EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

| 0 | 2 | On January 9, 1983, at 7:10 p.m., the Unit One 'A' Containment Cooling Loop was

| 0 | 3 | taken out of service for preventative maintenance on the 1A Residual Heat Removal

| 0 | 4 | heat exchanger. The necessary surveillances were performed as per Technical

| 0 | 5 | Specification 3.5.B.3. Minor leakage from the Primary to the Secondary (RHR

| 0 | 6 | Service Water) side of the heat exchanger had been indicated by spikes in the

| 0 | 7 | service water activity. The operability of the 1A RHR heat exchanger was

| 0 | 8 | unaffected by this leakage, and no radioactive effluent limits were exceeded.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

| 1 | 0 | A new gasket for the inner head of the heat exchanger, and a new gasket for the

| 1 | 1 | drain line were installed to repair small leaks. The 'A' loop was returned to

| 1 | 2 | service at 1 p.m. on January 14, 1983. The loop was then proven operable. No

| 1 | 3 | further corrective action is deemed necessary.
