Re: St. Lucie Units 1 and 2  
Docket Nos. 50-335 and 50-389  
Annual Radiological Environmental  
Operating Report for Calendar Year 2019

The enclosed report is being submitted pursuant to Technical Specification 6.9.1.8. The Annual Radiological Environmental Operating Report provides information summaries and analytical results of the Radiological Environmental Monitoring Program (REMP) for calendar year 2019.

Please contact me at 772-467-7435 with any questions regarding this submittal.

Sincerely,

A handwritten signature in black ink, appearing to read "Wyatt Godes".

## **1. Introduction**

This report is submitted pursuant to Specification 6.9.1.8 of St. Lucie Unit 1 and St. Lucie Unit 2 Technical Specifications. The Annual Radiological Environmental Operating Report provides information, summaries, and analytical results pertaining to the radiological environmental monitoring program for the calendar year indicated. This report covers surveillance activities meeting the requirements of Unit 1 and Unit 2 Technical Specifications.

## **2. Radiological Environmental Monitoring Program**

### **A. Purpose**

The purpose of the radiological environmental monitoring program is to provide representative measurements of radiation and of radioactive materials in those exposure pathways and for those radionuclides which lead to the highest potential radiation exposures to members of the public resulting from station operation. The radiological environmental monitoring program also supplements the radiological effluent monitoring program by verifying that the measurable concentrations of radioactive materials and levels of radiation are not higher than expected on the basis of the effluent measurements and the modeling of the environmental exposure pathways.

### **B. Program Description**

The radiological environmental monitoring program (REMP) for the St. Lucie Plant (PSL) is conducted pursuant to the St. Lucie Units 1 and 2 Offsite Dose Calculation Manual (ODCM) Section 3/4.12.1, Monitoring Program.

#### **1. Sample Locations, Types and Frequencies:**

- a. Direct radiation gamma exposure rate is monitored continuously at 27 locations by thermoluminescent dosimeters (TLDs). TLDs are collected and analyzed quarterly.
- b. Airborne radioiodine and particulate samplers are operated continuously at five locations. Samples are collected and analyzed weekly. Analyses include Iodine-131, gross beta, and gamma isotopic measurements.
- c. Surface water samples are collected from two locations. Samples are collected and analyzed weekly and monthly, respectively. Analyses include gamma isotopic and tritium measurements.
- d. Shoreline sediment samples are collected from two locations coinciding with the locations for surface water samples. Samples are collected and analyzed semi-annually. Sediment samples are analyzed by gamma isotopic measurements.

- e. Fish and invertebrate samples are collected from two locations. Samples are collected and analyzed semi-annually. Fish and invertebrate samples are analyzed by gamma isotopic measurements.
- f. Broad leaf vegetation samples are collected from three locations. Samples are collected and analyzed monthly. Broad leaf vegetation samples are analyzed by gamma isotopic measurements.

## 2. Analytical Responsibility

Radiological environmental monitoring for the St. Lucie Plant is conducted by the State of Florida, Department of Health (DOH), Bureau of Radiation Control (BRC). Samples are collected and analyzed by DOH personnel.

Samples are analyzed at the DOH BRC Environmental Radiation Control Laboratory in Orlando, Florida.

## C. Analytical Results

Environmental Radiological Monitoring Program Annual Summary provides a summary for all specified samples collected during the referenced surveillance period. Deviations from the sample schedule or missing data, if any, are noted and explained in the Deviations/Missing Data section. Samples not meeting the specified "A PRIORI" LLD, if any, are noted and explained in Analyses with LLDs Above Required Detection Capabilities. Analysis data for all specified samples analyzed during the surveillance period is provided in Section 4.

## D. Land Use Census

A Land Use Census Survey out to a distance of a five-mile radius from the St. Lucie Plant is conducted annually to determine the location of the nearest milk animal, residence, and garden producing broad leaf vegetation, in each of the 16 meteorological sectors. A summary of the Land Use Census for the surveillance year is provided in Section 4.

## E. Interlaboratory Comparison Program

The interlaboratory comparison program consists of participating in the DOE Mixed Analyte Performance Evaluation Program (MAPEP) and the Environmental Resources Associates (ERA) proficiency Testing, consisting of the MRaD and RadChem study.

The samples are analyzed using the methods applicable to the REMP (Gamma Spectroscopy, Gross Beta, and Tritium for Water).

The results for nuclides associated with the REMP are listed in Section 10.

### **3. Discussion and Interpretation of Results**

#### **A. Reporting of Results**

The Annual Radiological Environmental Operating Report contains the summaries, interpretations and information required by St. Lucie Plant ODCM. The following tables provide a summary of the measurements made for the nuclides required by ODCM, Table 4.12-1, for all samples specified by Table 3.12-1. In addition, summaries are provided for other nuclides identified in the specified samples, including those not related to station operation. These include nuclides such as K-40, Th-232, Ra-226, and Be-7, which are common in the Florida environment

#### **B. Interpretation of Results**

##### **1. Direct Radiation:**

The results of direct radiation monitoring are consistent with past measurements for the specified locations. The exposure rate data shows no indication of any adverse trends attributed to effluents from the plant. The measured exposure rates are consistent with exposure rates that were observed during the pre-operational surveillance program.

