

JUN 17 1983

Docket Nos. 50-254/265

Mr. Dennis L. Farrar
Director of Nuclear Licensing
Commonwealth Edison Company
P. O. Box 767
Chicago, Illinois 60690

Dear Mr. Farrar:

SUBJECT: TMI ACTION PLAN ITEM II.K.3.13, HPCI/RCIC INITIATION LEVEL

Re: Quad Cities Nuclear Power Station, Units 1 and 2

By letter dated March 16, 1983, we provided you with our evaluation of the GE Owners Group conceptual design for TMI Action Plan Item II.K.3.13, HPCI/RCIC Initiation Level. Because we found the GE design to be an acceptable method for implementing this item, you were requested to conform to the approved design, or describe and justify any deviation.

By letter dated April 20, 1983, you stated that you had followed the approved design in implementing this item, except that your Technical Specifications do not specifically detail testing of each function associated with a reactor protection system. However, testing of the automatic RCIC restart capability is implied in Technical Specification 4.5.E.1, which requires that a logic system functional test shall be performed during each refueling outage. We therefore conclude that you have met the requirements of TMI Action Plan II.K.3.13 and this item is considered resolved.

Sincerely,

ORIGINAL SIGNED BY

Domenic B. Vassallo, Chief
Operating Reactors Branch #2
Division of Licensing
