nk there were permanent benchmarks 2 for the surveys, probably for all of the surveys, but my 3 impression with respect to the reference points in the Diesel 4 Generator Building, for example, is that what we call the 5 permanent reference points, or permanent survey points were 6 at times obstructed when a temporary one was used, and then, 7 when possible, the surveyors returned to the permanent ones. 8 BY MR. PATON:

9 Q All right, you said they were at times obstructed.
10 The rest of my question is whether -- do you agree that the
11 vast majority of the settlement measures were taken on the
12 permanent reference markers?

A I don't think so. And when I looked at, for
example, my figure C-18, I see this gap in the records for
all the external points, for example, in March and in
September, which I take to be a time at which a transfer
was made temporarily in the measurements from the permanent
to the temporary reference points.

19 Q Dr. Peck, I suggest that observations have been 20 made from March of 1978 to the resent time. In light of 21 that, would you still -- verifies indicated a certain period 22 of time in which there was a possibility of a change from 23 permanent to temporary benchmarks, but observations have 24 been made since March of -- let me just ask you this: Do 25 you agree that observations have been made since March of

	- 12	 		o	- 4

80

11	1970:
2	A Yes, that's probably right. If you're talking
3	about the vast majority of the observations meaning reading
4	the same reference por the times as ten observations,
5	then I agree with you. There was a period when all the
6	reference points in the Diesel Generator Building almost
7	all were temporary points during that period.
8	Q How long was that period?
9	A That was from about mid-March to mid-September
10	of 1979, when the surcharge was there.
11	Since that time, I think probably most of them,
12	maybe all of them, have been made on permanent reference
13	points.
14	MR. PATON: That's all the questions I have,
15	Judge Bechhoefer. I do have a statement I'd like to make
16	before Dr. Peck leaves. Could I make it now?
17	CHAIRMAN BECHHOEFER: Fine.
18	EXAMINATION BY THE BOARD
19	BY CHAIRMAN BECHHOEFER:
20	Q Well, Dr. Peck, just one further thing. In the
21	way I read your testimony, you really weren't relying on
22	reference points much, if any, before the application of
23	the surcharge. Is that true?
24	A That's right.
25	

.0-3-1		10509
:ight	1	Q So that would be early '79 sometime?
•	2	A That's right. My plotting and my interest in
	3	the information in order to make predictions began
•	4	somewhere in January of '79.
345	5	CHAIRMAN BECHHOEFER: Right. Thank you.
) 554-2	6	MS. SINCLAIR: Judge Bechhoefer, I had one
4 (202	7	more question. I was wondering if Dr. Peck had
2002	8	predicted the sharp downward slope of the curve in
REPORTERS BUILDING, WASHING TON, D.C. 20024 (202) 554-2345	9	Staff Exhibit 16 once the water was drawn down to 592.
NC-FO	10	CHAIRMAN BECHHOEFER: I had thought he had said
WASHI	11	he was still going to analyze that.
DING.	12	If he can answer it, fine.
BUILI	13	MS. SINCLAIR: Well, I just wanted to know
RTERS	14	if he predicted it, which would have been
REPOI	15	THE WITNESS: Well, I hadn't predicted that
S.W	16	the ground water level or hadn't foreseen it was ver
300 7TH STREET, S.W.,	17	going to be drawn down that low. So that introduces a
TH ST	18	new point to be considered.
300 7	19	(Discussion had off the
	20	record.)
	21	CHAIRMAN BECHHOEFER: I'm wondering whether
•	22	there was still a question pending or whether anyone
	23	has any further questions they wish to ask this witness.
•	24	MS. STAMIRIS: I have some recross based on
	25	the last round. Shall I go ahead and

10-3-2	1	CHAIRMAN BECHHOEFER: Yes, why don't you go
•	2	ahead.
	3	RECROSS-EXAMINATION
•	4	BY MS. STAMIRIS:
2345	5	Q Dr. Peck, to start with the last question first,
20024 (202) 554-2345	6	I believe you just said that the break in data which
4 (202	7	represents on Figure C-18, which represents the change
2002	8	from temporary to permanent settlement monitoring points
N, D.C	9	was roughly from March of '78 till sometime in 1979.
NGTO	10	Didn't you indicate that?
WASHINGTON, D.C.	11	A March of '79 to September of '79.
	12	Q This break represents a break from March of '79
REPORTERS BUILDING,	13	tall September of '79?
LERS 1	14	A That's right.
EPOR	15	Q Okay.
S.W., R	16	A That is the period, essentially, when the
	17	surcharge occupied the building.
H STR	18	Q And does that correspond, then, to a period when
300 7TH STREET,	19	the sand level reached a certain point and overtook the
e	20	first monitoring points?
	21	A Yes.
•	22	Q When you said in response to Mrs. Sinclair's
	23	questions and some others that you thought you made a
•	24	reference to cracks which closed I can't remember how
-	25	you said it. Maybe they didn't close all the way, but

tended to close up while under the effect of the surcharge, is that correct?

A After the surcharge had been placed and removed, some of the cracks that had previously been open had tended to close.

Q Well, wouldn't it be important to determine whether, in fact, those cracks tended to close up prior to application of the surcharge, for instance, when the electrical duct banks were released? Do you think that that indeed accounted for the closure of cracks that you're referring to, as opposed to the effects of surcharge?

A Possibly in addition to, but not necessarily as opposed to. But you are quite right that some closures did occur when the duct banks were released.

Q And those closures that occurred when the duct banks were released took place roughly in November of 1978, didn't they?

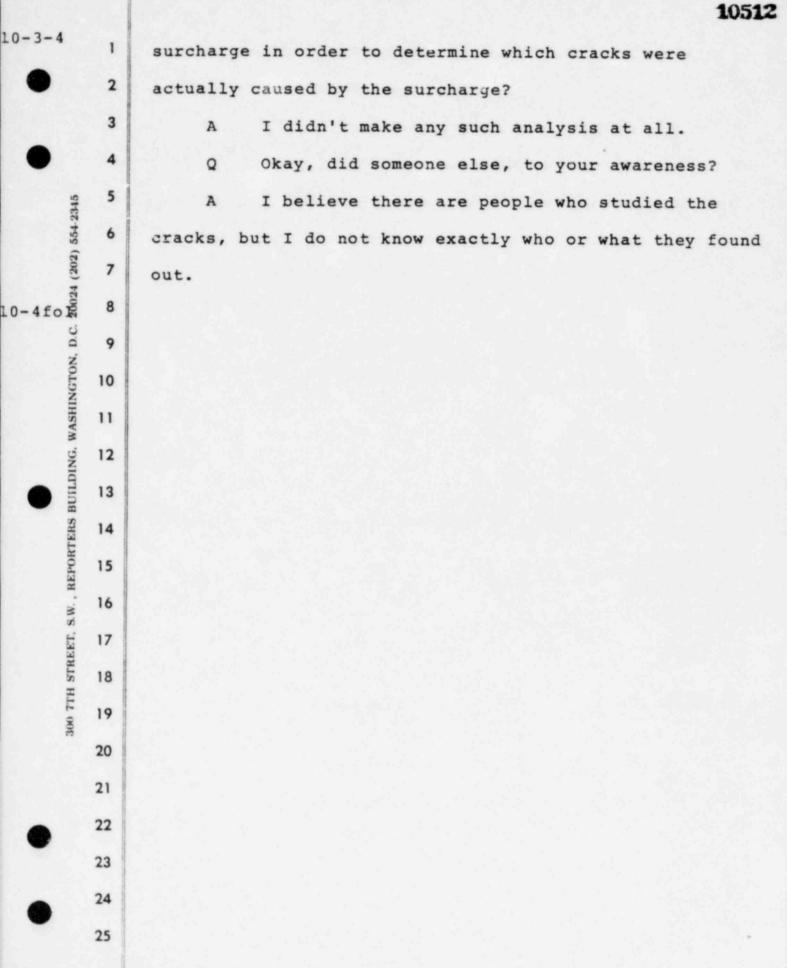

A That seems reasonable.

Q Well, would I be correct in assuming that they took place within a month after the duct banks were released? Wouldn't I?

b r r

A Probably right away.

Q Okay, I thought so. Okay, then what I want to know is what analysis did you do of cracking immediately prior to the surcharge and immediately after the

out.

2

3

0

question.

10513 Okay. And, let me see, there was one other When you said that in your judgment there was no ided by the original, or by the additional borings

300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

4 data provided by the original, or by the additional borings 5 which were requested by the NRC Staff and the Army Corps of 6 Engineers, which to you indicated a lack of secondary con-7 solidation, I want to ask as a follow-up question to that, 8 are you aware of a difference of opinion in that regard 9 expressed by the Army Corps of Engineers? 10 A Yes. 11 MS. STAMIRIS: Okay, thank you. I don't have any 12 other questions now. 13 CHAIRMAN BECHHOEFER: Are there further questions-+ 14 MR. MILLER: No, I have no further questions. 15 CHAIRMAN BECHHOFER: Either re-redirect or --16 MR. MILLER: No. 17 (Discussion had off the 18 record.) 19 RECROSS EXAMINATION 20 BY MS. SINCLAIR: 21 I just wondered at what point will we start to 0 22 consider that one and a half inch maximum secondary settlement? 23 Will it be after this curve, you know, irons out, or do 24 you include this curve in your prediction? 25 The dates that the predictions apply to are A

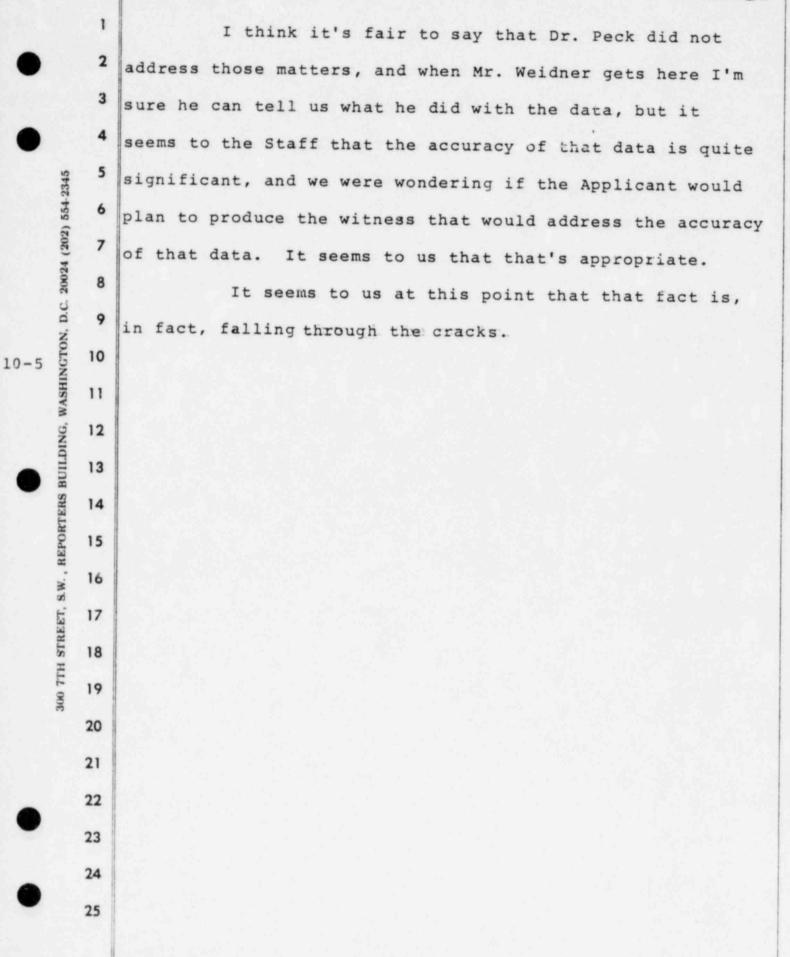

•

•

	1	spelled out on Text Figure 8 at the present time, just
	2	before Page 80.
	3	D'm sorry, Text Figure 5, which follows page 78,
	4	which specifically tells the dates from December 31, '81
2345	5	to December 31, 20-25, so it begins on December 31st of
20024 (202) 554-2345	6	1981.
4 (202	7	CHAIRMAN BECHHOEFER: You know, your Text Figure
	8	8 talked about total surcharge
N, D.C.	9	THE WITNESS: That's right.
ASHINGTON,	10	CHAIRMAN BECHHOEFER: and it also had some dates.
WASH	11	THE WITNESS: Yes, but the question, I think, had
OING.	12	to do with the beginning of the secondary settlement, which
R	13	is spelled out on Figure 5.
	14	BY MS. SINCLAIR:
ICHAN	15	Q So then this curve would be included partially,
· · · ·	16	at least, within that date, is that right?
VERE'S	17	A Yes.
10 11	18	CHAIRMAN BECHHOEFER: By "this curve," do you
-	19	mean Staff Exhibit 16?
	20	MS. SINCLAIR: Yes.
	21	CHAIRMAN BECHHOEFER: Okay.
	22	BY THE WITNESS:
ę	23	A Yes, that's right. The time covered by some of
	24	these points was within that period for the estimate of
	25	secondary settlements.

