PAPERWORK REDUCTION ACT
STATEMENTS REQUIRED FOR SPECIFIC SITUATIONS

This final rule amends information collection requirements that are subject to the Paperwork Reduction Act of 1980 (44 U.S.C. 3501 et seq.). These requirements were approved by the Office of Management and Budget, approval numbers 3150-0003, -0057, -0004, and -0058.

Because the rule will eliminate the need for certain paper forms, the public burden for this collection of information is expected to be reduced. The reduction in burden for the DOE/NRC Forms 741, 741A, 742, and 740M is estimated to average .25 hours per response. The reduction in burden for the DOE/NRC Form 742C is estimated to average 2 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding the estimated burden reduction or any other aspect of this collection of information, including suggestions for further reducing reporting burden, to the Information and Records Management Branch (MNBB-7714), U.S. Nuclear Regulatory Commission, Washington D.C. 20555-0001; and to the Desk Officer, Office of Information and Regulatory Affairs, NEOB-3019, (3150-0003, -0004, -00057, and -0058), Office of Management and Budget, Washington, D.C. 20503.

Licensee Submittal of Data in Computer Readable Form

AGENCY: Nuclear Regulatory Commission.

ACTION: Final ~~Rule~~.

SUMMARY: The Nuclear Regulatory Commission is amending its regulations to require certain licensees to submit data to the NRC in computer readable form. The rule streamlines the collection of nuclear material transaction data. Because a second keying of data will not be required it increases the accuracy of the reported information. In the long run the rule will save money for both NRC and licensees in the data collection effort.

EFFECTIVE DATE: Ninety (90) days after publication in the Federal Register.

FOR FURTHER INFORMATION CONTACT: Richard H. Gramann, U.S. Nuclear Regulatory Commission, Washington, DC 20555, Telephone (301) 504-2456.

SUPPLEMENTARY INFORMATION:

Background

The NRC has a major interest in the potential use for computer readable submittal. This innovation not only can result in monetary savings but it can also increase efficiency and accuracy of data collection efforts. In the past, the NRC has

0001 — am calling Gramann re this - its this - out

permitted the use of computer readable forms as well as the use of computer generated facsimiles of the printed forms. Many licensees now generate their own facsimiles. The latest revision of "Personal Computer Data Input for NRC Licensees" (Nuclear Materials Management and Safeguards System (NMMSS) Report D-24) ~~now~~ contains specific procedures for submitting in computer readable form DOE/NRC Form 741, "Nuclear Material Transaction Report," DOE/NRC Form 741A, "Nuclear Material Transaction Report (Continuation Page)," DOE/NRC Form 740M, "Concise Note," DOE/NRC Form 742, "Material Balance Report," and DOE/NRC Form 742C, "Physical Inventory Listing." The amendments make mandatory the reporting in computer readable form prescribed by that document. *Meaning* *// ??* These amendments eliminate the need for paper forms, thus providing a cost saving for the NRC in satisfying its statutory and treaty obligations.

The amendments affect each licensee who transfers, receives, or adjusts the inventory, in any manner, by 1 kilogram or more of uranium or thorium source material of foreign origin. Each specific licensee who transfers or receives 1 gram or more of contained uranium-235, uranium-233, or plutonium would also be affected. *//*

These amendments are intended only to take advantage of current computer technology and to make more efficient and less costly the data collection process. The Commission believes there will be minimal costs associated with the implementation of these amendments. Many licensees already have their material accounting automated and can generate computer readable reports. For those licensees who have not yet automated their reporting, a diskette with the appropriate formats and user prompts may be obtained from the NRC to facilitate this process. Licensees may

The amendments require licensees to submit computer readable reports for NRC in a format prescribed in NMSS Report D-24. They do not preclude other formats used for other purposes. Many licensees already generate facsimile reports for satisfying given requirements. Licensees who have no capability to produce these facsimiles may use the diskette provided by the NRC which can generate a facsimile (either hard copy or disk file for storage) of all forms subject to these amendments. With regard to records retention, the NRC permits the storage of records on electronic media with the capability for producing legible, accurate, and complete records during the required retention period. This would include computer generated facsimiles of forms subject to these amendments. For the reporting system to operate efficiently, computer readable submittal for NRC's use is necessary.

