## NOTICE

### Availability of Reference Materials Cited in NRC Publications

Most documents cited in NRC publications will be available from one of the following sources:

1. The NRC Public Document Room, 1717 H Street, N.W.  
Washington, DC 20555
2. The NRC/GPO Sales Program, U.S. Nuclear Regulatory Commission,  
Washington, DC 20555
3. The National Technical Information Service, Springfield, VA 22161

Although the listing that follows represents the majority of documents cited in NRC publications, it is not intended to be exhaustive.

Referenced documents available for inspection and copying for a fee from the NRC Public Document Room include NRC correspondence and internal NRC memoranda; NRC Office of Inspection and Enforcement bulletins, circulars, information notices, inspection and investigation notices; Licensee Event Reports; vendor reports and correspondence; Commission papers; and applicant and licensee documents and correspondence.

The following documents in the NUREG series are available for purchase from the NRC/GPO Sales Program: formal NRC staff and contractor reports, NRC-sponsored conference proceedings, and NRC booklets and brochures. Also available are Regulatory Guides, NRC regulations in the *Code of Federal Regulations*, and *Nuclear Regulatory Commission Issuances*.

Documents available from the National Technical Information Service include NUREG series reports and technical reports prepared by other federal agencies and reports prepared by the Atomic Energy Commission, forerunner agency to the Nuclear Regulatory Commission.

Documents available from public and special technical libraries include all open literature items, such as books, journal and periodical articles, and transactions. *Federal Register* notices, federal and state legislation, and congressional reports can usually be obtained from these libraries.

Documents such as theses, dissertations, foreign reports and translations, and non-NRC conference proceedings are available for purchase from the organization sponsoring the publication cited.

Single copies of NRC draft reports are available free upon written request to the Division of Technical Information and Document Control, U.S. Nuclear Regulatory Commission, Washington, DC 20555.

Copies of industry codes and standards used in a substantive manner in the NRC regulatory process are maintained at the NRC Library, 7920 Norfolk Avenue, Bethesda, Maryland, and are available there for reference use by the public. Codes and standards are usually copyrighted and may be purchased from the originating organization or, if they are American National Standards, from the American National Standards Institute, 1430 Broadway, New York, NY 10018.

## Introduction

Volume II of the GPU v. B&W lawsuit review contains four appendices supporting the review of the GPU v. B&W lawsuit discussed in Volume I of this report.

As outlined in the Background section of Volume I under (3) "Review Method Utilized by the Staff," the GPU v. B&W lawsuit review was partitioned into 10 categories. These categories are as follows:

- 1 Operator Training
- 2 Procedures
- 3 Operating Experience
- 4 Licensee Qualification
- 5 Quality Assurance and Maintenance
- 6 Equipment and System Design and Function
- 7 Accident Analysis
- 8 Radiation Protection
- 9 Emergency Planning
- 10 Management Competence/Integrity

The 154 certification items and the 19 long-term actions (hearing items or restart issues) resulting from Commission Orders and the hearing process were each placed in one or more of the 10 categories. There were no certification issues for Category 10 for the reasons given in the Background section of Volume I under (3) "Review Method Utilized by the Staff." The partitioning of certification issues according to category is shown in Appendix A, which consists of nine sections, A1 through A9, and Tables 1 and 2.

Appendix B consists of 10 sections, B1 through B10. Each section contains a computer listing of lawsuit documents that were determined to require further technical review in that category during the initial screening process. Each section of Appendix B is further divided into three headings as follows: trial testimony, depositions, and exhibits. Figure 1 contains a typical listing for each of these headings and provides an explanation of how to read the computer listing entries.

The trial testimony listing is in alphabetical order according to the surname of each witness. Where witnesses testified more than 1 day, each day's testimony is listed chronologically under the name of the witness. The testimony page numbers are in succession; that is, the trial transcript starts on page 1 and continues until page 7,424. There were 37 witnesses during the trial and the total number of trial testimony documents is 83.

The pretrial deposition listing also is in alphabetical order according to the surname of the deponent. Where individuals were deposed for more than 1 day, each day's deposition is listed chronologically under the deponent's name. Each individual's deposition begins with page 1 and continues for as many pages as it took to complete the deposition. Eighty-one individuals were deposed and the total number of deposition documents is 252.

The exhibit listing contains deposition and trial exhibits. The listing is by order of the exhibit number with all B&W exhibits appearing first, followed by the GPU exhibits. The exhibit appears under "Other document identification," see Item 14 of Figure 1. The numbering of the exhibits is as follows:

- (1) B&W deposition exhibits  
1-1024 series (754 documents, some numbers not used)
- (2) B&W trial exhibits or exhibits identified for use in trial but not used  
4000 series (81 documents) - B&W trial documents and visual aids  
5000 series (36 documents) - B&W tapes and transcripts of tapes
- (3) GPU deposition exhibits  
1-1021 (624 documents, some numbers not used)
- (4) GPU trial exhibits or exhibits identified for use in trial but not used  
2000 series (420 documents) - GPU trial documents  
3000 series (101 documents) - GPU visual aids  
6000 series (84 documents) - GPU tapes and transcripts of tapes

The trial exhibits consist of 2,100 numbered exhibits. In the majority of cases when a pretrial deposition exhibit was identified for use in the trial it retained its pretrial exhibit number.

Appendix C identifies the review categories (1 through 10) in which lawsuit documents were initially screened for further technical review. Not all documents were screened into one of the categories; a total of 720 documents were declared to be not applicable to this review effort. On the basis of the subject matter discussed in these 720 lawsuit documents, they were judged by the project managers during the screening process as not relevant to the review effort; therefore, no technical review was required. These documents are indicated by an "NA," which appears in the comment section of Appendix C. A computer printout listing of these documents appears in Appendix D.

Fifty-three other exhibits, which were either used in the trial or earmarked for possible use in the trial, were not obtained or screened by the NRC during this review process because they were either visual aids, models, or tape recordings. These documents are identified as such in the comment section of Appendix C. An additional 23 exhibits also were not reproduced or screened by the NRC during this review effort since these documents were already a matter of public record or were previously docketed material (e.g., the TMI-2 Final Safety Analysis Report). These documents are identified by the notation "Do not duplicate list" in the comment section of Appendix C. Four exhibits (GPU 2162, 2164, 2170, and 2180) could not be located by GPU and thus were not considered in this review.

NUREG-0680 IR-82-17 IR-83-01 IR-83-02 IR-83-06	Licensee installing safety grade system per long-term requirement. Installed modification unsatisfactory, replacement modification pending (8/83). Estimate review completion 8/83 (NRR).	No (Reg. I) 9/83
6	EFW Procedures	Provide procedures and training to assure that EFW is available and properly applied when required. Procedures will identify the need to verify proper operation when EFW is initiated.	NUREG-0680	Complete	Yes
7	EFW Alignment	To assure that EFW will be aligned in a timely manner to inject on all EFW demand events when in surveillance test mode, procedures will be implemented and training conducted to provide an operator at the necessary location in communications with the control room during the surveillance mode to carry out alignment changes necessary upon EFW demand events.	NUREG-0680 IR-81-21	Complete	Yes
8	EFW Auto-Start Annunciation	Design review and modifications, as necessary, will be conducted to provide control room annunciation for all auto start conditions of the EFW system.	NUREG-0680 IR-81-28 IR-82-01	Complete	Yes
<u>Reliability Analysis</u>					
9	CST Level Alarm	Provide redundant level indication and control room alarms for the primary EFW system water supply.	NUREG-0680 IR-82-01 IR-82-19 IR-82-26	Complete	Yes