10515

1 So do you expect that curve to stay down at Q 2 this point -- and since the dewatering, the permanent 3 dewatering plan, I understand, the water level is going 4 to be at 595-C, that's right about the point at which this 5 300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345 curve is now. 6 I hate to say I expect something, because as soon A 7 as I say I expect something on this project it immediately 8 becomes a prediction, but what I think I would expect is 9 that once the dewatering situation stablizes the curve 10 will become parallel to the slope that's indicated by 11 Figure 5, or that's implied in Figure 5. It will be dis-12 placed below the curve that would have been drawn had the 13 dewatering settlement not taken place. 14 MS. SINCLAIR: Thank you. 15 CHAIRMAN BECHHOEFER: Any further questions? 16 MR. MILLER: None. 17 CHAIRMAN BECHHOEFER: The Board has none. 18 Mr. Paton, you wanted to make a statement? 19 MR. PATON: Yes, Mr. Chairman. 20 Mr. Chairman, several hours ago, you alluded to a 21 problem that the Staff sees, and that is something falling 22 through the cracks. And what I'm getting at is the 23 accuracy of the optical leveling surveys that establish the 24 actual measurement settlements that were used as input into 25 the structural analysis.

MR. MILLER: Well, I believe that Mr. Weidner
will be able to address that subject, and if for any
reason he is unable to respond to questions there are
other witnesses who are readily accessible who can respond.
MR. PATON: If we want to go that way it's all
right, Mr. Chairman, but that hardly seems responsive.
If Mr. Weidner is going to testify to the

accuracy -- I know Mr. Weidner is going to tell us a lot about what he did with his data when he got it, but, frankly, I'd be very surprised if he could testify as to the accuracy of the data he received from the survey people.

But, if that's the Applicant's position, that's the way we go. But I just think --

CHAIRMAN BECHHOEFER: Well, if he can't answer the questions, we may have to consider then whether further witnesses are necessary.

I'm certainly not ruling that out.

(Discussion had off the

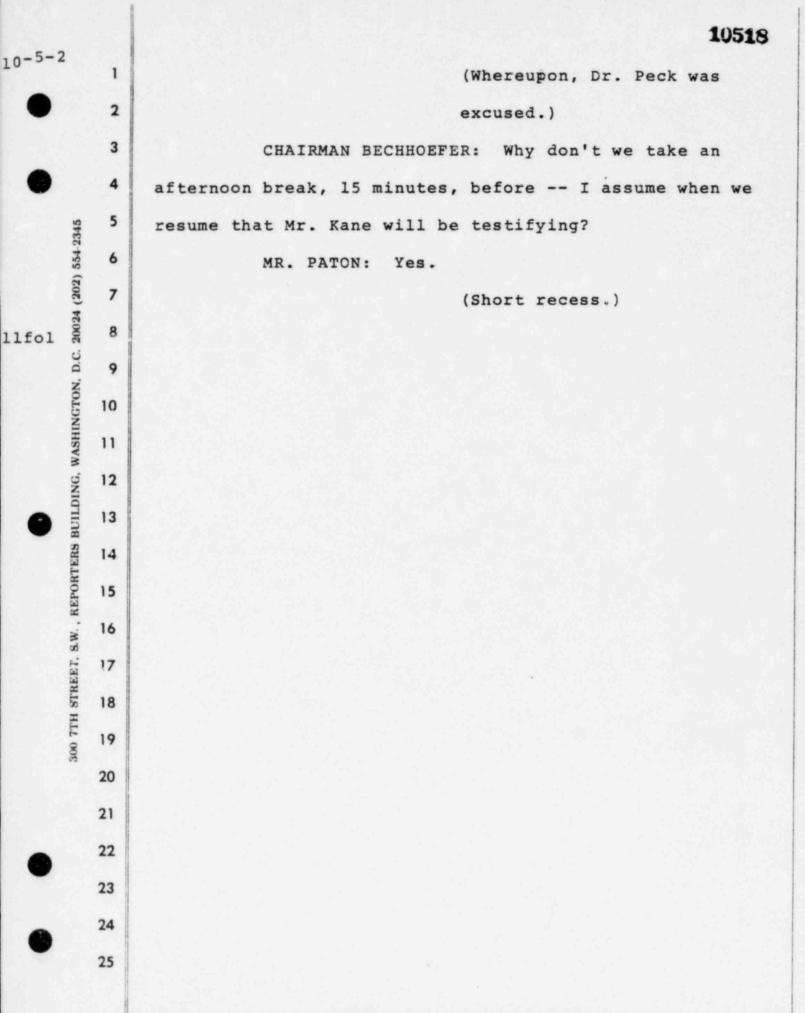

10517

record.)

CHAIRMAN BECHHOEFER: Is there any reason why we can't excuse Dr. Peck at this time?

MR. PATON: No.

25 THE WITNESS: Thank you.

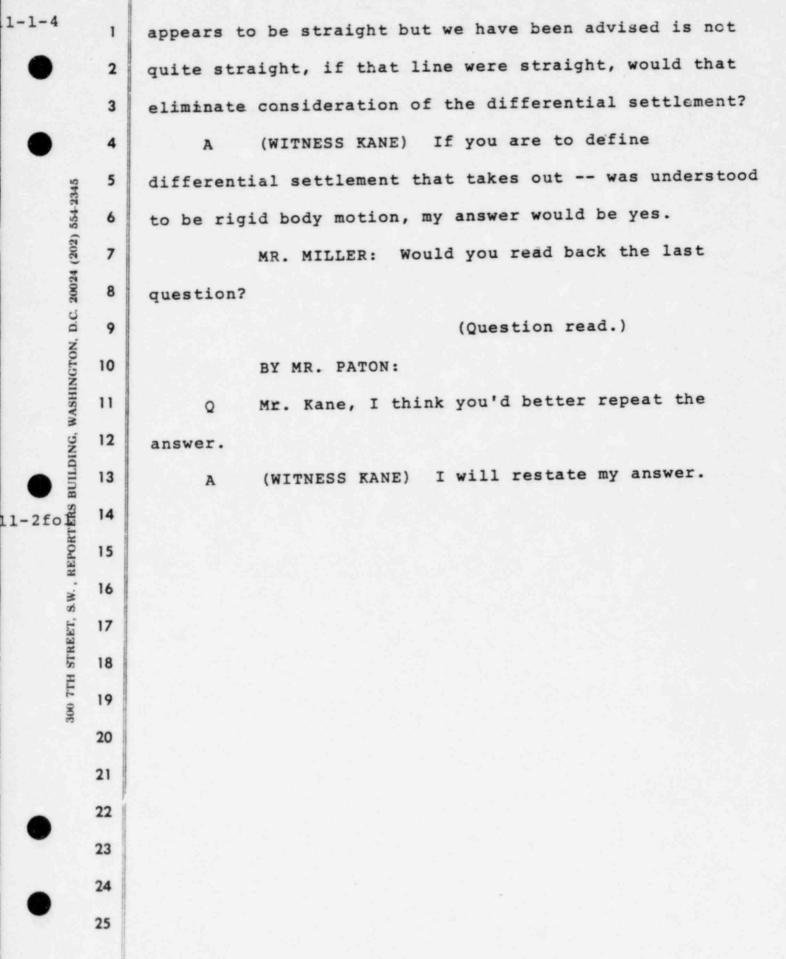

KJ/DW		
11-1-1	1	CHAIRMAN BECHHOEFER: Back on the record.
•	2	MR. PATON: The last document is a stipulation
	3	involving the Diesel Generator Building. It has been
•	4	shown to all parties. I am not sure the Board has a copy.
345	5	CHAIRMAN BECHHOEFER: No.
) 554-2	6	MR. PATON: Mr. Chairman, we are ready to
REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345	7	proceed with Mr. Kane and there are just a few sections
2002	8	of the SER involved, so I would also ask Mr. Hood to
N, D.C	9	join him on the witness stand.
NGTO	10	Whereupon,
SHII	11	
WA		JOSEPH KANE
DING	12	DARL S. HOOD,
BUIL	13	called as witnesses by counsel for the Regulatory Staff,
TERS	14	having been previously sworn by the Chairman, was further
REPOI	15	examined and testified as follows:
М	16	DIRECT EXAMINATION
300 7TH STREET, S	17	BY MR. PATON:
H STH	18	Q Mr. Hood, would you state your full name
300 77	19	please for the record?
	20	A (WITNESS HOOD) My name is Darl S. Hood.
	21	Q Are you familiar with the portions of the SER
	22	that you are sponsoring with respect to the Diesel
	23	Generator Building?
-	24	
•	25	A (WITNESS HOOD) Yes, I am.
	~	Q What sections are those?

ALDERSON REPORTING COMPANY, INC.

11-1-2	1	A (WITNESS HOOD) Those are Sections 1.12 and
•	2	they include 1.12.5.
	3	Q Are the statements contained in those sections
•	4	true?
2345	5	A (WITNESS HOOD) Yes.
S.W. , REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345	6	Mr. Kane, would you state your full name for
24 (202	7	theord, please?
C. 200	8	A (WITNESS KANE) Joseph Kane.
ON, D.	9	Q And what sections of the SER and the SER
IINGTV	10	supplements are you sponsoring in connection with the
WASH	11	diesel generator testimony?
DING,	12	A (WITNESS KANE) As a Staff member, I am
BUIL	13	sponsoring SER Section 2.5.4 and Supplement to the Safety
RTERS	14	Evaluation Report No. 2 and I am sponsoring Sections
REPO	15	2.5.4.1.2, 2.5.4.4.2, 2.5.4.5.1, 2.5.4.5.2, 2.5.4.5.4,
	16	2.5.4.5.6, 2.5.4.6.3, 2.5.4.7 and 2.5.4.8, ascthese
REET	17	sections pertain to the Diesel Generator Building.
300 7TH STREET,	18	Q And there are several other sections or
300	19	subsections that will be sponsored by Mr. Singh when he
	20	arrives tomorrow; is that correct?
	21	A (WITNESS KANE) That is correct.
•	22	Q Are the statements contained in those sections
	23	true?
•	24	A (WITNESS KANE) Yes.
	25	Q I neglected to ask you, Mr. Kane, are there any
		ALDERSON REPORTING COMPANY, INC.

1-1-3		
	1	10521
		corrections, additions or deletions to be made with
•	2	those statements?
	3	A (WITNESS KANE) To my understanding, the
	4	corrections that were required have been made previously.
REPORTE BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345	5	Q Mr. Hood, do you concur in that? Do you have
() 554	6	any corrections to be made to sections that you named?
(202	7	A (WITNESS HOOD) No, I have no corrections.
20024	8	
D.C.	9	for have with you a copy of
'NO		Mr. Weidner's testimony?
INGT	10	A (WITNESS KANE) Yes, I do.
VASH	11	Q I direct your attention to Page 56.
NG, V	12	
ILDI	13	i have Page 56.
Ő	14	Q Have you read Mr. Weidner's testimony to
RTE	14	understand the significance of the almost straight line
REPO	15	that appears at the bottom of that figure?
	16	A (WITNESS KANE) I have read it sufficiently
ET, S	17	
STRE	18	to understand the significiance of that line.
300 7TH STREET, S.W.		Q Is that almost straight line a proper
300	19	utilization of the actual measured settlement input?
1.1	20	A (WITNESS KANE) It is Staff's position that
	21	
	22	the best data that we would have available to us are
	23	the actual settlements and that the line which is
		indicated by the values in blocks which appear to be
-	24	almost sträight line, are not appropriate.
• 2	25	Q One last question, Mr. Kane. If the line which
		internet and the same. If the line which

21

25

3

MS. STAMIRIS: Can we have that question restated,
 please.

MR. PATON:	Yes	
------------	-----	--

Mr. Kane, let me restate the question. If the
5 line you have referred to were straight, would that eliminate
6 consideration of differential settlement?

7 (WITNESS KANE) If you define differential settle-A 8 ment, as a difference between elevation between points, no. 9 But if we're talking from the standpoint of engineering and 10 the effect differential settlement has on a structure and 11 you assume the structure rotates as a complete unit, as 12 a rigid body, then assuming that, then assuming that the 13 straight line rotation, it would take out the effects of 14 differential settlement.

MR. PATON: That is all my questions, Judge
Bechhoefer. The sections are already in evidence.

17 CHAIRMAN BECHHOEFER: Miss Stamiris or Miss
18 Sinclair, either one.

MS. SINCLAIR: I don't have any questions. CROSS EXAMINATION BY MS. STAMIRIS:

Q Mr. Kane, did you sponsor the section of surcharging of the Diesel Generator Building on 2-24 of the SSER?

A (WITNESS KANE) Yes, I did.