##### **2. Air Particulates/Radioiodine**

For results attributed to plant effluents: The results for radioactive air particulate and radioiodine monitoring are consistent with past measurements and indicate no trends attributed to plant effluents. All samples for radioiodine yielded no detectable I-131. Gamma isotopic measurements yielded no indication of any nuclides attributed to station operation. The results for air particulate/radioiodine samples are consistent with measurements that were made during the pre-operational surveillance program.

##### **3. Waterborne, Surface Water:**

The results for radioactivity measurements in surface water are consistent with past measurements and with measurements made during the pre-operational surveillance program. Tritium was reported as present in 3 of the 52 ODCM required samples for the indicator location and none of the 12 samples of the control location surface water samples collected. The highest value was 7.0% of the required lower limit of detection and 0.7% of the reporting level listed in ODCM Table 3.12-2. There were no indications of any other nuclides that could be attributed to plant effluents.

##### **4. Waterborne, Sediment and Food Products:**

The results for radioactivity measurements in waterborne sediment, fish, and crustacean samples are consistent with past measurements and with

measurements made during the pre-operational surveillance program. For the Fish Ingestion Pathway, Cs-137 was not reported for the two samples at the indicator location as well as the 2 samples at the control location. There were no indications of any other nuclides that could be attributed to plant effluents.

#### 5. Broad Leaf Vegetation

The results for radioactivity measurements in broad leaf vegetation are consistent with past measurements and with measurements made during the pre-operational surveillance program. Cs-137 was reported in 0 of the 24 ODCM required samples and was not present in any of the 12 Control locations. There were no indications of any other nuclides that could be attributed to plant effluents.

#### 6. Land Use Census:

There were no changes identified in the Land Use Census as compared to last year's report.

No locations yielding a calculated dose or dose commitment greater than the values currently being calculated were identified by the Land Use Census.

No locations yielding a calculated dose or dose commitment (via the same exposure pathway) 20 percent greater than locations currently being sampled in the radiological environmental monitoring program were identified by the Land Use Census.

#### 7. Interlaboratory Comparison Program:

The State of Florida laboratory participated in MAPEP Series 41, and the ERA RadCheM-117. These satisfied the requirements as directed in the PSL Offsite Dose Calculation Manual (ODCM) for the Interlaboratory Comparison Program.

### C. Conclusions:

The data obtained through the St. Lucie Plant Radiological Environmental Monitoring Program verifies that the levels of radiation and concentrations of radioactive materials in environmental samples, representing the highest potential exposure pathways to members of the public, are not being increased. Measured exposure rates are consistent with exposure rates that were observed during the pre-operational surveillance program.

- Results for air particulate/radioiodine samples are consistent with measurements that were made during the pre-operational surveillance program.
- The highest value for tritium in surface water was 7.0% of the required lower limit of detection and 0.7% of the reporting level listed in ODCM Table 3.12-1. There were no indications of any other nuclides that could be attributed to plant effluents.
- There were no indications of any nuclides that could be attributed to plant effluents in the broad leaf vegetation samples.
- There were no indications of any nuclides in the waterborne, sediment, or food products that could be attributed to plant effluents.

The measurements verify that the dose or dose commitment to members of the public, due to operation of St. Lucie Units 1 and 2, during the surveillance year, are well within "as low as reasonably achievable" (ALARA) criteria established by 10 CFR 50, Appendix I.

#### 4. Environmental Radiological Monitoring Program Annual Summary

Be-7, K-40, Pb-210, Pb-212, & Ra-226 are naturally occurring.

Number of Non-Routine Reported Measurements=0

## NOTES

- a. The LLD is an "a priori" lower limit of detection which establishes the smallest concentration of radioactive material in a sample that will yield a net count above system background that will be detected with 95% probability with only 5% probability of falsely concluding that a blank observation represents a real signal.

LLDs in this column are at time of measurement. The MDAs reported in the Quarterly reports for the individual samples have been corrected to the time of sample collection.

- b. Mean and range based upon detectable measurements only. Fraction of detectable measurements at specified locations is indicated in parentheses (f).
- c. Specific identifying information for each sample location is provided in Attachment A.
- d. Results were based upon the average net response of three elements in a TLD (thermoluminescent dosimeter).

MDA refers to minimum detectable activity.

## VI. Land Use Census

The St. Lucie Annual Land Use Census Survey was performed during the month of June 2019. There was one change identified as compared to the 2018 St. Lucie Annual Land Use Census Survey. No locations were identified of potential milk-producing animals (cows or goats).

