Gentlemen:

**VOGTLE ELECTRIC GENERATING PLANT
PROPOSED AMENDMENT TO TECHNICAL SPECIFICATIONS
FOR ACCIDENT MONITORING INSTRUMENTATION**

By letter dated March 18, 1994, Georgia Power Company (GPC) proposed an amendment to the Vogtle Electric Generating Plant (VEGP) Unit 1 and Unit 2 Technical Specifications related to the accident monitoring instrumentation. By letter dated February 28, 1995, GPC responded to a request for additional information (RFAI) from the NRC staff regarding the subject proposed amendment. During the development of our response to the RFAI, GPC discovered that four of the instrument channels listed in TS table 3.3-8 for steam generator water level narrow range should not be designated as accident monitoring instrumentation pursuant to Regulatory Guide 1.97, Revision 2. These instrument channels are indicated by loop numbers 551, 552, 553, and 554 in VEGP TS table 3.3-8. Therefore, these loop numbers should be deleted from table 3.3-8. The remaining loop numbers for steam generator water level narrow range are correct. The attached changes will also be included in the next periodic update of the FSAR and other documents, as appropriate.

Attached is a revised mark-up of the affected page of table 3.3-8 for your use in processing the proposed amendment. This additional change does not affect the conclusions of our original March 18, 1994, evaluation pursuant to 10 CFR 50.92.

Sincerely,

C. K. McCoy
