Docket No. 50-336

MAR 7 1984

Northeast Nuclear Energy Company
 ATTN: Mr. W. G. Council
 Senior Vice President
 Nuclear Engineering and Operations
 Post Office Box 270
 Hartford, Connecticut 01641-0270

Gentlemen:

We have received a copy of your application dated October 12, 1983, which was filed with the Office of Nuclear Reactor Regulation (ONRR) for review. This application proposed certain Technical Specification changes relating to modification of the pressurizer level band for the Millstone Nuclear Station Unit No. 2. Fees pursuant to 170.22 were not remitted with your application since you determined that the application could be treated in conjunction with the review required for the Cycle 6 reload dated April 13, 1983.

Applications can be supplemented or superseded without additional fees being paid as long as the supplemental data or superseding application does not add new items to what was previously requested. It is our understanding that the changes proposed in your October 12 application are new changes rather than supplemental data on the Cycle 6 reload application which was approved by Amendment No. 90 on December 30, 1983. Based on information provided by the ONRR staff as the result of their preliminary review of your application, it has been determined that a Class III fee (\$4,000) is appropriate for it since the review will involve consideration of a single safety issue. Therefore, you are requested to remit the sum of \$4,000 to this office. If the ONRR staff's final review of your application reveals that this fee is not appropriate, you will be notified and any necessary adjustments will be made.

Sincerely,

Original Signed by:
