RE: **License #29-28426-01**
Routine Inspection #030-31286/001

Dear Mr. Pasciak:

I am responding to your correspondence concerning the routine inspection conducted on May 25, 1994 of our nuclear densometer. Please be understanding in how my letter reads as I am well intentioned but not familiar with the various citations you have made in your letter. We are a small company, without a large staff.

Violation A The facts as stated in your letter are true. The background is that this equipment has been inactive for several years. When used we had several employees who are Radiation Safety Officers and to be honest since we haven't been using it, we hadn't kept track of whether we still had someone under our employment who could serve as Radiation Safety Officer.

We are endeavoring to properly transfer the equipment to a location under a company better suited than we are. If you have any forms or regulations which will help us with this please let me know.

Violation B To the best of our knowledge, the equipment is kept in a locked closet at all times. As it hasn't been used in quite a while, occasionally it may be opened if even to verify that it is still there. In this instance I understand the closet was open so that movers could see other items which they would be responsible for moving in order to give us a price.

As part of our move Ed Rakucki did move the equipment to our new location.

Please be understanding as we are a small professional firm which has been struggling to survive in a horrible economic climate over the past several years.

Very truly yours,

Peter E. Meyer, P.E.
President
