Mr. Robert E. Denton
Vice President - Nuclear Energy
Baltimore Gas and Electric Company
Calvert Cliffs Nuclear Power Plant
1650 Calvert Cliffs Parkway
Lusby, MD 20657 - 4702

SUBJECT: NOTICE OF VIOLATION
COMBINED INSPECTION REPORT NOS. 50-317/94-25 AND 50-318/94-25

Dear Mr. Denton:

This letter transmits the report of the announced inspection conducted by Messrs. L. Cheung and A. Finkel of this office from October 17-28 and from December 13-14, 1994, at the Calvert Cliffs Nuclear Power Plant, Units 1 and 2, in Lusby, Maryland. The inspection included a review of activities authorized for your Calvert Cliffs facility. The inspectors discussed the results of the inspection with Mr. R. Heibel on October 28, 1994, and Mr. A. Thornton on December 14, 1994.

This inspection focused on engineering activities important to the public health and safety, with particular emphasis on the adequacy of your provisions for the design, procurement, and installation of a safety-related emergency diesel generator and a station blackout diesel generator, and support systems, at Calvert Cliffs Nuclear Power Plant.

Details on the areas examined during the inspection are described in the enclosed report. Within these areas, the inspection consisted of selected examinations of procedures and representative records, interviews with personnel, and observations by the inspector.

The inspectors determined that the diesel generator system designs were consistent with your commitments, and that you had established an effective program to control the startup problem report issues.

We also reviewed your corrective actions for three previously-identified items. Your corrective actions for these items were adequate and the items are closed.

Based upon the results of this inspection, one of your activities appeared to be in violation of NRC requirements, as discussed in the enclosed Notice of Violation (Notice). The violation is of concern because safety-related equipment was not properly protected against the construction environment, resulting in potential degradation of the safety-related equipment. You are required to respond to this letter and you should follow the instructions of the enclosed Notice when preparing your response. In your response, you

should document the specific actions taken and any additional actions you plan to prevent recurrence. After reviewing your response to this Notice, including your proposed corrective actions and the results of future inspections, the NRC will determine whether further NRC enforcement action is necessary to ensure compliance with NRC regulatory requirements.

The responses directed by this letter and the enclosed Notice are not subject to the clearance procedures of the Office of Management and Budget as required by the Paper Work Reduction Act of 1980, Pub. L No. 96.511.

Your cooperation with us in this matter is appreciated. If you have any questions, please call me at (610) 337-5376.

Sincerely,

William H. Ruland, Chief
Electrical Section
Division of Reactor Safety