1

3

4

5

6

7

300 7TH STREET, 2.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

21

22

23

24

25

10524

In the first paragraph of that section, the bottom 0 sentence refers to -- well, I will read it: (Reading) 2

> "By December 1978, the largest measured settlements located in the southeast corner of the building had reached 4.2.5 inches which already exceeded the building's initial 40-year settlement prediction of 2.8 inches".

I would like to direct your attention to a certain 8 portion of the December 6th, 1979 order, the OM order for 9 this proceeding which makes a reference to settlement 10 expectations of the Diesel Generator Building and ask you 11 whether it is consistent with that. This is Appendix A 12 under the notice of violation attached to the December 6th 13 order, and I think to clarify for everyone, if you would 14 read all of Section 1(a) out loud, and then I will ask you 15 16 a bout it.

> (Witness complying.) A

(WITNESS KANE) I have read Paragraph 1(a) from 18 A the document that is identified as Appendix A, notice of 19 violation. (Reading) 20

"The FSAR is internally inconsistent in that FSAR Figure 2.5-4(b) indicates settlement of the Diesel Generator Building to be on the order of three inches or FSAR Section 3.8.5.5 (Structural Acceptance Criteria) indicates

settlements on shallow spread footings founded on compacted fill to be on the order of one-half inch or less. The Diesel Generator Building is supported by a continuous shallow spread footing". Q All right. On the basis of that statement in the December 6th order about the half inch of settlement on the shallow spread footing, do you understand that statement to mean that a half inch of settlement was expected for shallow spread footing, according to that section of the FSAR?

A (WITNESS KANE) From this document, I would understand that the FSAR in Section 38, 3.8.5.5 indicates settlements, four shallow spread footings to be a half inch or less.

Q Does that denote any inconsistency with the sentence that I read previously on page 2-4 of the SSER which says that the 40-year settlement prediction for the Diesel Generator Building was 2.8 inches?

A (WITNESS KANE) It does denote an inconsistency. I think there is an explanation of that inconsistency.

When you put a time frame under or around the document that we are referring to, the 2.8 inches that appears in the portion I am sponsoring, is referring to the FSAR and I am not sure of the date, where it is indicated in that FSAR version that the settlement is 2.8 inches.

BY MS. STAMIRIS:

Q But do you understand that both of these measurements although they may be for different purposes and found in different portions of the SSER, address what the 40-year or what the expected settlement prediction is to be for the Diesel Generator Building?

Well, I should say in that case, for shallow spread footings.

A (WITNESS KANE) I would interpret these two statements, the half-inch and the 2.8, to be at two separate times, that to be the estimate of the footings under the Diesel Generator Building.

In other words, I felt it was at one time a half-inch and it was increased to 2.8 inches.

Q So you do not think that prediction of the expected settlements for the Diesel Generator Building footings was increased from a half-inch over the last time to 2.8 inches over the lifetime?

A (WITNESS

(WITNESS KANE) That is correct.

Q And would I be correct in understanding that you don't know -- you can't be certain upon what that was based or you don't have any more details about that change?

A (WITNESS KANE) I have some additional information. It is my recollection, that if you go back

to the PSAR, which precedes the earlier version of the FSAR, that you would find in there a statement that says the settlement that is expected for the footings that are going to be founded on the compacted fill is a half-inch. I think that is the basis for the half-inch.

Q All right. Mr. Kane, at the bottom of Page 2-24 is a statement that says (reading.) "Statement of the surcharge fill was initiated in January 1979", and then the sentence goes on to tell about when it was completed. And there are also some -- there's a table on Page 2-33 that denotes time frames of -- what time frame accounted for before surcharging data and what time frame accounted for during surcharge data.

I would like to show you this document which is Stamiris Exhibit 30 which has been introduced before and also ask, based on your memory, if indeed the actual sand application began in about November of 1978 instead of in January of 1978.

A (WITNESS KANE) This document would indicate that the surcharge line which, if defined, which it is not on this drawing, is defined as the start of the surcharge, then it would be indicated that it is beginning towards the end of November of 1978. I think maybe it would help the record to indicate that it is my recollection that some preparation was made at the site

prior to January and I am talking about placement of some
 fill in preparation for the surcharge.

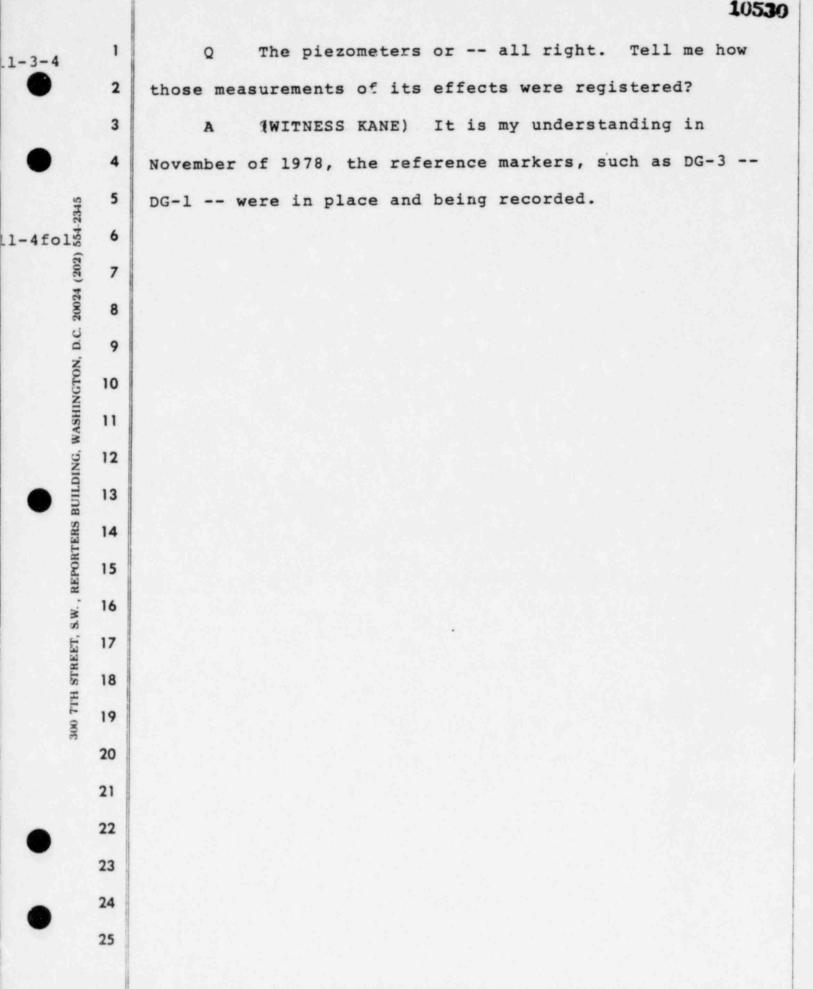

But to some people's mind, that would not be
called surcharge.

Q All right. Mr. Kane, with regard to that, I would just say two or three feet cf sand that was placed in November of 1978 and continued in place until January of 1979, when the increments of sand were increased for the surcharge, considering this two or three feet of sand that was present, would that be significant in computing what I will call base line data for the beginning of settlement at the Diesel Generator Building?

A (WITNESS KANE) No because as indicated on Page 233, we are asking the Applicant to address what I would call, base line settlement data from the time it was initially measured, which is back as far as March of 1978.

Q All right. Then let me first ask you then whether the existence of the, let's say two and a half feet of sand over the area of the Diesel Generator Building for a period of three months, do you think that that would cause some settlement in the diesel generator soils?

A (WITNESS KANE) Yes and it was being observed
 and recorded by surveying methods.

Q And I am sorry if I am repeating myself, but I want to make sure that your statement that it would be of no significance for the analysis, the ultimate surcharge results, includes a consideration of preconsolidation pressures?

10531

A (WITNESS KANE) I indicated that the settlement is significant and I hope I have indicated that this settlement, which is occurring under this two or three foot of layer, prior to the beginning of the surcharge, is being recorded and the Applicant is addressing that settlement back as far as March of 1978.

Q All right. Mr. Kane, at the bottom of Page 233 under the sentence under Darentheses 2, where it says that the Staff has questioned however, the manner in which the measured settlements were used as input for the structural analysis and you -- the NRC goes on to discuss the employment of the best fit straight line methodology to a plot of points, would this be another example of the methodology that is reflected in Staff Exhibit 16?

A (WITNESS KANE) I am not sure I understand your question.

Well if I --

0

A (WITNESS KANE) By what you mean methodology in

Exhibit 16?

Q In Exhibit 16, do you believe that the Applicant was employing a methodology which could be termed a straight line best fit through a plot methodology?

A (WITNESS KANE) The reference here to straight line best fit does not pertain to Exhibit 16. The better figure to be looking at is straight line best fit which is what Mr. Paton referred to on Page 56 of Mr. Weidner's testimony.

Q Yes, I think I have the wrong -- I am sorry. I meant to refer to that page, 56. That has not been identified as an exhibit, has it?

> MR. MILLER: Part of Mr. Weidner's testimony. MS. STAMIRIS: I understand that.

I want you to disregard the questions that I asked and I want to ask you if the instance that you are talking about at the bottom of Page 2-33 is another example of the same type of methodology that is employed on Page 56 of Mr. Weidner's testimony.

WITNESS KANE: The statement that appears on Page 2-33 about straight line best fit, does pertain to the heavy line which is shown on Mr. Weidner's Page 56 testimony.

BY MS. STAMIRIS:

Q Were there other examples of this type of

methodology by the Applicant? By that, I mean,

employment of a straight line best fit through a plot of data?

A (WITNESS KANE) Yes and you could see the figures that pertain to that on Pages 57 and 58 of Mr. Weidner's testimony.

Q And those are the only examples that you are aware of?

9 A (WITNESS KANE) They are the ones that are being
10 referred to on Page 2-33.

Q Now what I want to understand is, whether there are other examples of this methodology of which you are aware in the Applicant's review of the surcharge undertaking.

A (WITNESS KANE) That's a difficult question to answer because it is so broad in that I know a lot of the work that the Applicant has done where he has used straight line -- and I would accept it --

Q I will try to phrase it this way. Are these three examples that you cite on Page 2-33 the only instance of usage of that straight line best fit through a plot methodology which caused you some concern?

23 24

25

A (WITNESS KANE) Yes.

Q Thank you. Mr. Kane, do you agree that three-fourths of an inch or .83 inches represents a

	1	
11-4-4	1	conservative upper bound of differential settlement for
•	2	the Diesel Generator Building to be expected in the
	3	future?
•	4	A (WITNESS KANE) Knowing the dates that that

(WITNESS KANE) The confusion is coming about A 2 because originally the Applicant projected the settlement from December of 1979. Because we had 3 meetings in 1980 and 1981, it was felt unnecessary to 4 be projecting settlements back in December 1979 when we 6 had the actual settlement measurements.

And so it's my understanding that in meetings of 1982 there was an agreement reached with the Applicant that the projected settlement should be from December of 1981 because we had measured settlements up to that date. BY MS. STAMIRIS:

Mr. Kane, do you understand --0

MR. MILLER: Excuse me. I'm not certain that answered the question that you posed.

MS. STAMIRIS: No. I'm going to go back and ask him about what he just said.

BY MS. STAMIRIS:

I want to ask Mr. Kane whether you understand 0 Dr. Peck's prediction of three-fourths inch -- or let's use .83 inches of expected settlement, a differential settlement predicted over the lifetime of the plant.

22 Do you understand that to encompass the time 23 frame from December 1981 until December 20-25? 24 (WITNESS KANE) Yes, that is my understanding. A 25 And do you agree with that prediction of 0

differential settlement?

2 A (WITNESS KANE) For that time frame, yes. 3 Was there any discrepancy over the amount of 0 4 different settlement that occurred from the time when 5 the surcharge was initiated until December of 1981 that 6 was not expected? 7 MR. MILLER: Object. I don't understand the 8 question. But maybe the witness does. 9 MR. PATON: Well, Mr. Chairman, I don't think

that's a proper objection. I think if the witness understands the question -- why don't we ask Mr. Kane if he understands the question.

CHAIRMAN BECHHOEFER: Mr. Kane, do you understand the question?

WITNESS KANE: I wish she would repeat the question.

BY MS. STAMIRIS:

Q Mr. Kane, I mean to ask whether there was any differential settlement which occurred since the initiation of the surcharge in 1979 up until December of 1981 that was unexpected or more than was predicted?

A (WITNESS KANE) The information that we have brought to the attention of the Applicant and Dr. Peck -and that is the settlement which is now occurring because of the dewatering that is going on -- is being

12-1-3

1

2

3

evaluated because it appears to be at a slope that is steeper than what has been predicted by the surcharge program.

