

February 28, 1991

JOHN D. SIEBER  
Vice President - Nuclear Group

(412) 383-6255

U. S. Nuclear Regulatory Commission  
Attn: Document Control Desk  
Washington, DC 20555

Subject: Beaver Valley Power Station, Unit No. 1  
Docket No. 50-334, License No. DPR-66  
Proposed Operating License Change Request No. 185  
(TAC No. 79703)

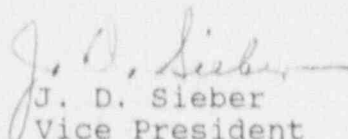

Enclosed are the following items:

1. An application for amendment to the operating license to modify Technical Specification Surveillance Requirement 4.7.1.5 for the main steam line isolation valves (MSIV's) to reflect the Standard Technical Specification requirements.
2. Documents designated Attachments A,B,C,D and E which set forth, respectively, the change in technical specifications, safety analysis and no significant hazard evaluation, typed replacement technical specification page, applicable UFSAR changes, and an information copy of the revised inservice test (IST) program cold shutdown justification for the MSIV's.

Approval of this amendment is requested by May 1, 1991, to allow the elimination of certain design change work scheduled for the 8th refueling outage.

This proposed change was reviewed by the Onsite Safety Committee and Offsite Review Committee and was determined to be safe and does not involve an unreviewed safety question.

Sincerely,

  
J. D. Sieber  
Vice President  
Nuclear Group
