Mr. Glenn Mooney
Senior Geologist
State of Wyoming
Department of Environmental Quality
Land Quality Division
1043 Coffeen Avenue, Suite D
Sheridan, WY 82801

Dear Mr. Mooney:

Enclosed are three copies of the report, "Reno Creek ISL Project, Attachment 10D, MP-9 Step-Drawdown Test and Multi-Well Aquifer Test," completed by Energy Fuels Nuclear, Inc. (EFNI) at the Reno Creek ISL Project. As discussed in EFNI's May 20, 1994 letter to you and in your response of June 1, 1994, the test was designed to provide site specific data in Mine Unit I to support the Land Quality Division's review of the proposed Mine Unit I monitor well ring. The report includes the pump test data tables as well as interpretive results.

Three copies are included for your distribution within the Land Quality Division, and two copies have been sent to Mr. Robert Carlson of the Nuclear Regulatory Commission. EFNI has taken the liberty of also sending a copy directly to Mr. Steve Ingle of Land Quality in Cheyenne. EFNI welcomes the opportunity to discuss the pump test results with Land Quality staff. Please call if we can answer any questions.

Very truly yours,

Terry V. Wetz

TVW/sju