10537

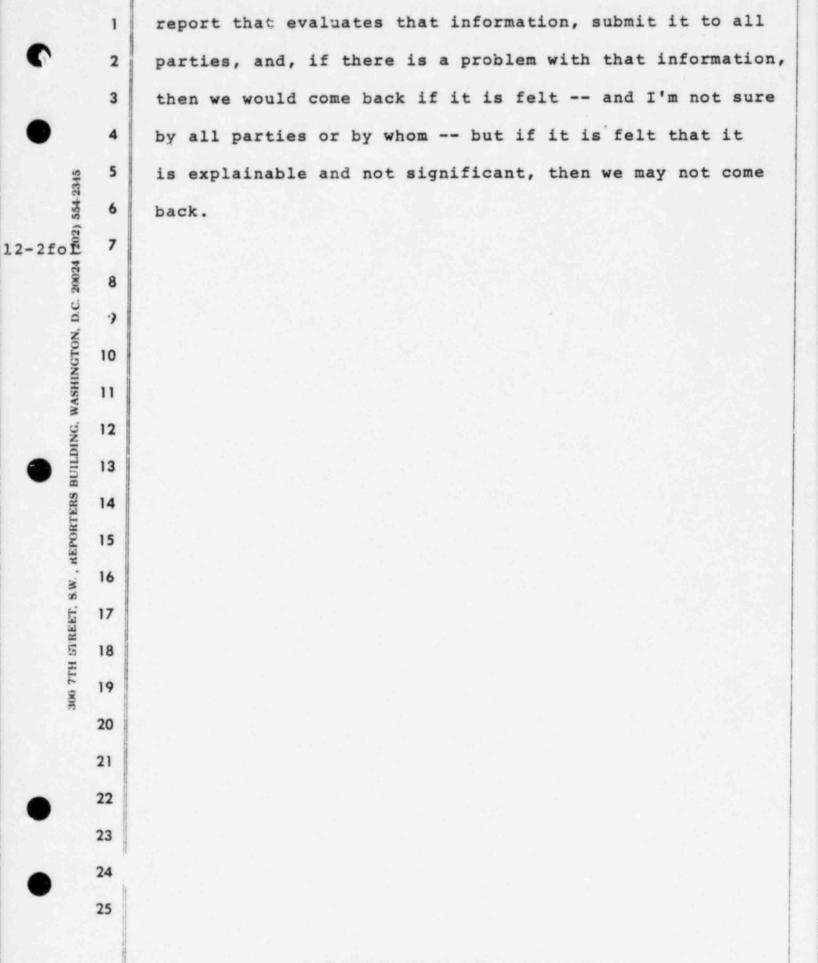

I was not aware that dewatering is below the level that it was when the full recharge test was run. I didn't realize it was below now 592. And that information, that dewatering has to be looked at as a possible reason wa're getting more settlement than I would have anticipated and whether, after having looked at that, in my estimation, we should also be looking at how does that compare to what has been predicted by the extension of the straight line which the Applicant is using for secondary consolidation.

Q Okay, Mr. Kane, I appreciate that answer in that I think I may have left the word differential out the last time I raised that question.

I understand that we are -- is it your understanding on the subject that you just discussed that both Dr. Peck and the NRC Staff will be coming back to this Board and the parties with some sort of resolution or further testimony on the subject of what settlement is now occurring?

A (WITNESS KANE) Based on discussions I heard
this morning, it's my understanding that the Applicant
will look at the information, write a report, a letter

10538

10539

back	1	Q Will the NRC you will be one of the people who
•	2	will be making that determination or evaluation of the data
	3	supplied by Consumers, won't you?
•	4	A (WITNESS KANE) For the Staff, yes.
2000	5	Q Does the NRC Staff plan to inform the parties of
WASHINGTON D.C. 90094 (909) 554 9945	6	their evaluation of that data?
COC. 1	7	A (WITNESS KANE) I would be happy to, but I feel
-006	8	maybe Mr. Hood would like to address that.
D D D	9	MR. PATON: Mr. Chairman, I will answer the
INCTO	10	question and ask Mr. Hood to correct me if I am wrong.
WASH	11	We will be very happy to respond indicating whether we
		see any significance in the information.
	13	WITNESS HOOD: I agree with that. My pause was
CLERS	14	due to ascertaining the question. I'm afraid I was not
S.W., REPORTERS BUILDING	15	that attentive at the moment.
S.W.	16	CHAIRMAN BECHHOEFER: Mr. Hood, would that type of
tEET.	17	information give rise to a portion of a new SER supplement,
300 7TH STREET.	18	or would it only do so if it created further problems?
300 71	19	MR. PATON: Mr. Chairman, for example, if the
	20	information was not significant, could we get that question
	21	CHAIRMAN BECHHOEFER: Right.
•	22	MR. PATON: I mean, I assume if it's not significant
	23	it would not
•	24	WITNESS HOOD: May I have a moment?
	25	The question involves evaluation of public data.

10540

That evaluation is such that it causes us to alter any conclusions made in the SER or causes us to -- indicates the need for any change in something that is presently in that SER or lends significant new information to what is stated in the SER, then it would be the subject of a further supplement to the SER.

I guess my answer to you, it depends on the assessment we make of the data.

BY MS. STAMIRIS:

Q Now, Mr. Kane, to go back to the other thing I was asking about in terms of differential settlements, has there been any differential settlements which has occurred since the preload which is more than was expected?

A (WITNESS KANE) Staff Exhibit 16 presents the settlement history after 9-14-79 for one reference marker.

That information, along with a lot of other information for the other markers, has to be evaluated and the extent of differential settlement evaluated.

19 That has to be done. That has not yet been done.
20 Q So, by that answer, would I be correct in under21 standing that you intend to evaluate the differential
22 settlement between the various points of the most recent
23 data while you are reviewing the settlement data?
24 A (WITNESS KANE) That is correct.

MS. STAMIRIS: Thank you.

17

1 CHAIRMAN BECHHOEFER: Mr. Kane, has the Staff 2 received any other reports of post surcharge removal settle-3 ment which -- for which the slope differs significantly from 4 that which has been predicted?

5 WITNESS KANE: The information that we were pro-6 vided at the last hearing, which Staff Exhibit 16 is one 7 of those drawings -- there's a large amount of the data 8 that was provided has the similar behavior as we see on 9 Staff Exhibit 16.

10 So the settlement that we're getting on the 11 dewatering is not just occurring at that marker, it's 12 occurring at many of the markers.

CHAIRMAN BECHHOEFER: I see.

BY MS. STAMIRIS:

15 Mr. Kane, that information which was provided to Q 16 the NRC Staff, of which Staff Exhibit 16 is one example, was provided at the specific request of NRC, was it not?

18 (WITNESS KANE) It was a specific request but A 19 it was done in a very formal manner. I was at the hearing 20 in November. I was trying to understand when additional 21 settlement has occurred, and I asked a representative from 22 the Applicant, and I think I was given the data the next 23 day.

25

24

MS. STAMIRIS: Thank you.

Would there be a Staff witness at another time to address the structural aspects of the Diesel Generator Building and the surcharge?

MR. PATON: Mr. Rinaldi will be here this week
to address the structural aspects of the Diesel Generator
Building.

MS. STAMIRIS: Okay.

WITNESS HOOD: Mrs. Stamiris, may I go back to one of your earlier questions and attempt to determine if some supplementation is necessary or not?

MS. STAMIRIS: Please.

WITNESS HOOD: You earlier asked Mr. Kane his opinion in regards to three-quarter inches of additional settlement, and I believe he did answer that question.

I know there's also a discussion in the hearing about three-quarters of an inch versus p83. inches, and I'm not sure in the particular question you asked if you intended to infer any difference between three-quarters of an inch and what was called almost three-quarters of an inch.

> MS. STAMIRIS: Well, I did not intend to. WITNESS HOOD: Thank you.

CHAIRMAN BECHHOEFER: Mr. Hood, do you draw any significance to that difference? Because I think I may be

the fault behind the .83 getting discussed. So --

WITNESS HOOD: No, sir, I don't.

CHAIRMAN BECHHOEFER: Do you agree with
Dr. Peck when he saw no essential difference between --

5 WITNESS HOOD: I don't attribute any particular
6 significance to the difference, no, sir.

BY MS. STAMIRIS:

Q Going back to that question on the differential settlement, Mr. Kane, I think I got off the track in my questioning and I don't know if I ever went back. If I did, I can't remember your answer. But the original question and the one I want to ask you now is: Do you agree with Dr. Peck's estimate of .83 inch of expected differential settlement over the life of the plant? Do you agree with his prediction for differential settlement?

A (WITNESS KANE) I'm going to put the time fr he that I understand is -- that goes with that prediction. And it's my understanding the time frame is 12-31-81 to the end of the plant operation, which is 12-31-2025.

With that time frame, and if I'm being told the differential settlement is three-quarter of an inch or .83 of an inch, do I feel that it is a -- or do I agree with that value to be used for differential settlement, then I would say yes.

ALDERSON REPORTING COMPANY, INC.

300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

CHAIRMAN BECHHOEFER: Well, let me ask you this
 right now. Do you think some different time period should
 be used in predicting differential settlement over the
 life of the plant?

WITNESS KANE: No, sir, because we have some records now that tell us what the differential settlement has been up to that time, so we have that by measurement. And what we're trying to do now is estimate the amount of differential settlement we are going to have for the plant life, so there's no need to go back beyond that date.

BY MS. STAMIRIS:

25

200 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

Q Mr. Kane, in your geotechnical assessment of the surcharge at the Diesel Generator Building, to what extent did you rely on finite element studies?

A (WITNESS KANE) Not at all.

12-4,pjl

11.

	1	Q Would that go more to the structural aspects of
	2	the surcharge on the Diesel Generator Building?
	3	A The structural would not be evaluating the sur-
)	4	charge. What the structural will be doing is evaluating
345	5	the settlements which were induced by that surcharge.
) 554-2	6	Perhaps it's clear in your mind, but it's not
1 (202	7	clear in my mind. The settlements that occur came from
2002	8	the surcharge and before and after. Those settlements are
N, D.C	9	used in a structural analysis which would be the finite
NGTO	10	element analysis.
VASHI	11	But to evaluate the adequacy of the surcharge
ING, V	12	program no finite element analysis was made.
BUILD	13	WITNESS HOOD: I believe Mr. Kane meant to say
W., REFORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345	14	that the structural would be considering the effect of the
LEPOR	15	settlement.
S.W. F	16	BY MS. STAMIRIS:
	17	Q That was what I was wondering about. And then that
300 7TH STREET,	18	would be addressed by Mr. Rinaldi for the NRC Staff?
300 7T	19	A (WITNESS HOOD) Yes.
	20	A (WITNESS KANE) It is the position of the NRC that
	21	the settlements would rightfully or normally be the respon-
,	22	sibility of the geotechnical engineer. That is the input
	23	that we are to evaluate and indicate to the structural
,	24	engineer its adequacy, and that information then is used
	25	in the structural analysis.

12-4,pj2

0

•

•

1	Q Will you be here or be taking the stand with Mr.
2	Rinaldi as a part of the structural analysis also?
3	MR. PATON: Mr. Kane will be here. Wheher he's on
4	the stand or not, I don't think so. He may be, but he will
5 6 7 8	be here.
6	BY MS. STAMIRIS:
7	Q Well, Mr. Kane, I'll ask you whether you are aware
8	of the recent findings of the NRC Staff from Region III
9	regarding hardware in the Diesel Generator Building. And
10	are you aware in a general way of the findings I'm referring
11	to that took place roughly in November of 1982?
12	
13	i i i i i i i i i i i i i i i i i i i
14	been present in a conversation which indicated there were
15	some different problems based on Region III's inspection.
16	I do not know any of the details.
17	MR. PATON: Mr. Chairman, we have a list of the
18	items of hardware that were involved in the QA non-ccmpli-
19	ances, and if it's of any assistance to the Board we would
20	be glad to read that list.
21	I think Mrs. Stamiris is wondering if there's
21	any connection with that list and the structural adequacy
23	of the building. To my knowledge, there is none, but we
23	will read the list if the Board wants us to do that.
24	(Discussion had off the
	record.)

12-4,;j3

1	WITNESS HOOD: Mrs. Stamiris
2	CHAIRMAN BECHHOEFER: Well, I was going to say
3	you could read the list, if you want.
4	MR. PATON: Yes, there are only nine or ten items.
5	It won't take that long.
6	Miss Wright will do that.
7	MS. STAMIRIS: Miss Wright, would you wait for
8	just a minute, please, until I find the reference here.
9	MS. WRIGHT: Sure.
10	MS. STAMIRIS: Thank you.
11	MS. WRIGHT: The first item is structural steel
12	for the HVAC intake fans and support, monorail, the exhaust
13	pipe hangers. That's the third item.
14	The fourth item is the exhaust pipe.
15	The fifth item is the exhaust pipe silencers.
16	The diesel generator I'm sorry; the sixth item is
17	MR. MILLER: Could you go a little slower, please.
18	MS. WRIGHT: Sure.
19	MS. STAMIRIS: After the exhaust pipe, which was
20	number
21	MS. WRIGHT: Would you like for me to start over?
22	CHAIRMAN BECHHOEFER: Yes.
23	
24	MS. STAMIRIS: And number them, please, as you read them.
25	Leau chem.

