CONFERENCE SUMMARY

Scope: An enforcement conference was held on September 28, 1994, at NRC Headquarters to discuss the apparent violations, their causes, and the perceived lack of management oversight at the facility as indicated by material accounting and control inspection 70-36/94-202. The corrective actions taken and planned by the licensee to rectify the deficiencies were also addressed at the conference.

Results: As a result of the enforcement conference, NRC management deemed the apparent violations as appropriate. In addition, a better understanding of the licensee's actions was obtained through these discussions which included valuable information and two important commitments. The commitments included the submission of additional details concerning the proposed improvement program and quarterly progress reports on program accomplishments.