### Distance to Nearest (a, b)

Sector	Residence	Garden (d)	Milk Animal (c)
N	O (e)	O	O
NNE	O	O	O
NE	O	O	O
ENE	O	O	O
E	O	O	O
ESE	O	O	O
SE	1.5/142 1.6/145	O	O
SSE	1.8/147 (g) 2.0/149	L (f)	L
S	3.3/190	L	L
SSW	2.2/212	4.4/207	L
SW	1.9/234	L	L
WSW	1.9/240	2.0/250	L
W	1.9/260	L	L
WNW	2.3/281	L	L
NW	3.4/304	L	L
NNW	2.7/344	L	L

## NOTES

a. All categories surveyed out to a 5-mile radius from the St. Lucie Plant.

b. The following format is used to denote the location:

distance (miles) / bearing (degrees)

For example, a residence located in the southeast sector at a distance of 1.5 miles bearing 142 degrees is recorded as 1.5/142.

c. Potential milk animal locations.

d. Only gardens with an estimated total area of 500 square feet, or more, and producing green leafy vegetables are considered.

e. "O" denotes that the sector area is predominantly an ocean area.

f. "L" denotes that the sector area is predominantly a land area unoccupied by the category type.

g. Non-residential occupied buildings in these sectors include the following:

<u>Sector</u>	<u>Distance</u>	<u>Description</u>
SSE	1.8/147	Fire Station

## **5. Deviations / Missing Data**

There were several instances of missing data and air sampler partial run times as follows:

A. Pathway: Airborne, Particulates, and Radioiodines

Location: H30, 2miles West  
Dates: 08/27/19-09/05/19  
Deviation: Failure to perform continuous monitoring  
Description of Problem: The pump failed during the sampling week. Estimated run time for the week was 208.78 hours out of 218.40 (10 hours down time).  
Corrective Action: Replaced the pump.

B. Ingestion, Fish and Invertebrates, Crustacea

Location: H15 <1mi, ENE/E/SSE  
Dates: Second Semi-Annual Sample  
Deviation: Failure to perform environmental surveillance due to seasonal unavailability.  
Description of Problem: A crustacean was unavailable and not collected in the second half of 2019. Staff personnel were not able to locate and collect Crustacea during the period.  
Corrective Action: Crustacea was collected in June 2019. Completed a communication to more closely coordinate resources between BRC and FPL utility personnel to ensure timely collection of Crustacea samples.

