SUBJECT: NRC INSPECTION REPORT 50-382/94-11

This refers to the inspection conducted by Mr. E. J. Ford and other inspectors of this office on April 17 through May 28, 1994. The inspection included a review of activities authorized for your Waterford Steam Electric Station, Unit 3, facility. At the conclusion of the inspection, the findings were discussed with those members of your staff identified in the enclosed report.

Areas examined during the inspection are identified in the report. Within these areas, the inspection consisted of selective examinations of procedures and representative records, interviews with personnel, and observation of activities in progress. The results of this inspection are documented in the enclosed report.

A missed Technical Specification surveillance resulted in inoperable reactor protection system instrumentation, which was in violation of Technical Specification 3.3.1. This violation was of minor safety significance and your staff took prompt actions to correct the problem. Therefore, this violation is not being cited because the criteria in Paragraph VII.3.1 of Appendix C to 10 CFR Part 2 of the NRC's "Rules of Practice," were satisfied.

In accordance with 10 CFR 2.790 of the NRC's "Rules of Practice," a copy of this letter and its enclosure will be placed in the NRC Public Document Room.

Should you have any questions concerning this inspection, we will be pleased to discuss them with you.

Sincerely,

Beach
for A. Bill Beach, Director
Division of Reactor Projects