	MA WATCHE Complex
'	MS. WRIGHT: Surely.
2	The first item is the structural steel for the
3	HVAC intake fans and support.
4	The second item is the monorail.
5	The third item is the exhaust pipe hangers.
6	The fourth item is the exhaust pipe, and the
7	fifth item is the exhaust pipe silencers.
8	The sixth item is the diesel generator control
9	panels.
10	The seventh item is the diesel generator air
11	start piping and hangers.
12	CHAIRMAN BECHHOEFER: Air start?
13	MS. WRIGHT: Yes. The eighth item is the
14	structural steel, which is unrelated to the structural
15	integrity of the Diesel Generator Building but as it is
16	used as an attachment point for equipment.
17	The ninth item is the electrical braceways
18	and wirings.
19	That's all.
20	CHAIRMAN BECHHOEFER: Okay.
21	MS. STAMIRIS: Well, I guess I won't ask any
22	other questions at this point on that.
23	MR. PATON: Mr. Chairman, just for clarification,
24	there were one or two other items, but they have nothing
25	to do with the Diesel Generator Building. Do you want us
	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 20 21 22 23

to name the other items?

CHAIRMAN BECHHOEFER: Well, why don't you,
just to keep them together.

MS. WRIGHT: Okay. There was chipping of the
containment wall and there were findings regarding cooling
pond riprap.

MS. STAMIRIS: Just to clarify while we're on this subject, when I was taking notes of Mr. Brunner's listing of items from this same inspection I had written down the words "beams, plates and framework." And those sound to me like they could have possible structural application. And I guess I would like the NRC to check out anything to do with beams, plates or framework that --

MR. PATON: We've done it, Mr. Chairman, we have been advised that none of these items -- your question is whether any of these items can affect the structural adequacy of the Diescl Generator Building?

MS. STAMIRIS: Well, that's what I want to -yeah, that's where I'm going.

And you have been advised that --

MR. PATON: I have been advised that there is no direct connection. Now, as I was indicating to the Board, further investigation may reveal some connection less than direct, but my information now is there is no direct connection.

CHAIRMAN BECHHOEFER: Let me ask Mr. Kane just one question.

Could problems -- I don't know what they are -with cooling pond riprap affect the potential settlement of the Diesel Generator Building?

WITNESS KANE: Not having seen any of these items that have been identified, I don't think I should answer. But it seems to me it could only be remotely possible.

It's my understanding that the riprap that is being discussed is on the cooling pond, which would not be a factor on the Diesel Generator Building.

CHAIRMAN BECHHOEFER: Thank you.

MS. STAMIRIS: I'll just try and do this to clarify in my own mind, but, Mr. Brunner, do you have any reference for the listing of beams, plates and framework at the Diesel Generator Building that you can tell me where that came from that you were reading?

MR. BRUNER: I was reading a list that was drawn up by the company, and I can't really tell how those items relate to the items that were read by the NRC Staff except that I assume that they were probably included in one of the items the NRC Staff has listed.

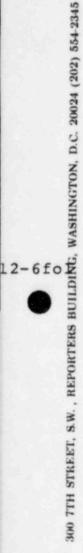

And, as I said, at the time of the phone call, I don't have any knowledge that any of the items on the

12-5-4

list affect the structural integrity of the Diesel Generator Building.

WITNESS HOOD: Mrs. Stamiris, perhaps it would be appropriate for me to comment. I do have a fair understanding of the inspection items.

There is nothing in the inspection, to my knowledge, that is re'ated to the basic structural integrity of the Diesel Generator Building or any other structure. Nor is there anything in the inspection items that relate to soils or soil settlement with what you would call geotechnical matters.

300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

BY MS. STAMIRIS:

Q Mr. Hood, when you made that statement, do you mean to say that there were no specific instances found in this inspection of any -- well, that there were not any findings which could have affected the structural integrity of the building or the geotechnical things as opposed to findings of improper methodology that -- let's skip that and let me give you an example that would --

MR. MILLER: Excuse me. I really kind of object to this. This is really a digression.

We've all agreed that the inspection report is going to be out later this month. It's going to be available for everybody to see, and there's going to be testimony on it either in the month of February or sometime after that.

Having characterizations of the document that's not yet written by a variety of witnesses and attorneys seems to me to be very unproductive.

MR. PATON: Mr. Chairman, I agree. I think it's a very unsatisfactory way to go.

MS. STAMIRIS: I'm not asking questions about the document at this point, I just want to get some assurances how it will be handled in this hearing.

> I just want to ask that if, for example --MR. PATON: I'll answer that.

10553

It's an inspection report which we intend to put before this Board, and I assume there will be an evidentiary session concerning it as part of the QA hearing.

MS. STAMIRIS: Well, I think I can be correct in assuming that if after having seen the document and reviewed it is a part of the QA hearing, if there would be implications, let's say, involving the structural steel and the way that this was analyzed in some way, which we found out at some time later did have some indirect implications for structural integrity at the Diesel Generator Building that we would not be closed off from coming back and --

MR. PATON: That is up to Judge Bechhoeter, if you can convince him that it is new information that is relevant to his findings and he decides to hear it, that's up to the judge.

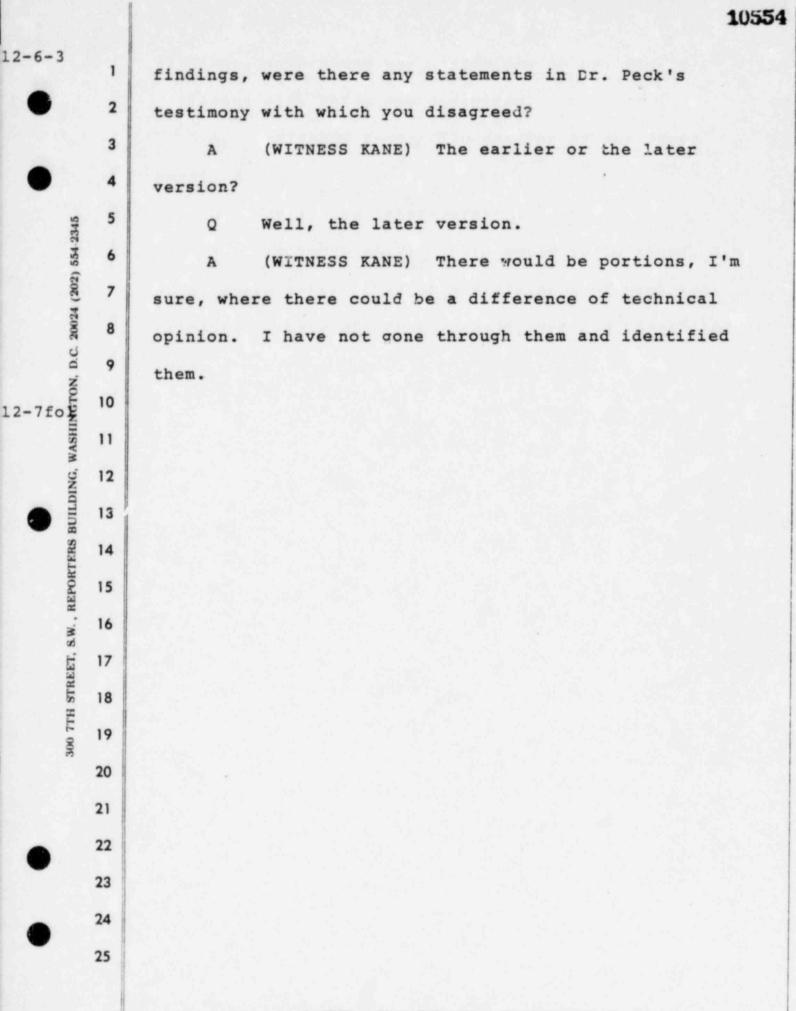

MS. STAMIRIS: Okay.

CHAIRMAN BECHHOEFER: We certainly won't decide it until we see the report.

MS. STAMIRIS: Okay.

BY MS. STAMIRIS:

Q Mr. Kane, I'd like to ask you for your opinion of a few of the things in Dr. Peck's testimony and -well, Mr. Kane, were there any findings in -- or, not

Mr. Hood has just asked me, in my opinion, are they significant to our conclusions, and my answer would be no, because we were able to resolve our differences by independent ways.

MS. STAMIRIS: Okay. Well, I'll skip the questions I was going to ask you about whether you disagreed with Mr. Peck.

I don't have any other questions from Mr. Kane at this time.

CHAIRMAN BECHHOEFER: Okay, Mr. --

MR. MARSHALL: I would like to ask a few questions, not very many, because the hour is late, but there is -- I'd like to have both of you clarify a couple of things for me.

R CROSS-EXAMINATION

BY MR. MARSHALL:

Q One is for Mr. Kane. Am I to understand this afternoon that the geotechnical men on a large structure such as the Diesel Generator Building do the formal work at the start for the basis of the structure, for the basis, for the structural work to be done to begin with, foundations.

MR. PATON: Mr. Chairman, could I ask that the question be read back or repeated. I didn't follow every bit of --

12-7-2

10556

	1	CHAIRMAN BECHHOEFER: Have you finished your
•	2	question?
	3	MR. MILLER: Let's find out if the witness
•	4	understands it, Mr. Paton. You said yourself that's all
345	5	that's important.
554-2	6	MR. PATON: I didn't say I didn't understand it.
1 (202)	7	I asked that it be read back.
20024	8	MR. MILLER: The look on your face spoke
, D.C.	9	volumes:
AGTON	10	MR. PATON: Are we going to get into those
ASHD	11	games?
ING, W	12	I'd like to have the question read,
autro 🌒	13	Mr. Chairman.
TERS H	14	(Question read.)
S.W. , REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345	15	WITNESS KANE: I don't perceive a question in
.W. , R	16	what I just heard.
	17	MR. MARSHALL: Beg your pardon?
H STR	18	WITNESS KANE: I don't understand your question.
300 7TH STREET,	19	BY MR. MARSHALL:
	20	Q Well, today it was my understanding that
	21	Dr. Peck stated that the geotechnical men done the
	22	I'll call it the survey of the ground work before a heavy
•	23	structure like this is constructed they do an analysis
	24	on it, they see whether they go in first and explore it
•	25	to see if it's going to withstand the weights, and so
r B 3fol		forth. Are you in agreement with that? ALDERSON REPORTING COMPANY, INC.

13-1,pj1

10557

		WITNESS KANE: I am not sure I heard everything
	2	that you have indicated that Dr. Peck has said, but I'll
	3	answer your question by saying this. Does a geotechnical
	4	engineer become involved when a large structure is going to
345	5	be built by trying to understand the foundation it is
20024 (202) 554-2345	6	going to be built on, and I would say yes.
1 (202)	7	BY MR. MARSHALL:
20024	8	Q Then my next question is, in the instant case,
300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C.	9	did the geotechnical men that made the original survey of
	10	this particular job, were they Bechtel Corporation geo-
	11	technical men or were they NRC men or were they Consumers
	12	Power Company men?
	13	A (WITNESS KANE) There are a couple of words I
	14	would like to clarify. You said original and you said
	15	survey. Are you talking about survey as being what a geo-
	16	technical engineer does?
EET, S	17	Q In that same context, yes.
I STRI	18	A (WITNESS KANE) And if you are saying original,
800 TT	19	why I think we ought to go back to the first one that per-

22

18 (WITNESS KANE) And if you are saying original, A 19 why I think we ought to go back to the first one that per-20 formed it, and it's my recollection neither the NRC nor 21 Bechtel was part of the original.

0 Bechtel?

23 (WITNESS KANE) It is my understanding maybe A 24 Bechtel -- I understand it was -- we are talking about the 25 geotechnical original investigation and I don't know whether

13-1,pj2

...

10558

		· · · · · · · · · · · · · · · · · · ·
	1	Bechtel was involved with that.
	2	Q Now I still are you saying that you think
	3	Bechtel was involved with that original work?
	4	CHAIRMAN BECHHOEFER: He said just the opposite.
45	5	MR. MARSHALL: That is what I wanted to know.
20024 (202) 554-2345	6	Then would you please tell me who you think were
202)	7	the ones who did the very first geotechnical analysis of
0024 (8	that work or whatever.
		chat work of whatever.
WASHINGTON, D.C.	9	WITNESS KANE: It is my recollection that the
INGTO	10	original geotechnical work was done by James & Moore.
WASH	11	Q But who were they employed by? Bechtel or Con-
	12	sumers Power Company?
BUILDING	13	A (WITNESS KANE) I do not know.
	14	Q Thank you. Now I have a question for you, Mr.
EFUK	15	Hood.
W. , R	16	A long time ago on your direct testimony, you said
E1. 0	17	that if you had your way as to that generator, that Diesel

16

17

18

1 guarantee that it is safe or not safe.

Would you accept that?

(WITNESS HOOD) Mr. Marshall, I am not sure I A can answer that in the abstract, when you say structural steel.

