SUBJECT: NRC INSPECTION REPORT 50-445/94-13; 50-446/94-13

This refers to the inspection conducted by D. N. Graves, K. M. Kennedy, and G. E. Werner of this office on May 1-28, 1994. The inspection included a review of activities authorized for your Comanche Peak Steam Electric Station, Units 1 and 2, facility. At the conclusion of the inspection, the findings were discussed with those members of your staff identified in the enclosed report.

Areas examined during the inspection are identified in the report. Within these areas, the inspection consisted of selective examinations of procedures and representative records, interviews with personnel, and observation of activities in progress. The results of this inspection are documented on pages 1 and 2, in the enclosed report.

It was identified that your staff failed to follow the actions delineated in Procedure SOP-609B regarding the removal and installation of undervoltage relay fuses and this was in violation of Technical Specification 6.8.1a regarding procedure implementation. This violation is not being cited because the criteria in paragraph VII.B.2 of Appendix C to 10 CFR Part 2 of the NRC's "Rules of Practice" were satisfied.

One unresolved item was identified concerning weld cracks discovered in the Unit 2 containment spray system. This matter is discussed in Section 7 of the enclosed inspection report.

In accordance with 10 CFR 2.790 of the NRC's "Rules of Practice," a copy of this letter and its enclosures will be placed in the NRC Public Document Room.
