Subject: Organizational Changes in Combustion Engineering's Quality Assurance Program

Reference: Letter, C. J. Heltemes, Jr. to A. E. Scherer dated November 16, 1977

Dear Mr. Haass:

The referenced letter provided NRC approval of Revision 3 of CENPD-210, "Quality Assurance Program - A Description of the C-E Nuclear Steam Supply System Quality Assurance Program". The letter also stipulated that organizational changes which do not affect the QA program are to be submitted no later than 30 days after announcement.

In compliance with this commitment, please be advised that a recent reorganization of Combustion Engineering's Power Systems Group has been announced. Updated organization charts will be formally submitted during the second quarter of 1983.

Principal among the changes to the organization is the deletion of the position of Power Systems Group Vice President of Operations. Vice Presidents who formerly reported to the Vice President of Operations now report directly to the Power Systems Group President. The internal procurement group now reports to the Vice President, Fossil Power Systems Division.

This reorganization does not eliminate any quality related activities, nor does it reduce the effectiveness of the Quality Assurance Program described in topical report CENPD-210-A, Revision 3. This change will be distributed to holders of C-E Power Systems Quality Assurance Manuals for Nuclear Steam Supply Systems during the second quarter of 1983.

If I can be of any additional assistance, please feel free to contact me or Mr. J. E. Rogers of my staff at (203) 688-1911, Extension 3028.

Very truly yours,

COMBUSTION ENGINEERING, INC.

A. E. Scherer
Director
Nuclear Licensing
