

Welcome

Ray Furstenau

Director, Office of Nuclear Regulatory Research

5th Annual NRC PFHA Research Workshop

NRC HQ, Rockville, MD

February 19-21, 2020

PFHA Research Objective

- NRC's Risk-Informed Regulatory Policy has been translated into practice in some external hazard areas (e.g., seismic, high winds)
- Flood hazard assessment is a significant gap
 - Deterministic approaches do not quantify uncertainties
- PFHA research is aimed at filling this gap
 - Quantify uncertainties
 - Support risk-informed decisionmaking

Addressing Current and Future Needs

- Recent experience has highlighted importance of risk-informing flood hazard assessments
 - Flooding events at or near NPPs in U.S. and abroad
 - Flooding OpE session in this year's workshop
 - Post-Fukushima flood hazard reevaluations and integrated assessments
- Ongoing and new risk-informed initiatives
 - FLEX, Risk-informed categorization and treatment of SSCs, Risk-informing inspections and other licensing and oversight activities
- Readiness for licensing new and advanced reactor designs

Progress

- Phased Approach
 - Technical basis
 - Pilot Studies
 - Guidance
- Bulk of technical basis research completed
 - Climate
 - Precipitation
 - Riverine flooding
 - Storm surge
 - Reliability of flood protection and mitigation
 - Modeling frameworks

Current PFHA Research Focus

- In FY20 NRC/RES turned focus towards PFHA Pilot Studies
 - Fine-tune scenario-specific issues
 - Demonstrate development of hazard curves for multiple flooding mechanism and spectrum of impacts
 - Inform development of guidance
- 3 PFHA Pilots
 - Site-scale Flooding (Local Intense Precipitation)
 - Riverine Flooding
 - Coastal Flooding
- Discussion with User Offices on scope and format of guidance
 - PFHA workshops provide valued input from a broad cross-section of partners and stakeholders