C. Ingestion, Fish and Invertebrates, Crustacea

Location: H59 10-20mi, S/SSE  
Dates: Second Semi-Annual Sample

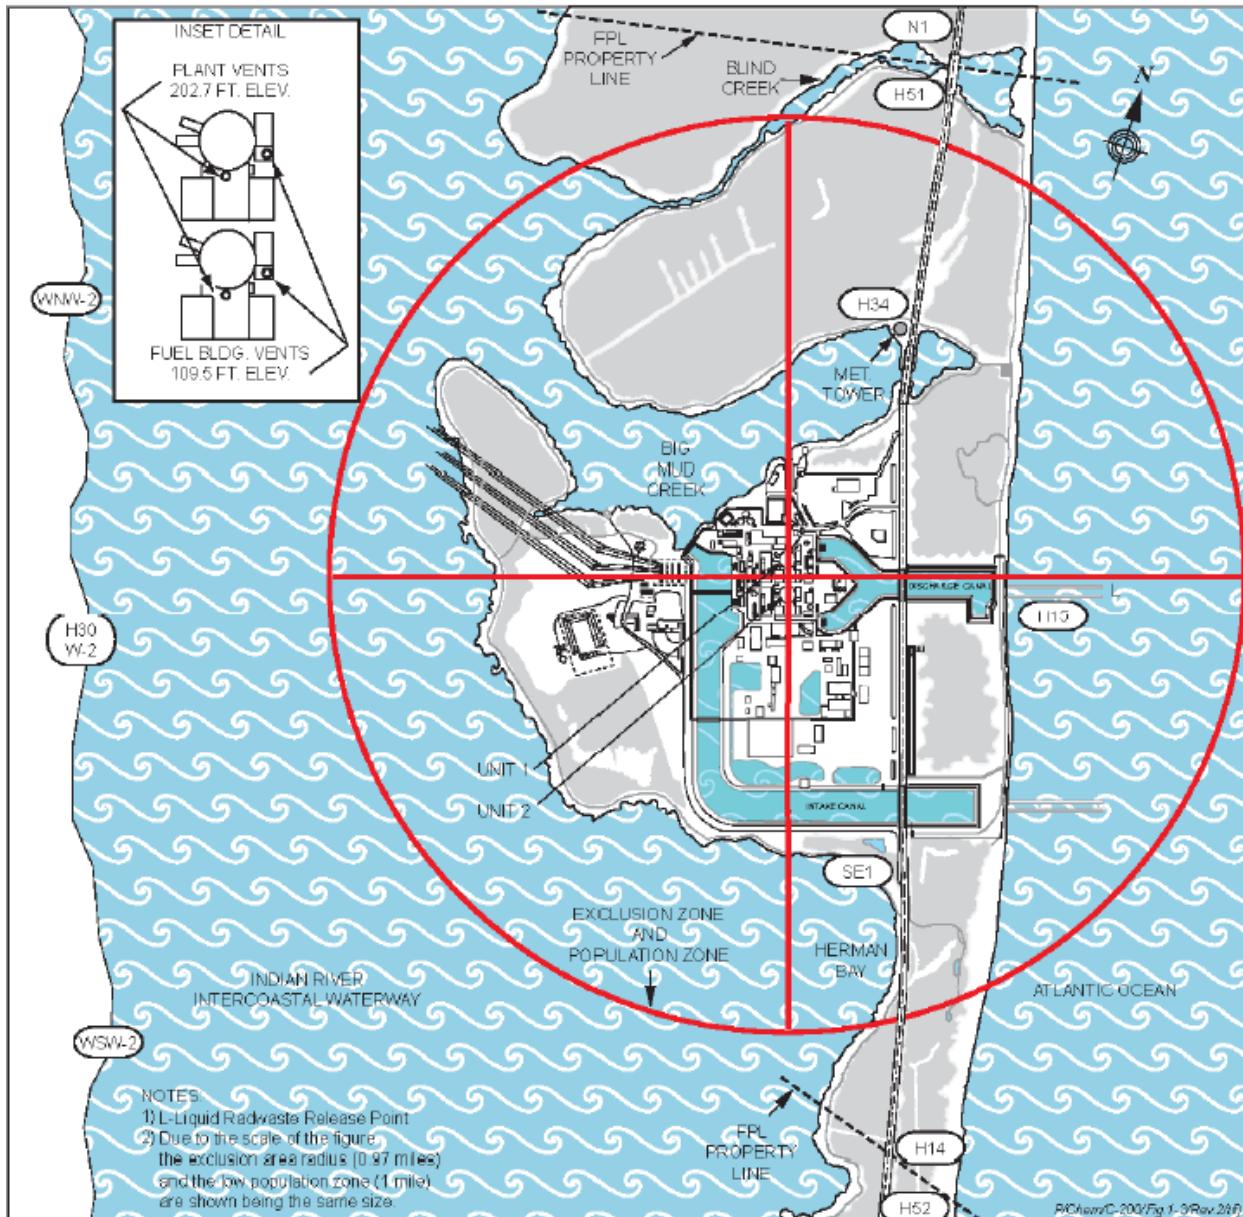

Deviation:	Failure to perform environmental surveillance due to seasonal unavailability.
Description of Problem:	A crustacean was unavailable and not collected in the second half of 2019. Staff personnel were not able to locate and collect Crustacea during the period.
Corrective Action:	Crustacea was collected in June 2019. Completed a communication to more closely coordinate resources between BRC and FPL utility personnel to ensure timely collection of Crustacea samples

## **6. Analyses with LLDs Above Required Detection Capabilities**

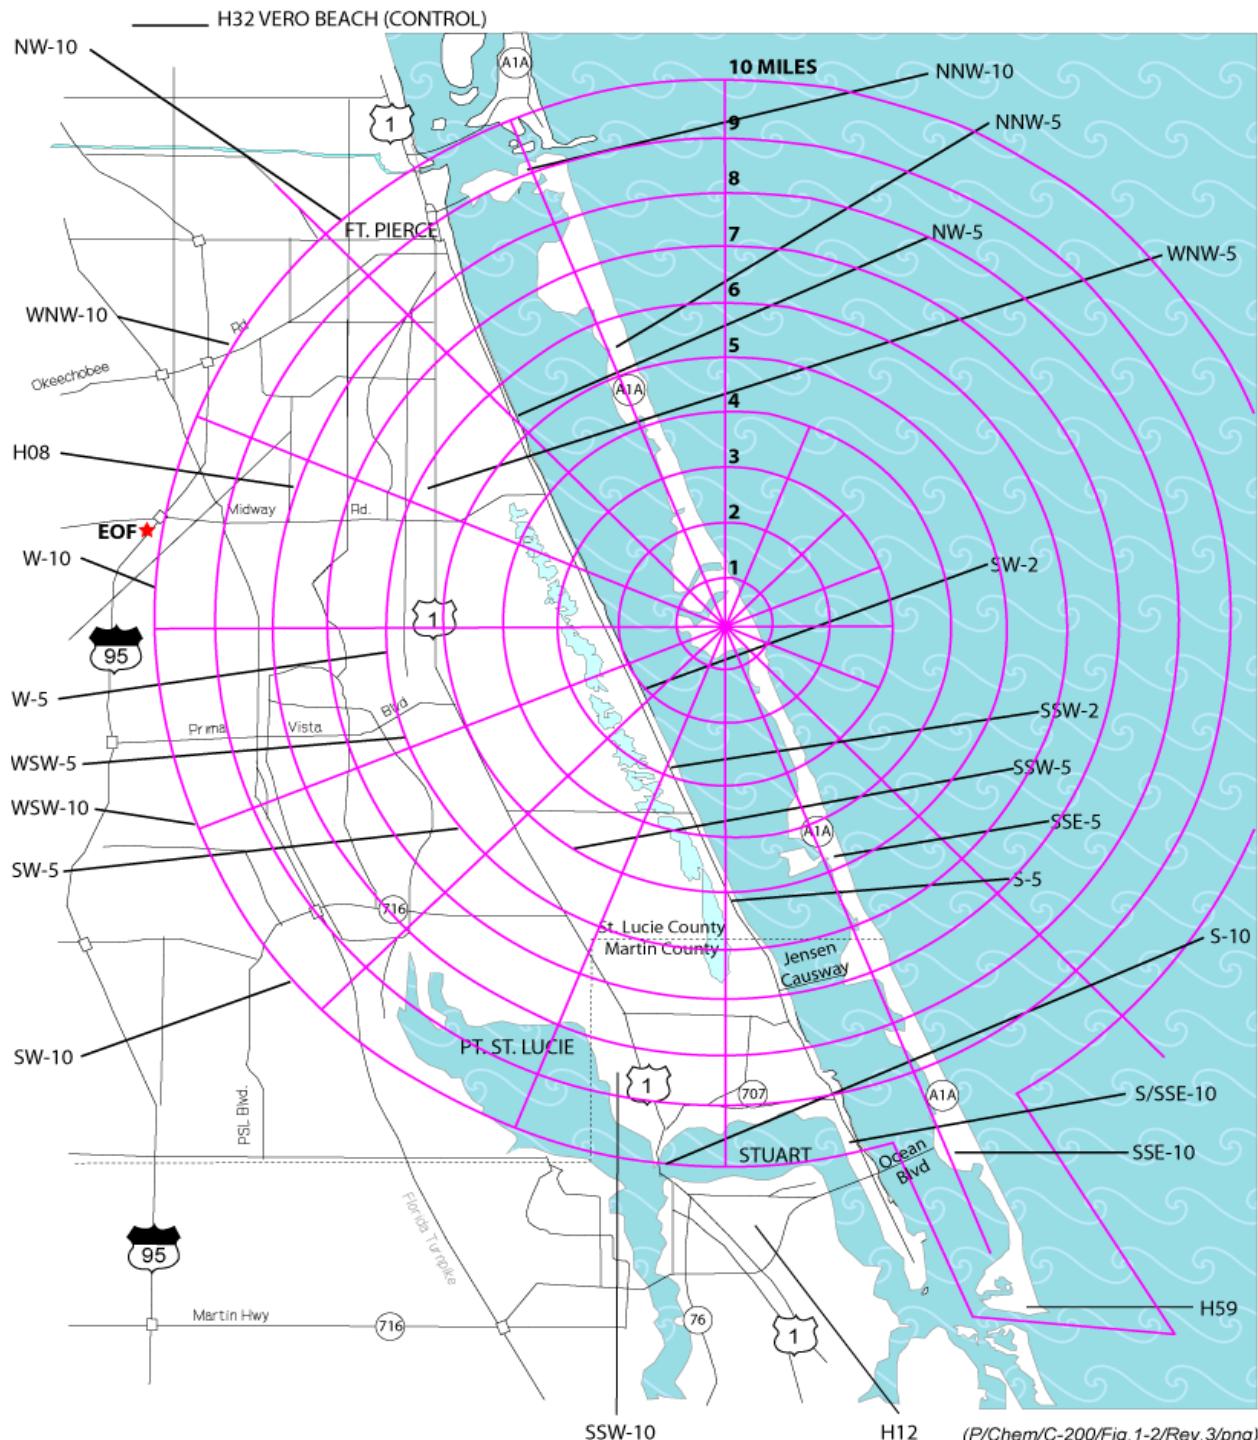

The values specified in the ODCM 4.12-1 Detection Capabilities, were achieved for all samples.