(2) Accepting Shipper's Values. A respondent suggested that the action code and date on the computer readable DOE/NRC Form 741 for a shipment be easily changed by the recipient to reflect accepting shipper's values.

The diskette that is available from the NRC includes a program for editing the file of a computer readable DOE/NRC Form 741 to edit the action code and date to reflect accepting shipper's values.

(3) Telecommunication of Licensee Submittal. Four respondents urged the transmission of the computer readable files over a modem instead of using diskettes.

There is no disagreement with the commenters that modem transmission is desirable. Transmitting files by modem to

satisfy reporting requirements is an immediate option of these amendments. The NRC will work with any licensee desiring this option.

(4) Revision of Guidance Documents. Several respondents noted the need to revise the guidance documents, NUREG/BR-0006, "Instructions for Completing Nuclear Material Transaction Reports and Concise Note Forms," NUREG/BR-0007, "Instructions for Completing Material Balance Report and Physical Inventory Listing," and NMMSS Report D-24, "Personal Computer Data Input for NRC Licensees," to be compatible with the submittal of computer readable forms.

NMMSS Report D-24 has been revised to include all the forms in these amendments. The other guidance documents will be revised as needed to reflect the use of computer readable forms to replace the paper forms.

Environment Impact: Categorical Exclusion

The NRC has determined that this proposed change is the type of action described in the categorical exclusion 10 CFR 51.33(c)(2). Therefore, neither an environmental impact statement nor an environmental assessment has been prepared for the proposed rule.

Paperwork Reduction Act Statement

This proposed rule amends information collection requirements that are subject to the Paperwork Reduction Act of 1980 (44 U.S.C. 3501 et seq.). This rule has been submitted to and approved by the Office of Management and Budget.

Because the rule would eliminate the need for certain paper forms, the public reporting burden for the collection of information is expected to be reduced. The resulting burden reduction for DOE/NRC Forms 741, 741A, 742, and 740M is estimated to average .25 hours per response. The resulting burden reduction for DOE/NRC Form 742C is estimated to average 2 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

Regulatory Analysis

These proposed amendments would have no significant impact on State and local governments and geographical regions. They would have a significant positive impact on the efficiency and accuracy of the data collection process. The proposed amendments would not have a significant impact on health, safety, and the environment. This rule would make all licensees submit computer readable reports regarding special nuclear material transactions. The NRC would realize a significant cost savings. Licensees have already demonstrated their computer expertise by generating near perfect copies of the current forms on Laser Jet printers. Generating computer readable data in accordance with a prescribed format offers less burden than producing these forms. The rule would facilitate the collection of data by the NRC to satisfy its statutory and treaty obligations. This constitutes the regulatory analysis for this proposed rule.

Would we continue to use proposed rule?

Agree that thought is incomplete

Regulatory Flexibility Certification

In accordance with the Regulatory Flexibility Act of 1980 (5 U.S.C. 605 (b)), the Commission certifies that this change will not, if promulgated, have a significant economic impact on a

substantial number of small entities. This ~~proposed~~ rule would affect all licensees required to report special nuclear material transactions using DOE/NRC Forms 741, 741A, 742, 742C, and 740M. The companies that own nuclear power plants or nuclear fuel fabrication plants have already automated their material accounting program and can easily generate computer readable reports. Other companies that have not yet automated their reporting may obtain a diskette from the NRC to assist them in satisfying their reporting requirements. These companies may fall within the scope of "small entities" set forth in the Regulatory Flexibility Act or the Small Business Size Standards set out in regulations issued by the Small Business Administration at 13 CFR Part 121.

Backfit Analysis

The NRC has determined that a backfit analysis is not required for this proposed change because these amendments do not involve any provisions that would impose backfits as defined in 10 CFR 50.109(a)(1).
