

APPENDIX A

NOTICE OF VIOLATION

Entergy Operations, Inc.
Arkansas Nuclear One (ANO)

Docket Nos. 50-313/91-01
50-368/91-01
License Nos. DPR-51
NPF-6

During an NRC inspection conducted on January 8-10, 1991, violations of NRC requirements were identified. In accordance with the "General Statement of Policy and Procedure for NRC Enforcement Actions," 10 CFR Part 2, Appendix C (1990), the violations are listed below:

- A. 10 CFR Part 26, Appendix A, Subpart B, Section 2.4(g)(18) requires, in part, that for each screening test, two breath specimens be collected from each individual tested. Additionally, 10 CFR Part 26, Appendix A, Subpart A, Section 1.1(2) requires, in part, that licensees not deviate from the provisions of these guidelines without the written approval of the Commission.

Contrary to the above, the licensee failed to collect a second breath specimen for all sampling performed during 1990. Furthermore, the licensee failed to obtain written approval from the Commission to deviate from Appendix A, Subpart B, Section 2.4(g)(18), in that the licensee's procedures did not require a second breath test when results of the first breath specimen were 0.000.

This is a Severity Level V violation (Supplement VII).

- B. 10 CFR 26.22(c) requires, in part, that initial training must be completed prior to assignment of duties within the scope of 10 CFR Part 26. 10 CFR 26.23, requires, in part, that all contractor and vendor personnel performing activities within the scope of 10 CFR Part 26 be subject to the licensee's program if they are not in another approved fitness-for-duty program.

Contrary to the above, during 1990 the licensee failed to provide training to some contractor supervisors assigned duties that fell within the scope of this part.

This is a Severity Level IV violation (Supplement VII).

- C. 10 CFR Part 26, Appendix A, Subpart B, Section 2.4(c) requires, in part, that security procedures provide for the designated collection site to be secure, and Section 2.4(e) requires, in part, that no unauthorized personnel shall be permitted in any part of the designated collection site where specimens are collected or stored.

Contrary to the above, on January 9, 1991, the designated collection site was found not to be secured in that unauthorized individuals accessed the site. The licensee implemented effective corrective action before the NRC inspection ended.

This is a Severity Level IV violation (Supplement VII).

Pursuant to the provisions of 10 CFR 2.201, Entergy Operations, Inc., is hereby required to submit a written statement or explanation to the U.S. Nuclear Regulatory Commission, ATTN: Document Control Desk, Washington, D.C. 20555 with a copy to the Regional Administrator, Region IV, and if applicable, a copy to the NRC Resident Inspector, within 30 days of the date of the letter transmitting this Notice of Violation (Notice). This reply should be clearly marked as a "Reply to a Notice of Violation" and should include for each violation: (1) the reason for the violation, or, if contested, the basis for disputing the violation, (2) the corrective steps that have been taken and the results achieved, (3) the corrective steps that will be taken to avoid further violations, and (4) the date when full compliance will be achieved. If an adequate reply is not received within the time specified in this Notice, an order may be issued to show cause why the license should not be modified, suspended, or revoked, or why such other action as may be proper should not be taken. Where good cause is shown, consideration will be given to extending the response time. Under the authority of Section 182 of the Act, 42 U.S.C. 2232, this response shall be submitted under oath or affirmation.

Although Section 2.201 requires you to respond to this Notice, we note that Violation B had been corrected and those actions were reviewed during this inspection. Therefore, no response with respect to Violation B is required.