6 Well, I am saying would any type of steel that 0 doesn't reach the requirements of the satisfaction of what 8 the requirements are -- becomes inferior -- let's use that word -- and you know it is inferior. Everyone knows it 10 is inferior. But, they can't find the fabricator who did it in the first place. Is that -- would a requisition trace it back to the source? If that -- would you accept that as a safety thing, to allow it to go back or would you want it tore out -- what would you do with it?

A · (WITNESS HOOD) It is a very difficult question to answer in the abstract. It depends on that particular function of that structural steel. I assume, for example, you are talking about the safety related structure.

19

0

300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

That's true, true.

20 (WITNESS HOOD) And quite clearly, there are cases A 21 where we have a requirement of tracing equipment and 22 structural steel.

23 But to say that a given non-compliance in the 24 area of a structural number would always require a replace-25 I don't think I can make that statement. It is the ment;

13-1,pj4

kind of thing that our inspectors would be concerned about and would cause the generation of a non-compliance if the requirements were there.

But I cannot give you an answer in the abstract of what the outcome of what such a non-compliance would be. I can tell you that generally, such items are of concern to the Staff.

Q What I'm saying is this. To offset and to climb out from under, Mr. Miller says, I've tried everything I can but I just can't come up with those requisitions. We can't trace it back to the fabricator. Are you going to accept that?

300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

1 MR. PATON: I object. That question doesn't seem that. 2 to be connected with anything. 3 MR. MARSHALL: It does, it certainly does. It 4 is a safety-related proposition. MR. PATON: Could I ask, Mr. Chairman, if we are 5 20024 (202) 554-2345 6 in fact referring to any specific matter that is going on 7 right now? 8 CHAIRMAN BECHHOEFER: Are you referring to any-REPORTERS BUILDING, WASHINGTON, D.C. 9 thing specific --10 MR. MARSHALL: Yes, I am. I read just recently 11 where there is something that come up down there, and they 12 said they can't trace it to a source. It has been left, 13 as he says, hanging in the abstract. I would like to know 14 when they get the thing hanging up by the neck somewhere. 15 MR. PATON: Mr. Chairman, I submit that the 300 7TH STREET, S.W. 16 question is too vague to have any meaning for this record. 17 CHAIRMAN BECHHOEFER: I can't tell whether it 18 has any relationship to the testimony --19 MR. MARSHALL: We only have one Diesel Generator 20 that is sinking, and if they are going to let it sink right 21 on the site, I don't care anymore about that, about that 22 steel that is in there, but if they are not --23 MS. STAMIRIS: Excuse me, I was going to ask a 24 recross question based on this at a later time, and if I 25 could ask it now, maybe it would help Mr. Marshall out.

CHAIRMAN BECHHOEFER: Well, we are trying to determine whether any of this is relevant to their testimony on settlements --

MS. STAMIRIS: I would like to try to tie it in, although it necessarily has to be hypothetical.

Mr. Hood, I would like to ask you if you found that you could not determine that adequacy of the material in the structural steel of the Diesel Generator Building, due to improper qualifications of that material and equipment, how would you -- if you could prove that it was adequate just as you couldn't prove that it was inadequate, how would the Staff go about resolving whether indeed that structural steel was adequate or inadequate?

MR. MILLER: I am going to object. I simply think that there is no foundation in the record for any assertions that the structural steel and the Diesel Generator Building -- at least insofar as it relates to the structural adequacy of the structure itself, is somehow inadequate or is improperly qualified or anything else.

MR. PATON: I would like to object because the question is based on a lot of hypotheticals. And if she finds it is inadequate, in what way is it inadequate. You can't be sure -- it raises so many questions that the answer, I don't think, can help the Board and requires Mr. Hood to contemplate all possibilities and I just don't

think it meaningful.

MS. STAMIRIS: Well, I agree that it is hypothetical because I said it was hypothetical in the first place. And perhaps the most expedient thing would be to wait until we have some specifics.

CHAIRMAN BECHHOEFER: I think you would have to. There will be, undoubtedly, witnesses here when we get more specific matters. I assume you are trying to relate that to the future inspection report; is that correct? MS. STAMIRIS: Yes.

11 MR. MARSHALL: Laying a foundation, that's all. 12 CHAIRMAN BECHHOEFER: All I have heard now to 13 date is that the structural steel that is involved is 14 unrelated to the integrity. Well, the questions would have quite different answers so I think we will have to sustain the objection at this time, at least.

Do you have further questions?

MR. MARSHALL: I have no further questions. Everything has been adequately - I have nothing further to say. I can go home now.

21 CHAIRMAN BECHHOEFER: Mr. Miller might want to 22 say a few things.

23 MR. MILLER: I have just a few questions, 24 actually.

23

24

300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

BY MR. MILLER:

2 Q Can you identify for us who that person is?
3 A (WITNESS HOOD) I am.

Q And Mr. Kane, would you turn to Page 3-25, supplement to the SER. I would like to call your attention to a numbered paragraph 4. Are you the principal author of those two subparagraphs, 4-A and 4-B?

A (WITNESS KANE) I am not.

Q Do you know who is?

A (WITNESS KANE) It is my understanding it is Mr. Rinaldi, but he may have had assistance from his consultants.

Q Do you agree with the statements that are found in Paragraph 4-A and Page 3-25 that the actual measured settlements from September of 1979 to December 1981 occurred mainly because of dewatering? I paraphrased the sentences there but may I ask whether you agree with that conclusion?

A (WITNESS KANE) As I indicated, I did not make the statements, so that I would have to do if I were going to say I agree with it, I would want to go back and look at the settlements during that time and estimate what is due to dewatering and what is due to secondary consolidation.

25

Q Do you recall what the magnitude of the

13-3-3 1 settlements that were actually measured between September 2 of 1979 and December 1981 were? 3 A (WITNESS KANE) I think they are on the order 4 between one and a half to two inches. 5 JUDGE HARBOUR: That specific time period in 300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345 6 Paragraph 4-A, that is September 1979 and December of 7 1981? 8 WITNESS KANE: That is what I understood he 9 asked me. 10 BY MR. MILLER: 11 In fact, Text Figure 7 shows settlement about Q 12 a half-inch; is that correct? 13 (WITNESS KANE) That is correct. A 14 And are you in agreement that those are the 0 15 settlements that were measured during the period 16 September 14, 1979 and December 31, 1981? 17 (WITNESS KANE) In the testimony that I have A 18 prepared and the orders that I have attended, I have 19 addressed the settlement during this time frame. And if 20 these are the same values as I would have a record in my 21 files, yes, I would agree. 22 The problem is, on my testimony, I do not 23 recollect. In my testimony, the time frame that we were 24 analyzing, I would like to look at my testimony. I think 25 there is a difference in the time frame from what has

13-3-4

been indicated there --

Q But there certainly is a difference in the time frame on the table on Page 2-33. That is, there is no time frame that corresponds with the periods, the September 1979 and the December of 1981; is that correct?

A (WITNESS: KANE) That is my problem. I know I faced the settlements during the time frame that you are asking me at one time and we had reached an agreement with the Applicant on those values.

Now as I see the values, it is, to the best of my recollection, they are in that area, in the area of around a half-inch.

17

18

19

20

21

BY MR. MILLER:

2 0 All right. As you sit here today, Mr. Kane, do 3 you have an opinion as to what caused that approximate 4 half-inch settlement in the time frame, September 1979 to 5 the end of December, 1981?

A (WITNESS KANE) I would like to look at the figure that gives me the time of the recharge test, and that would be Text Figure 6.

> 0 Do you have a copy with you?

A (WITNESS KANE) I do, yes. The draw-down for the recharge test appears to be concluded at the end of December of 1981 and therefore, I would agree that those settlements are mainly due to lowering of the water tables.

All right. Just one more question in response Q to some questions from Ms. Stamiris with respect to Staff Exhibit 16, is it fair to say that your working hypothesis as to the cause of additional settlement has been experienced at Point DG-3; is that, dewatering has caused the water table to be lowered from 15 feet lower than it previously has been drawn down?

22 (WITNESS KANE) All I know right now is that A 23 the water table is below Elevation 592. I do not know 24 -- I cannot recall the figure that it is right now. So 25 if you are saying it is before it was lowered to 592 for

1 the recharge test and if you are telling me now it is 15 2 feet below that, you may be correct; I do not know. 3 If you will assume with me that that is the 0 4 case, would that be a good working hypothesis on which to 5 proceed as a reasonifor the additional settlement that is 300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345 6 being experienced at DG-3? I believe you testified 7 elsewhere. 8 (WITNESS KANE) Would it be a good reason to A 9 believe that that is what is causing the settlement? 10 Well would that be a way to proceed in your 0 11 investigation as a hypothesis that would cause additional 12 settlements being experienced? 13 (WITNESS KANE) Very definitely. A 14 MR. MILLER: Mr. Chairman, we have an . 15 understanding with the NRC Staff, I believe, that insofar 16 as Mr. Kane has testified on matters that touch the 17 structural analysis of the Diesel Generator Building, his 18 cross-examination on those subjects will proceed following 19 Mr. Rinaldi's appearance. 20 MR. PATON: Mr. Chairman, that is pretty close.

21 CHAIRMAN BECHHOEFER: Following or as a panel? 22 MR. MILLER: Well that is up to Mr. Paton. 23 MR. PATON: We would not plan to do it as a 24 panel -- no, we do not plan it but I don't have any 25 strong objection to it.

3-4-3		
	1	The only distinction I would want to make is
0	2	we agree generally, but Mr. Miller indicated this was a
	3	question concerning structural analysis and that's a
•	4	difference that we have. We construe this as having more
345	5	to do with geotechnical expertise as opposed to
) 554-2	6	structural expertise. But I think it is a matter involving
\$ (202)	7	Mr. Weidner's testimony.
2002	8	MR. MILLER: And how the settlement data were
N, D.C	9	used in the structural analysis.
WASHINGTON, D.C. 20024 (202) 554-2345	10	MR. PATON: And how accurate the settlement data
NASHI	11	is in the first place.
ING, V	12	MR. MILLER: Certainly.
BUILD	13	MR. PATON: But the mattersiinvolving
REPORTERS BUILDING.	14	Mr. Weidner's testimony that I asked Mr. Kane about, yes.
REPOR	15	We agree.
	16	MR. MILLER: I have no further questions.
300 7TH STREET, S.W.	17	WITNESS KANE: I would like to indicate that
H STR	18	when that session would come up that I would also be
300 7T	19	expecting Mr. Singh to come with me.
	20	MR. MILLER: Yes, thank you.
	21	JUDGE HARBOUR: I have just a question of
•	22	clarification relating to what you were just asking
	23	Mr. Kane.
	24	Have you made an attempt to determine the rates
-	25	of substance that is shown on Staff Exhibit 16 for the last

few months that are given there, and do you know what the rate of settlement is?

WITNESS KANE: For the reason Dr. Peck and others from Bechtel were unable to do it from last night until this morning, and that is we are working with two different drawings and two different scales and we are trying to pick out points. I don't have before me a legible drawing that shows me the dewatering. So to answer your question, I may attempt, but it is tied to all of those limitations.

JUDGE HARBOUR: Mr. Miller gave you some assumptions as to the way to go. But if the rate of settlements per log unit of time that's shown as the total on that, is for assumptions twice the rate of settlement per log unit of time, that is attributable to secondary consolidation, does that mean that the settlement is roughly half attributable to each dewatering and secondary consolidation or is that too long a question?

WITNESS KANE: I am not sure about it being equal to half. But what I feel has to be looked at is first of all, is your half coming because you understand the slope is twice as deep in Exhibit 16?

JUDGE HARBOUR: That's correct.

WITNESS KANE: If you look at the two graphs, that may be true. But they are not part of the same --

JUDGE HARBOUR: If one draws a line through the last few months of data and extrapolates that line out to above unit of time, then it ends up being two and a half -it approaches two and a half feet per log cycle of time which is twice the one and a quarter --

WITNESS KANE: Two and a half inches per log? JUDGE HARBOUR: Yes, correct. But assuming that that's the case, then does -- would that mean -- that is the point I am trying to get clarified in my own mind, would that mean that half the settlement was attributable

to secondary consolidation and half was attributable to 1 dewatering or would all of it be due to dewatering? 2 3 WITNESS KANE: It would be my guess that it would not be equally half, that the smaller portion -- and we 4 5 are not talking about the time frame for that dewatering 300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345 occurring. The secondary consolidation would be much more 6 7 of a part being caused by dewatering. 8 JUDGE HARBOUR: I don't have any further questions. 9 EXAMINATION BY THE BOARD 10 BY CHAIRMAN BECHHOEFER: Mr. Kane, I have a few 11 different subjects I want to ask questions about. 12 Do you agree with Dr. Peck that transitory loads 13 and particularly, earthquakes do not induce appreciable 14 consolidation? 15 A (WITNESS KANE) For cohesive, and that would be 16 clay-type materials, yes. 17 0 Well, what about granular materials? 18 (WITNESS KANE) It would depend on the condition A 19 of the sand. When I say condition, I am talking about its 20 state of looseness or density under earthquake loading. 21 For the loose end, it could be a very significant settlement. 22 Dr. Hendron addressed -- and Staff is in agreement with 23 the amount of settlement that has been estimated to occur 24 for the sands and on both sides of the Diesel Generator 25 Building.

