Reference Docket No. 99900509/83-01

This letter responds to your June 9, 1983 report of findings from your inspection conducted at our facility in Cherry Hill, New Jersey, on May 2-6, 1983. Our response to the Notice of Nonconformance included therein is as follows:

Summary of Nonconformance

Stone & Webster (Nine Mile Point 2 Project) Project Procedure 53, "Review, Approval, and Distribution of Project Design Criteria" states, in part, that superseded Design Criteria documents will be either destroyed or marked "Superseded". Contrary to that requirement, Revisions 2 and 3 of EDC5 "Criteria for Identification and Separation of Cable and Raceway Systems" were in existence on the Nine Mile Point 2 Project, and Revision 2 had not been marked "Superseded" as required by Project Procedure 53.

Extent

Review conducted to date indicates that a similar condition may exist on only one other Stone & Webster project. Review is continuing. Should review confirm that the condition exists, all corrective and preventive actions, including revising applicable procedures if necessary, will be completed by August 10, 1983.

Corrective Action

Corrective Action was completed by the Nine Mile Point 2 Project prior to the completion of the inspection. In summary:

Supplement (PPS-NMP2 53-16) to Project Procedure 53 was issued to all Project Manual holders. That supplement requires that:

- a. The status of all issued design criteria shall be maintained on the specification index. Holders of uncontrolled copies of design criteria documents shall check the index to verify current issue.

8308010344 830726
PDR GA999 EECSWE
99900509 PDR

- b. Document Control will distribute one controlled copy of each design criteria document to the originating group lead engineer.

Preventive Action

Nine Mile Point 2 Project Procedure 53 will be revised by August 10, 1983 in order to incorporate PPS-NMP2 53-16.