## **7. Key to Sample Locations**

Site Area Map & Environmental Sample Locations

## **8. Ground Water Protection, Industry Initiative:**

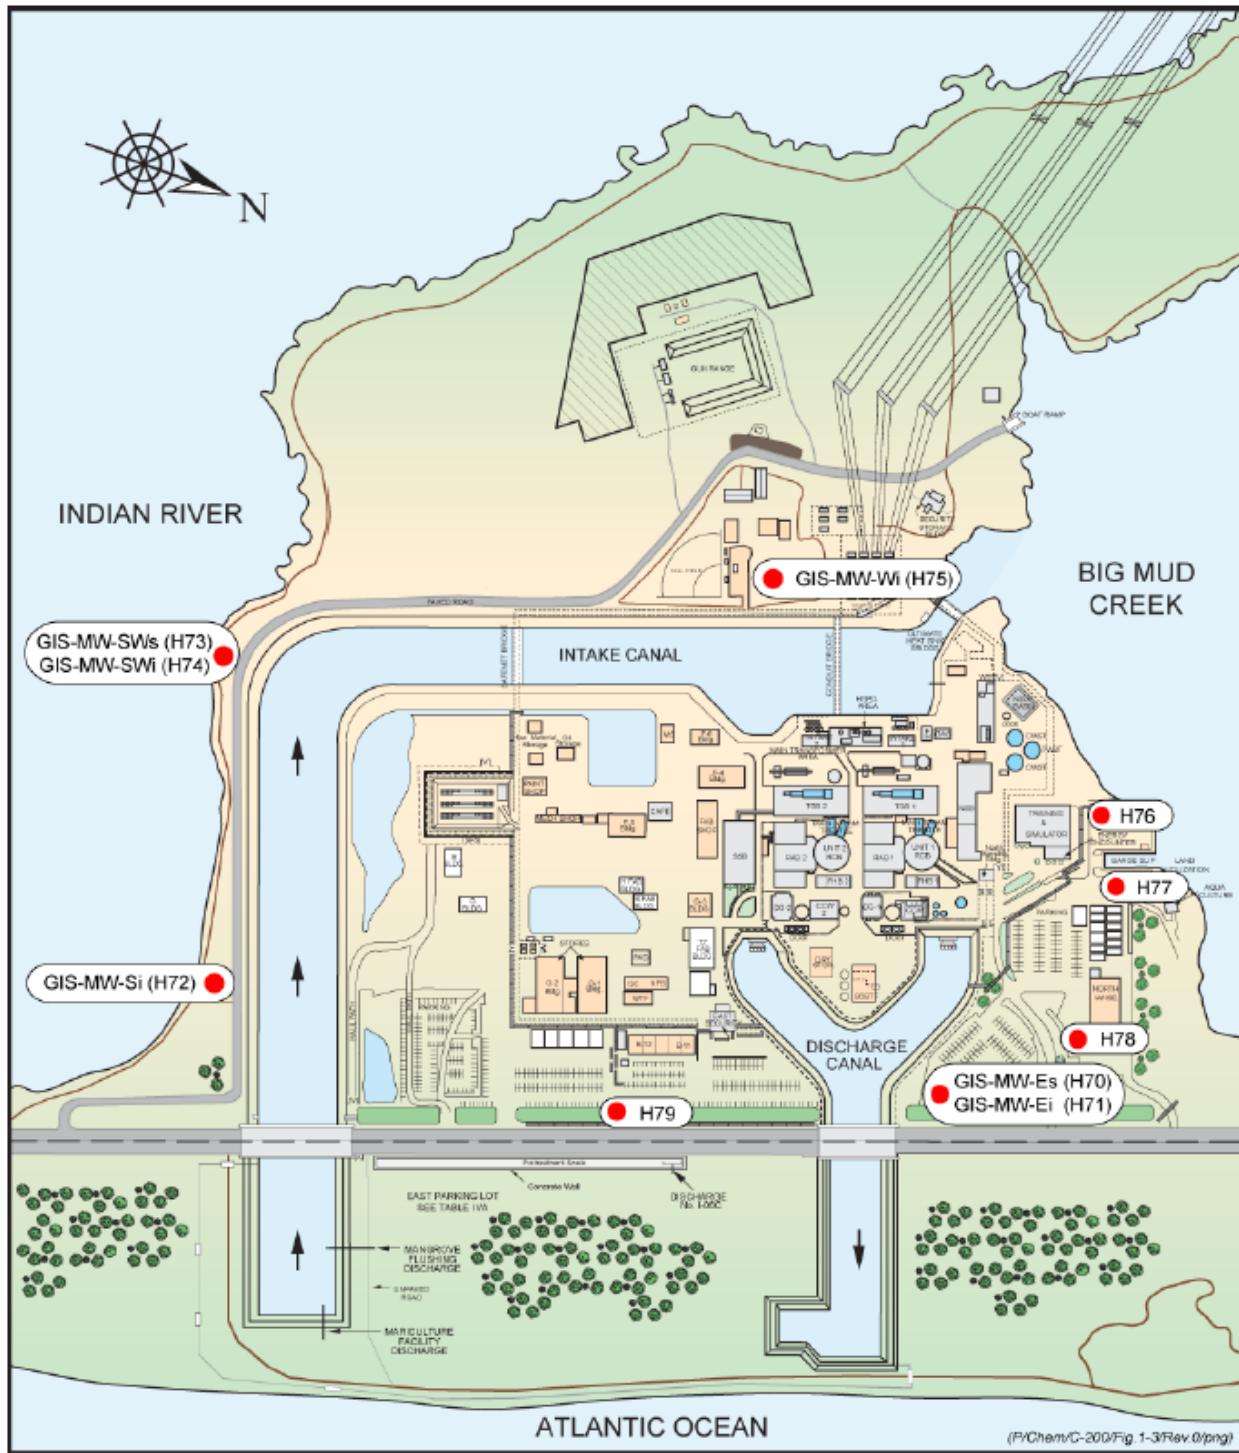

### **A. Description of Program:**

Quarterly sampling & analysis for Tritium & principle gamma emitters is performed by the State of Florida Department of Health (DOH) and Bureau of Radiation Control (BRC), pursuant to an Agreement between FPL and DOH, as part of the ODCM REMP sampling program.

The wells identified for radiological environmental sampling in support of the industry initiative are listed below, and in Appendix B-2 of the ODCM. The ten wells are on the 'outside' perimeter of the protected area. Two locations where the Plant ID ends with "S" are shallower wells adjacent, within a few feet, of a deeper well at the same location.

Samples analyzed for H3 and principle gamma emitters; tritium is the only fission product identified. Naturally occurring K-40 is occasionally identified.

State ID	St. Lucie Plant ID	Location Description
H70	GIS-MW-ES	West of A1A; between the discharge canal and Gate "B"
H71	GIS-MW-EI	West of A1A; between the discharge canal and Gate "B"
H72	GIS-MW-SI	South of Intake canal and the adjacent access road
H73	GIS-MW-SWS	S/W corner of Intake canal and the adjacent access road
H74	GIS-MW-SWI	S/W corner of Intake canal and the adjacent access road
H75	GIS-MW-WI	West of plant site and intake canal; South of switchyard
H76	H76	North of Simulator; South of Big Mud Creek
H77	H77	East of Barge Slip; By LU bldg
H78	H78	South of North Warehouse
H79	H79	West of A1A and East of Parking Lot

4.a.2. Fish	Semiannually	2	1
4.b. Broadleaf Vegetation	Monthly	3	9
			Total: 212

NOTE: Measurement results having magnitudes that are significantly above the background of the measurement system are reported as net values plus or minus a one-standard-deviation error term. Measurement results that are not significantly above background are reported as less than a Lower Limit of Detection (<LLD), which is an estimated upper limit (with at least 95% confidence) for the true activity in the sample.

