Attention:

Mr. Cecil O. Thomas, Chief

Standardization Special Projects Branch

Gentlemen:

SUBJECT:

FORMAL TRANSMITTAL OF SLIDES FROM JUNE 10, 1983

GE PRESENTATION FOR INCLUSION INTO LICENSING TOPICAL

REPORT (LTR) NEDE-23785-1-P DOCKET

Reference:

Letter from J. F. Quirk (GE) to D. R. Miller (NRC), "General Electric Company Licensing Topical Report (LTR) NEDE-23785-1-P (The GESTR-LOCA and SAFER Model for the Evaluation of the Loss-of-Coolant Accident)", MFN-218-81,

December 30, 1981

Submitted for inclusion in the General Electric SAFER/GESTR-LOCA docket (referenced letter) are copies of all the slides from a June 10, 1983 GE presentation to the NRC Reactor Systems Branch. The slides have been separated into proprietary and non-proprietary categories as required by the NRC. These slides contain the details of some minor model refinements to SAFER and provide responses to NRC questions on the model application methodology.

Information contained in the attached slides marked "GE Company Proprietary" is of the type which General Electric maintains in confidence and withholds from public disclosure. It has been handled

1001

GENERAL & ELECTRIC

U.S. Nuclear Regulatory Commission Page 2

and classified as proprietary by General Electric as indicated in the attached affidavit and we hereby request that it be withheld from public disclosure in accordance with the provisions of 10CFR2.790.

Very truly yours,

J./ S. Quirk, Manager BWR Systems Licensing

Nuclear Safety & Licensing Operation

GENERAL ELECTRIC COMPANY

AFFIDAVIT

- I. Joseph F. Quirk, being duly sworn, depose and state as follows:
- I am Manager, BWR Systems Licensing, Nuclear Safety and Licensing Operation, General Electric Company, and have been delegated the function of reviewing the information described in paragraph 2 which is sought to be withheld and have been authorized to apply for its withholding.
- The information to be withheld is contained in several of the slides which were used in a GE presentation to the NRC on June 10, 1983 in Bethesda, MD. Each proprietary slide has been marked "General Electric Company Proprietary Information".
- 3. In designating material as proprietary, General Electric utilizes the definition of proprietary information and trade secrets set forth in the American Law Institute's Restatement Of Torts, Section 757. This definition provides:

"A trade secret may consist of any formula, pattern, device or compilation of information which is used in one's business and which gives him an opportunity to obtain an advantage over competitors who do not know or use it.... A substantial element of secrecy must exist, so that, except by the use of improper means, there would be difficulty in acquiring information.... Some factors to be considered in determining whether given information is one's trade secret are: (1) the extent to which the information is known outside of his business; (2) the extent to which it is known by employees and others involved in his business: (3) the extent of measures taken by him to guard the secrecy of the information; (4) the value of the information to him and to his competitors; (5) the amount of effort or money expended by him in developing the information; (6) the ease or difficulty with which the information could be properly acquired or duplicated by others."

- 4. Some examples of categories of information which fit into the definition of proprietary information are:
 - a. Information that discloses a process, method or apparatus where prevention of its use by General Electric's competitors without license from General Electric constitutes a competitive economic advantage over other companies;
 - Information consisting of supporting data and analyses, including test data, relative to a process, method or apparatus, the application of which provide a competitive economic advantage, e.g., by optimization or improved marketability;

- c. Information which if used by a competitor, would reduce his expenditure of resources or improve his competitive position in the design, manufacture, shipment, installation, assurance of quality or licensing of a similar product;

 d. Information which reveals cost or price information, production
 - d. Information which reveals cost or price information, production capacities, budget levels or commercial strategies of General Electric, its customers or suppliers;
 - e. Information which reveals aspects of past, present or future General Electric customer-funded development plans and programs of potential commercial value to General Electric;
 - f. Information which discloses patentable subject matter for which it may be desirable to obtain patent protection;
 - g. Information which General Electric must treat as proprietary according to agreements with other parties.
- In addition to proprietary treatment given to material meeting the 5. standards enumerated above, General Electric customarily maintains in confidence preliminary and draft material which has not been subject to complete proprietary, technical and editorial review. This practice is based on the fact that draft documents often do not appropriately reflect all aspects of a problem, may contain tentative conclusions and may contain errors that can be corrected during normal review and approval procedures. Also, until the final document is completed it may not be possible to make any definitive determination as to its proprietary nature. General Electric is not generally willing to release such a document to the general public in such a preliminary form. Such documents are, however, on occasion furnished to the NRC staff on a confidential basis because it is General Electric's belief that it is in the public interest for the staff to be promptly furnished with significant or potentially significant information. Furnishing the document on a confidential basis pending completion of General Electric's internal review permits early acquaintance of the staff with the information while protecting General Electric's potential proprietary position and permitting General Electric to insure the public documents are technically accurate and correct.
- 6. Initial approval of proprietary treatment of a document is made by the Subsection Manager of the originating component, the man most likely to be acquainted with the value and sensitivity of the information in relation to industry knowledge. Access to such documents within the Company is limited on a "need to know" basis and such documents at all times are clearly identified as proprietary.
- 7. The procedure for approval of external release of such a document is reviewed by the Section Manager, Project Manager, Principal Scientist or other equivalent authority, by the Section Manager of the cognizant Marketing function (or his delegate) and by the Legal Operation for technical content, competitive effect and determination of the accuracy of the proprietary designation in accordance with the

standards enumerated above. Disclosures outside General Electric are generally limited to regulatory bodies, customers and potential customers and their agents, suppliers and licensees only in accordance with appropriate regulatory provisions or proprietary agreements.

- 8. The document mentioned in paragraph 2 above has been evaluated in accordance with the above criteria and procedures and has been found to contain information which is proprietary and which is customarily held in confidence by General Electric.
- 9. These slides contain information which addresses several NRC questions on the application of GE's improved evaluation model (SAFER/GESTR) and describes some model logic corrections and improvements. All the information in the package entitled, "SAFER Modifications", is directly related to calculational methors within the SAFER code and therefore is proprietary due to the reasons stated in Section 4a of this affidavit. All the slides in the package entitled, "Questions on SAFER Application Methodology", are proprietary (under Sections 4a and 4b).

STATE OF CALIFORNIA) ss:

Joseph F. Quirk, being duly sworn, deposes and says:

That he has read the foregoing affidavit and the matters stated therein are true and correct to the best of his knowledge, information, and belief.

Executed at San Jose, California, this Z day of July, 1983.

Joseph F. Quirk
