Mr. Robert A. Clark, Chief
U. S. Nuclear Regulatory Commission
Office of Nuclear Reactor Regulation
Division of Licensing
Operating Reactors Branch No. 3
Washington, D.C. 20555

Reference: Docket No. 50-285

Dear Mr. Clark:

Technical Specification Changes and
Relief Requests for Fort Calhoun Station's
1983-1993 Inservice Inspection Program

Section 50.55a(g) of 10 CFR 50 requires licensees to apply to the Commission for amendment of their Technical Specifications to conform the Technical Specifications to their upcoming ten-year Inservice Inspection (ISI) program. For the Fort Calhoun Station (FCS), this application must be submitted six months prior to the September 26, 1983 start of the new ten-year cycle. An additional request was made by the Commission in its January 6, 1982 letter for the District to submit, on the same schedule, any requests for relief from Commission approved ASME XI code requirements (includes the latest edition and addenda up to September 26, 1982).

The District has determined there are no conflicts between FCS's Technical Specifications and the Commission approved ASME XI code requirements. The District is, however, considering minor Technical Specification changes which would clarify existing Technical Specifications in areas related to the ISI program. The amendment change application(s), if any, will be submitted to the Commission by July 30, 1983 and are not subject to schedule requirements of 10 CFR 50.55a(g).

The District has been unable to prepare the new ten-year ISI program. It is therefore impracticable, at this time, to submit relief requests on schedule as requested in the Commission's January 6, 1982 letter. The District will submit

Mr. Robert A. Clark
LIC-83-073

relief requests to the Commission by June 30, 1983, which is within the time frame specified by 10 CFR 50.55a(g).

Sincerely,

W. C. Jones
Division Manager
Production Operations