The marine fauna listed in this report were collected in part, under Florida FWC SAL030.

4.a.1. Crustacea	Semiannually	2	2
4.a.2. Fish	Semiannually	2	1
4.b. Broadleaf Vegetation	Monthly	3	9

Total: 212

NOTE: Measurement results having magnitudes that are significantly above the background of the measurement system are reported as net values plus or minus a one-standard-deviation error term. Measurement results that are not significantly above background are reported as less than a Lower Limit of Detection (<LLD), which is an estimated upper limit (with at least 95% confidence) for the true activity in the sample.

The marine fauna listed in this report were collected in part, under Florida FWC SAL030.

1. DIRECT RADIATION - DUAL DEPLOYED TLD's - ( $\mu\text{R}/\text{hour}$ )

## ST. LUCIE SITE

## Supplemental Sampling

Second Quarter, 2019

Sample Type	Collection Frequency	Number of Sample Locations	Number of Samples
1. Direct Radiation	Quarterly	9	18
2. Airborne			
2.a. Air Iodines	Weekly	3	39
2.b. Air Particulates	Weekly	3	39
3. Waterborne			
3.a. Surface Water	Monthly	2	6
3.b. Shoreline Sediment	Semiannually	4	0
3.c. Beach Sand	Semiannually	3	0
3.d. Ground Water	Quarterly	10	10
4. Ingestion			
4.a. Garden Crop	Annually	1	0
4.b. Citrus	Annually	1	0

Total: 112

NOTE: Measurement results having magnitudes that are significantly above the background of the measurement system are reported as net values plus or minus a one-standard-deviation error term. Measurement results that are not significantly above background are reported as less than a Lower Limit of Detection (<LLD), which is an estimated upper limit (with at least 95% confidence) for the true activity in the sample.

1. DIRECT RADIATION - DUAL DEPLOYED TLD's - ( $\mu\text{R}/\text{hour}$ )

Sample Site	Deployment Collection	21-Mar-19 17-Jun-19
	Old	New
H08	$3.35 \pm 0.12$	$3.96 \pm 0.37$
H09	$3.38 \pm 0.07$	$3.96 \pm 0.24$
H12	$7.10 \pm 0.34$	$7.91 \pm 0.51$
H14	$3.47 \pm 0.14$	$3.90 \pm 0.38$
H33	$3.35 \pm 0.30$	$3.68 \pm 0.15$
H34	$3.05 \pm 0.12$	$3.51 \pm 0.33$
H60	$3.24 \pm 0.15$	$3.53 \pm 0.37$
H61	$4.04 \pm 0.19$	$4.72 \pm 0.44$
H62	$3.36 \pm 0.48$	$4.02 \pm 0.30$

2.a. IODINE-131 IN WEEKLY AIR CARTRIDGES - (pCi/m<sup>3</sup>)

Collection Date	H09	H32	H33
01-Apr-19	<0.02	<0.03	<0.03
09-Apr-19	<0.02	<0.02	<0.02
16-Apr-19	<0.03	<0.02	<0.03

Average:	0.015 ± 0.001	0.014 ± 0.001	0.013 ± 0.001

(A) No power. Estimated run time 130 out of 144 hours.

2.b. AIR PARTICULATES - GAMMA ANALYSIS OF QUARTERLY COMPOSITES - (pCi/m<sup>3</sup>)

Sample Site	Be-7	K-40	Cs-134	Cs-137	Pb-210
H09	0.1630 ± 0.0115	<0.0260	<0.0014	<0.0010	<0.0411
H32	0.1420 ± 0.0097	<0.0246	<0.0010	<0.0008	<0.0310
H33	0.1460 ± 0.0095	<0.0143	<0.0012	<0.0011	<0.0144

3.a. SURFACE WATER - (pCi/L)

<u>Sample Site</u>	<u>Collection Date</u>	<u>H-3</u>	<u>K-40</u>	<u>Mn-54</u>	<u>Co-58</u>	<u>Fe-59</u>	<u>Co-60</u>	<u>Zn-65</u>	<u>Zr-95 Nb-95 (A)</u>	<u>I-131</u>	<u>Cs-134</u>	<u>Cs-137</u>	<u>Ba-140 La-140 (B)</u>
H13	09-Apr-19	<140	307 ± 24	<3	<4	<7	<4	<7	<5	<4	<3	<4	<7
	08-May-19	<134	392 ± 46	<6	<6	<11	<6	<10	<9	<6	<5	<6	<12
	13-Jun-19	<135	295 ± 24	<3	<3	<7	<4	<8	<6	<6	<3	<4	<5
H36	09-Apr-19	<140	402 ± 28	<3	<3	<7	<4	<7	<6	<4	<3	<3	<7
	08-May-19	394 ± 49	332 ± 45	<6	<7	<11	<7	<10	<9	<7	<5	<6	<13
	13-Jun-19	<135	326 ± 44	<6	<6	<13	<6	<16	<10	<9	<5	<7	<12

(A) - These tabulated LLD values for Zr/Nb-95 are the higher of the individual parent or daughter LLD's.