10574

1 Well, aside from the ones that Dr. Hendron --0 2 or aside from Dr. Hendron's estimates, you agree that if 3 you had an earthquake that would not -- or do you agree 4 whether there would be any affect on the further settlement, 5 300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345 say after such an earthquake? 6 (WITNESS KANE) Yes, there would be. A 7 0 And the rate of further settlement, I should say? 8 A (WITNESS KANE) The settlement in a cohesionless 9 soil such as sand, would be relatively rapid. It would not 10 take a longer period of time. It would occur within day .. 11 JUDGE HARBOUR: Is this relative to the occurrence 12 of the earthquake you are talking about now? 13 WITNESS KANE: There's the magnitude of the 14 earthquake factor in that amount of settlement? 15 JUDGE HARBOUR: No, the question here -- I fore-16 see the difficulty in during the earthquake and after the 17 earthquake -- the question was -- I wasn't sure that I was 18 hearing the answer from you. Would you ask the question 19 again?

20

21

22

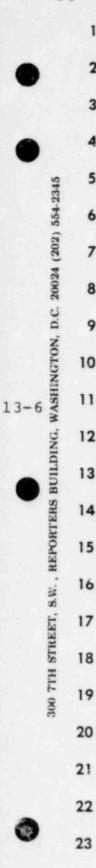

23

24

25

BY CHAIRMAN BECHHOEFER:

Q Well, I have first asked whether the earthquake itself would result in further consolidation during the earthquake and then I later asked whether following an earthquake, and let's assume it is the shutdown earthquake, it would be any change in the rate of consolidation from

then on.

(WITNESS KANE) There would be settlements that A would occur with the loadings of the earthquake. That, there would be some -- I believe some excess poor pressures. I'm assuming now that we are not allowing liquifaction to occur and we are just talking about shaking from the sand deposit. There would be some additional supplement which would occur after the earthquake. But that would be in a very short period of time and then after that, there certainly would be a decline in the rate of settlement.

BY CHAIRMAN BECHHOEFER:

2 Back to what was originally predicted or 0 estimated?

(WITNESS KANE) Actually having shaken down the A sand to a denser condition, you would be getting less settlement that you would have had before.

7 Mr. Kane, what would be the effect, both at the 0 8 time of the earthquake and later in the future on the 9 rates of differential settlement that we have heard about 10 quite considerably at the Diesel Generator Building?

(WITNESS KANE) At the Diesel Generator Building, A we understand that the south side is predominantly placed and they would be undetected by the settlement on earthquake loading. We understand the better portion of the north is the sands where we are estimating the amount of settlement under earthquake loading to be, if I am not mistaken, .25 inches plus or minus .15 inches.

Therefore, after an earthquake, we would expect the settlement to have increased that amount on the north side and very little effect on the south side, and that would be the differential settlement that would be occurring.

Q Would that total, whether it be .83 or .75, total amount of differential that is shown throughout the life of the plant, would that include the results of the

earthquake to which you have just testified to?

(WITNESS KANE) From my understanding from how A that was arrived at, no. Those settlements are estimated projecting the line which is being identified as a secondary compression line which is under static loading.

10577

We would have a settlement under earthquake loading of the magnitude that I have just spoken of.

It could be actually an improvement under earthquake loading, and the differential settlement that now exists could because we have had more settlement on the south side, that differential settlement could be improved. I am saying could because it depends very much on the transition between the sands and the clay and what happens.

It is my understanding that the settlements which we are anticipating, both on the static and dynamic load, have been properly estimated and how they are used in the structural analysis, I think is the question.

20 It is my understanding that these settlements that have been identified, have been used in the 22 structural analysis.

23 My next question goes to live loads, and perhaps 0 24 the dynamic loads, I was speaking about this morning.

Do you think that the addition of dynamic loads,

in particular, the beginning of operation of the building 2 of the diesel generators, will have a significant affect on settlement?

10578

(WITNESS KANE) I do not feel there would be a A significant affect, and it is my recollection that a detail of the technical specification will require monitoring before the diesel goes into operation while they are in operation, to evaluate that affect.

9 Q I asked Dr. Peck a number of questions along 10 the line of whether it would not have been more appropriate 11 to start back before anything was ever put on the ground 12 at all. And, would the slope and the eventual settlement 13 estimates prove to be the same when it is started way 14 back. Do you have any opinion on that?

> A (WITNESS KANE) Yes.

I would like to know what it is. 0

(WITNESS KANE) If your objective as far as A settlement is to understand its affects on the structure, then the time that you would be concerned with measurements of settlement would start when you place the structure on whatever soil you are placing it on. And so what settlement has occurred before then would not affect the structure.

24 It may be useful information to know its 25 settlement history, such as having been loaded by a glacier

M D D MASHINGTON, D.C. 20024 (202) 554-2345

300 7TH STREET, S.W., REPORTERS BUILDING,

and how do you preconsolidate it. That would be of
 interest but that is not going to affect the structure
 settlement -- from the time you place the structure there,
 that is what's going to have an impact on the structure.

5 Q Well could it affect the slope from which
6 estimates of future consolidation are formed or predicted?

A (WITNESS KANE) There is some indication and discussions on that, and I would like to refer to a figure in Mr. Weidner's testimony. I think this will all clear it up. 13-7,pj1

up.

I am referring to page 55. If we just take, say Bay 1 and point at the southwest corner, and we say for Line A, Line B, Line C and Line D measured settlements in inches. What we have here is the actual settlement history of the Diesel Generator Building beginning March of 1978 to 8-78, which I understand would be August.

So the structure -- we begin with March of 1978 because that was the day the reference markers were installed to the Diesel Generator Building. So this is in early time and construction. At the end of this period of 1978, At is my understanding the walls of the structure are up around elevation 656. Then we go through the next time frame which is Line B and we are measuring the settlement from 8-78 to the 40 surcharge, the full surcharge -the full surcharge was started which was January of 1979 and we have measured settlements for that time frame. Right now, we are not predicting any settlements. We are dealing with measured settlements for both Line A and Line B.

Then we get to Line C and we are talking about settlements from January of 1979 to 8-79 which is the day when the surcharge was removed. It is the surcharge period.

We have measured settlement values for that time frame. We go to the last period which is from the time the surcharge was removed to the end of the plant operation. And even within that period, we have utilized measured

20

21

22

23

24

25

settlements from 9-79 to 12-31-81. So even a portion of those settlements have been measured here.

The only time frame that we are predicting settlement for is from 12-31-81 to the year 12-2025. So the amount of settlement that we are making a small part of the settlement that we are dealing with with this structure.

Q Well, does it matter which of these early actual figures are used and which are not used in making a prediction? What I am trying to figure out is whether it makes a difference where you start in making a determination about the accuracy of your prediction in the future and whether it was appropriate as Dr. Peck did, to start about January 1979, I guess, or whether, as forming the foundation for his prediction, not for his prediction itself, by getting the data which analyze it.

Well, should it have gone back as it does here to March of 1978 or conceivably, should one have gone back earlier than that in order to make a fair prediction on the fugure?

A (WITNESS KANE) There are two parts to your question, and one is, if you are interested in what the settlements do to the structure, then the time to be concerned with the settlements is when you start to build the structure. We have settlement data from March of 1978.

13-7,pj3

22

23

24

25

It is my understanding the footings were poured in October of 1977 and the walls were started in, I think, December or January of 1978 -- excuse me, 1977 -- and by March of 1978, the walls were high enough because they were able to put on a marker that could measure settlements.

So for the periods of what settlement is doing to the structure, I think we have the information by having actually measured it. Now they go back -- that's what we are talking about what settlement does to the structure. Then we start talking about prediction of settlement.

The measured settlements were every bit as important as the predicted settlements because it is the total settlement history which is induced in the stresses on the structure.

The manner that Dr. Peck has used to predict settlement -- and that is establishing the settlement of the full surcharge load, is conservative, and that is why we are in agreement with the settlements that are being predicted for the time frame that we are really -- only have to be concerned with for our prediction, and that is-we made a deate, 12-31-81 and we said, beyond this time, we will use the prediction to estimate the settlements, and everything before that was measured.

300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

BY CHAIRMAN BECHHOEFER:

Q Well maybe one final question. Does it matter that the actual data used by Dr. Peck does not include the data from March of 1978 through January of 1979? As I understand it, he did not make -- did not rely on any earlier data at all. And in evaluating his particular estimates which include the data on which they are based, does it matter that he started in January of 1979 rather than, say March of 1978?

10583

A (WITNESS KANE) It does not matter from the standpoint of the prediction. It matters from the standpoint of -- they must have considered those settlements before to understand the stresses that have been imposed on the structure.

I think your question is, does it matter with respect to prediction, and my answer would be no.

Q Yes, that's correct.

That is all the questions the Board has.
Mr. Paton? You get some redirect if you want.
MR. PATON: I don't want any redirect.
I understand Mrs. Stamiris has a question.
ECROSS-EXAMINATION
BY MS. STAMIRIS:
Q Mr. Kane, do you have any idea of what

settlement may have taken place between October of 1977

and March of 1978 through any rough estimations?

A (WITNESS KANE) It is my understanding what was starting in October of 1977 were the footings and they were completed -- I am going on memory now -- they were completed by -- within a month's time and then the walls above that level were not started until late December. If that is true, then between October and December, I would not be concerned with any settlement.

10584

But now you begin to build the walls up and add rigidity to the structure. The amount of wall that is built there is not significant. There may be some settlement but in my opinion, we are beginning at a reasonable place with the best information that is available.

Q Are you aware of any information estimating settlement from October of 1977 to March of 1978, a permanent site benchmark of any kind?

A (WITNESS KANE) Unrelated to the Diesel Generator Building?

Q No, I am sorry. I mean at the Diesel Generator Building.

A (WITNESS KANE) I am not aware of any survey of settlement prior to March of 1978.

Q Mr. Kane, in your earlier analysis of the geotechnical aspects of the surcharging at the Diesel

13-8-3

Generator Building, did you base your analysis upon data received from the Applicant's other than the additional borings that were taken at the request of the NRC?

3

1

2

(WITNESS KANE) Yes. A

And so your analysis is -- the validity of Q your analysis is based on the validity of the data that was gathered --

MR. STEPTOE: Objection, Judge Bechhoefer. This is a question, against my better judgment, I allowed to be asked two weeks ago. But unless Mrs. Stamiris is prepared to lay a foundation for that kind of question, have a witness come forward indicating that there was something wrong with that data, then the question is improper. It simply asks the witness to state a truism. If the data he has given is wrong, then his conclusions may be wrong. It doesn't help the Board in any meaningful way.

MS. STAMIRIS: Well I would agree with Mr. Steptoe that that can be assumed as a given, that if the data was wrong, the conclusions would be wrong.

I would like to ask Mr. Kane whether he performed 22 or any of the members of the NRC performed any type of 23 spot checking as to some of the other witnesses have talked about here, of either the raw data or the calculations on that data.

BY MS. STAMIRIS:

2 Well, I want to ask it in a general way to 0 3 get an idea of how much of a check the NRC did on the 4 calculations that were performed. So I don't want to 5 specify certain calculations.

Would I be correct in understanding that the NRC did not reperform all the calculations submitted to them by the Applicant on this data?

> (WITNESS KANE) You would be correct. A

Can you make any estimate in a general sense Q of what percentage, if any, the NRC did recalculate themselves?

(WITNESS KANE) That is why I have to identify A the data with respect to what calculations did we do to check that the raw data is correct with respect to settlement. I'd have to have an understanding of what is the entire base that you want me to take a percentage of.

19 It's very small, you know. What we generally 20 do is in the critical time frames that we know are going to be analyzed, we will check that the settlements that have been given to us are proper for that time.

But with respect to the settlement data it is a very small percentage of the total readings.

Are you aware of examples where calculations

ALDERSON REPORTING COMPANY, INC.

300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

1 upon data were reperformed by the NRC and found wrong? 14-1-2 2 A (WITNESS KANE) By the NRC? 3 No, where the NRC did spot checks or rechecked 0 4 some calculations and found them to be wrong on the part 5 of the Applicant. 300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345 6 MR. STEPTOE: Excuse me. Is this confined to 7 the settlement data provided by the Applicant for the 8 Diesel Generator Building? 9 MS. STAMIRIS: Yes. Or, when I say settlement 10 data, I mean -- I do mean to include any data related 11 to the surcharge at the Diesel Generator Building. 12 WITNESS KANE: It's my recollection that when 13 we were trying to resolve the correct settlements to be 14 used in structural analysis there was a guestion of --15 if I'm not mistaken, the Applicant chose to begin 16 analyzing in 8-78, and we took the position that we had 17 settlement data from March of '78 and, therefore, that 18 settlement should be addressed in your settlement 19 analysis. 20 If you consider that an error, then your 21 statement is correct. But I know of no instance where 22 in our review we found data which was being improperly

23 and used by the Applicant.

