SUBJECT: NRC INSPECTION REPORT 030-30691/94-01

This refers to the routine, unannounced inspection conducted by Mr. Gilbert L. Guerra, Jr., of this office on August 9, 1994. The inspection included a review of activities authorized by Byproduct Material's License 35-26953-01. At the conclusion of the inspection, the findings were discussed with members of your staff.

The inspection was an examination of activities conducted under the license as they relate to radiation safety and to compliance with the Commission's rules and regulations and the conditions of the license. The inspection consisted of selective examinations of procedures and representative records, interviews of personnel, independent measurements, and observation of activities in progress.

No violations or deviations were identified; therefore, no response to this letter is required.

Through review of documents related to your radiation safety program and discussions held with Barnett Industrial X-Ray, Inc. staff, the inspector determined that licensee management had continued to provide adequate oversight to the radiation safety program. The inspector noted that field audits of radiographers and assistants had been conducted at appropriate intervals and that the regulations of 10 CFR Part 34 and conditions of the license had been met. This inspection did not include the observation of radiography in progress.

In accordance with 10 CFR 2.790 of the NRC's "Rules of Practice," a copy of this letter will be placed in the NRC Public Document Room.