24

25

BY MS. STAMIRIS:

Q Okay. I'd like to ask Mr. Kane whether you

1 4-1-3 2

3

4

18

19

20

21

22

23

24

25

4-2fol

300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345

believe that some of the data obtained in the additional borings requested by the NRC and the Army Corps of Engineers to assess the secondary consolidation of the surcharge are reached as a result of the surcharge. Do you? believe that any of this data did indicate that secondary consolidation was not achieved?

7 (WITNESS KANE) Yes. It's my recollection A 8 that in four of the borings, four of the six borings at 9 the Diesel Generator Building there were laboratory 10 consolidation test results where when a comparison is made of the preconsolidation pressure, which comes about from the laboratory consolidation test results, when that is compared to the design load, which would affect the dead load, live load and dewatering, when you make that comparison of pressures there were, in several borings, an indication that -- from the laboratory tests that the pressure was less, the preconsolidation pressure was less than the design level. And our interpretation of that was there were some layers within these borings where we may not have fully achieved primary consolidation.

1

2

3

4

5

6

7

8

9

10

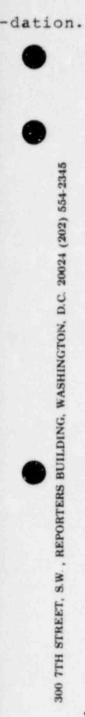

11

12

13

14

15

We asked the Applicant to estimate the settlement which remained because of that difference, which he did do, and it is my understanding the magnitude of settlements that remained was on the order of .2 inches to .4 inches between the four borings. And when we looked at that magnitude of settlement and compared it to what was being predicted by the extension of the secondary consolidation line that it was enveloped by that extension and we felt there was no problem, that we were satisfied.

Q Okay. Mr. Kane, do you believe that if the surcharge had been left in place longer than it was that the secondary consolidation in these borings that you just referred to would have been reached?

A (WITNESS KANE) If it were left longer, I believe it would have been reached, yes.

MS. STAMIRIS: Thank you. I don't have any other questions.

18 CHAIRMAN BECHHOEFER: Mr. Steptoe or Brunner? 19 MR. STEPTOE: Could we have just one moment? 20 (Discussion had off the 21 record.) 22 REDIRECT EXAMINATION 23 BY MR. BRUNNER: 24 Mr. Kane, even though you testified that in your 0 25 opinion there were some layers which were not in secondary

25

10591

88.

19

1	consolidation following removals of preload, I take it
2	from your testimony that in your opinion it did not affect
3	the validity of the Applicant's prediction of future
4	settlement?
5	A (WITNESS KANE) When you look at the Applicant's
,	prediction as being a conservative prediction, I would
	answer you yes.
	MR. BRUNNER: Thank you. I have nothing further.
	CHAIRMAN BECHHOEFER: I just have one further
)	question.
ij	EXAMINATION BY THE BOARD
2	BY CHAIRMAN BECHHOEFER:
3	Q Did you overhear the testimony this morning
	I guess I asked some questions and Mr. Paton asked some
	questions concerning the accuracy of the optical surveys
	or readings, and did you agree with Dr. Peck's responses
	to those questions?
	A (WITNESS KANE) It's my understanding that Dr.
	Feck has said under ordinary conditions you could expect
and a second second	an accuracy of survey of 1/16th of an inch. And then I
	am not sure what his position is with respect to 1/8th of
And and a state of the	an inch as to whether he feels that is appropriate for
100000	the Midland site.
-	If that is his indication, then I would say I
	The char is uns instruction, then I abuild say I

would differ based on what I know exists at Midland.

18

19

20

21

22

23

24

25

But I really feel that accuracy of the survey is dependent on the actual conditions that you're surveying.

10592

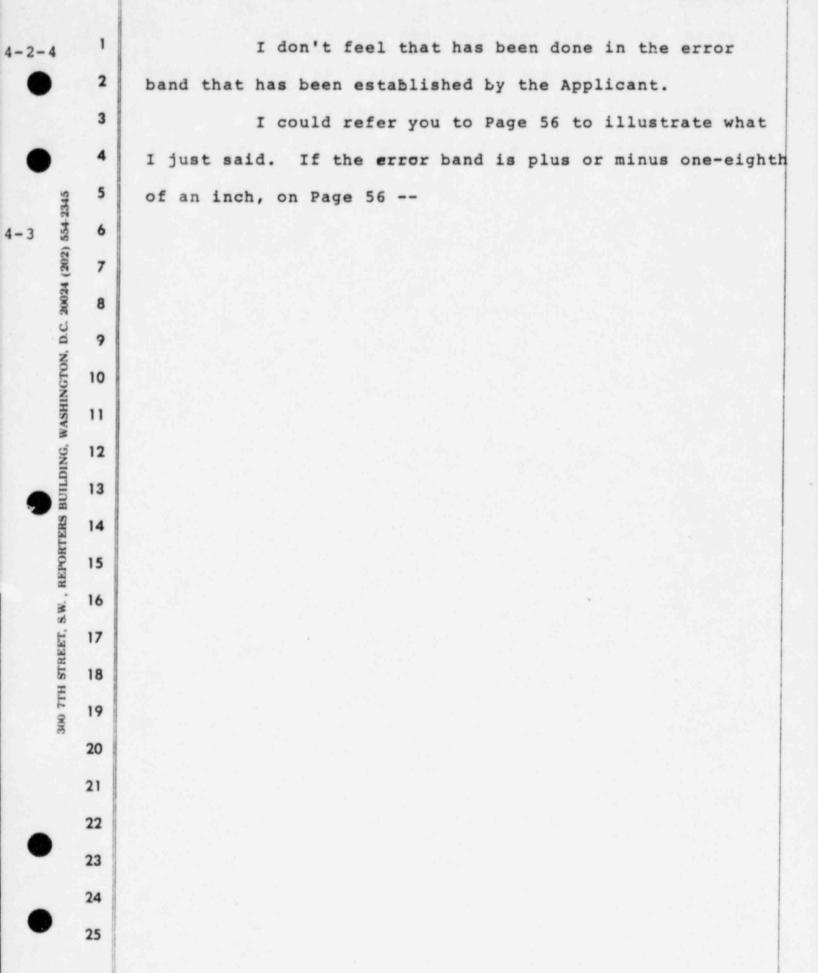

It has been my experience based on highway design and having this problem with respect to survey accuracy. I have talked to two surveyors trying to get an understanding of what accuracy would be reasonable for the conditions as I think they exist at Midland, and they have indicated to me a reasonable level of survey accuracy would be on the order of 1/16th of an inch.

Q Are you satisfied that the surveys taken are -- that the error bands which were testified to, one, are within the range the Staff would find acceptable or -yes, that's the question, within the range the Staff would find acceptable.

A (WITNESS MANE) The error band used by the Applicant, in my opinion, would be be acceptable, and I have not introduced the error band. It has been introduced by the Applicant.

In my opinion, the best information is what you have actually measured by surveying.

When you introduce error bands I think you have to do more than take -- more than take advantage of a favorable interpretation of that error band. I think if you are going to look at error bands you have to look at the worst and the best case of that error band.

	v u	~	-

4-3-1		10003
6	1	MR. STEPTOE: Excuse, me. This is Page 56 of
•	2	Mr. Weidner's testimony, is that correct?
	3	WITNESS KANE: That is correct.
•	4	BY WITNESS KANE:
45	5	AA (Continuing) The error band on Page 56 for the
554-2:	6	southwest corner, the line that is drawn by the Applicant
(202)	7	is plus one-eighth of an inch. Then if you go to the next
20024	8	bay, between Bay 1 and Bay 2, the straight line that is
WASHINGTON, D.C. 20024 (202) 554-2345	9	there is actually taking advantage of a minus one-eighth
NGTON	10	inch.
VASHL	11	In my estimation, the width of the error band
ING, V	12	and the way it's being used here is not appropriate.
BUILD	13	CHAIRMAN BECHHOEFER: Then I take it we're going
REPORTERS BUILDING,	14	to hear more about that subject later.
REPOR	15	MR. PATON: That's what the Applicant indicated
S.W.	16	they would intend to cross-examine Mr. Kane about, i
LEET,	17	believe.
300 7TH STREET,	18	MR. STEPTOE: That's correct. This is a
300 71	19	subject that I would like to reserve until later, in part
	20	because we'd like to see what the Staff's other witnesses
	21	are going to say with respect to the structural adequacy
	22	of the building. And my understanding is that they are
-	23	going to be filing some testimony tomorrow.
	24	MR. PATON: That's correct.
-	25	MR. STEPTOE: And I don't want to

14-3-2	1	CHAIRMAN BECHHOEFER: Okay. Well, I won't ask
	2	any further questions at this time on that subject.
	3	Is there anything further that anyone wishes to
•	4	ask this panel?
345	5	MS. STAMIRIS: I have one follow-up question
20024 (202) 554-2345	6	to the question Mr. Brunner asked.
1 (202)	7	RECROSS-EXAMINATION
	8	BY MS. STAMIRIS:
N. D.C.	9	Q Mr. Kane, I believe that Mr. Brunner asked you
WASHINGTON,	10	if the data that we spoke about that appeared in the
NASHI	11	additional borings which indicated to you that secondary
	12	consolidations had not been reached in all of the borings
BUILD	13	when he asked you whether it affected the validity of
REPORTERS BUILDING,	14	their prediction, the Applicant's prediction of future
REPOR	15	settlements, you answered by saying that the overall
S.W. , 1	16	conservative assumptions of settlement that the overall
	17	assumptions of settlement were conservative enough to
300 7TH SFREET,	18	envelope that and, therefore, it didn't indicate a
300 71	19	concern to you, but I want to ask you more precisely
	20	whether it did affect the validity of the predicted
	21	future settlement even if it is encompassed by what you
•	22	consider an adequate margin by their assuming that the
-	23	surcharge will be left in place?
	24	MR. BRUNNER: I object. I don't quite
-	25	understand that question.

14-3-3	1	MS. STAMIRIS: If Mr. Kane understood it,
•	2	maybe
-	3	MR. PATON: I understand it. Maybe Mr. Kane
-	4	understands it.
-		understands it.
-2345	5	MR. STEPTOE: Judge Bechhoefer, may we have a
2) 554	6	ruling on that?
4 (20)	7	CHAIRMAN BECHHOEFER: Well, I think Mr. Kane
2002	8	should state what question he's answering. If he
v, p.c	9	understands it, he should state what he understands it to
VGT01	10	be and then answer it.
ASHIP	11	BY WITNESS KANE:
NG, W	12	A If I do something to predict something in the
nital	13	future and realize the assumptions in that prediction,
ERS B	14	have conservatism in it and I'm now referring to the
REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345	15	fact that the predicted settlement is being based on the
S.W., Rł	16	full surcharge still being there, which is conservative,
	17	and if I'm thinking that conservatism can cover things that
STRE	18	I may not be perfectly right in and I come out to be
300 7TH STREET.	19	right, and then I don't think you have affected the
300	20	
		validity of that prediction.
	21	BY MS. STAMIRIS:
	22	Q Okay. And by that answer, then, you are basing
-	23	the overall validity of that prediction in part on the

10595

envelope of conservatism which goes along with it?

24

25

A (WITNESS KANE) Yes. I want to now defend the

1 Staff. If I knew it was conservative, why did I ask for 14-3-4 2 the borings and the laboratory testing? Until I got 3 that data I didn't know what part of that foundation soil 4 was less than secondary consolidation. I didn't know it's 5 thickness and I didn't know the degree or the magnitude 300 7TH STREET, S.W., REPORTERS BUILDING, WASHINGTON, D.C. 20024 (202) 554-2345 6 of the difference between the pressures. The laboratory 7 consolidation test permitted us to resolve that. 8 MS. STAMIRIS: Okay, I don't have any other 9 questions. 10 CHAIRMAN BECHHOEFER: Does anyone have any 11 further questions? 12 MR. BRUNNER: We have nothing further. 13 MR. PATON: Nothing further, Mr. Chairman. 14 CHAIRMAN BECHHOEFER: The panel may be excused. 15 WITNESS KANE: Thank you. 16 (Whereupon Witnesses Kane and 17 Hood were excused.) 18 MR. PATON: Mr. Chairman, could we talk about 19 schedules? It could be off the record as far as I'm 20 concerned. 21 CHAIRMAN BECHHOEFER: Yes. We'll adjourn until 22 tomorrow at 9:30. 23 (Whereupon, an adjournment was taken in the above-entitled 24 cause until Wednesday, December 8, 1982, at the hour 25 of 9:30 o'clock a.m.)