(B) - These tabulated LLD values are for Ba-140, either based on direct measurement of Ba-140 or based on ingrowth of La-140, whichever method yields the greater sensitivity for a given sample.

3.b. SHORELINE SEDIMENT - (pCi/kg, dry weight)

<u>Sample Site</u>	<u>Collection Date</u>	<u>Be-7</u>	<u>K-40</u>	<u>Co-58</u>	<u>Co-60</u>	<u>Cs-134</u>	<u>Cs-137</u>	<u>Pb-210</u>	<u>Ra-226</u>	<u>Th-232</u>	<u>Others</u>
These samples were previously collected.											

3.c. BEACH SAND - (pCi/kg, dry weight)

<u>Sample Site</u>	<u>Collection Date</u>	<u>Be-7</u>	<u>K-40</u>	<u>Co-58</u>	<u>Co-60</u>	<u>Cs-134</u>	<u>Cs-137</u>	<u>Pb-210</u>	<u>Ra-226</u>	<u>Th-232</u>	<u>Others</u>
These samples were previously collected.											

3.d. GROUND WATER - (pCi/L)

<u>Sample Site</u>	<u>Collection Date</u>	<u>H-3</u>	<u>K-40</u>	<u>Mn-54</u>	<u>Co-58</u>	<u>Fe-59</u>	<u>Co-60</u>	<u>Zn-65</u>	Zr-95 (A)	Nb-95 (A)	I-131	Cs-134	Cs-137	Ba-140 La-140 (B)
H70	11-Apr-19	<140	<92	<6	<6	<12	<6	<13	<9	<8	<5	<7	<9	
H71	11-Apr-19	578 ± 54	378 ± 27	<4	<3	<7	<3	<8	<6	<5	<3	<4	<5	
H72	11-Apr-19	<140	250 ± 40	<6	<7	<15	<6	<14	<11	<9	<6	<6	<12	
H73	11-Apr-19	<140	96 ± 13	<3	<3	<6	<4	<7	<6	<5	<4	<4	<6	<6
H74	11-Apr-19	<140	272 ± 39	<6	<6	<11	<7	<13	<10	<8	<5	<6	<11	
H75	11-Apr-19	<140	278 ± 23	<4	<4	<7	<4	<7	<6	<5	<4	<3	<5	
H76	11-Apr-19	<140	<44	<3	<4	<7	<3	<8	<6	<6	<3	<3	<6	
H77	11-Apr-19	<142	<92	<6	<7	<10	<6	<14	<10	<9	<5	<6	<10	
H78	11-Apr-19	<140	<113	<6	<5	<12	<5	<13	<12	<9	<6	<6	<10	
H79	11-Apr-19	<140	<108	<6	<5	<12	<7	<12	<10	<8	<6	<7	<9	

(A) - These tabulated LLD values for Zr/Nb-95 are the higher of the individual parent or daughter LLD's.

(B) - These tabulated LLD values are for Ba-140, either based on direct measurement of Ba-140 or based on ingrowth of La-140, whichever method yields the greater sensitivity for a given sample.

4.a. GARDEN CROP - (pCi/kg, wet weight)

Sample Site	Collection Date	Be-7	K-40	I-131	Cs-134	Cs-137
H41		This sample was previously collected.				

4.b. CITRUS - (pCi/kg, wet weight)

Sample Site	Collection Date	Be-7	K-40	I-131	Cs-134	Cs-137
H23		This sample was previously collected.

(A) - These tabulated LLD values for Zr/Nb-95 are the higher of the individual parent or daughter LLD's.

(B) - These tabulated LLD values are for Ba-140, either based on direct measurement of Ba-140 or based on ingrowth of La-140, whichever method yields the greater sensitivity for a given sample.

\* Analysis of these two samples did not meet the required 15 pCi/L limit of detection for Ba-140/La-140 due to an oversight of lab

processes. Additional processes and training have been put in place to fix this oversight.

H41		This sample was previously collected.				

4.b. CITRUS - (pCi/kg, wet weight)

<u>Sample Site</u>	<u>Collection Date</u>	<u>Be-7</u>	<u>K-40</u>	<u>I-131</u>	<u>Cs-134</u>	<u>Cs-137</u>
H23		This sample was previously collected.				

RADIOLOGICAL SURVEILLANCE

OF

FLORIDA POWER AND LIGHT COMPANY

**ST. LUCIE PLANT**

FOURTH QUARTER 2019

BUREAU OF RADIATION CONTROL

## ST. LUCIE SITE

## Offsite Dose Calculation Manual Sampling

Fourth Quarter, 2019

<u>Sample Type</u>	<u>Collection Frequency</u>	<u>Locations Sampled</u>	<u>Number of Samples</u>
1. Direct Radiation	Quarterly	27	54
2. Airborne			
2.a. Air Iodines	Weekly	5	70
2.b. Air Particulates	Weekly	5	70
3. Waterborne			
3.a. Surface Water	Weekly	1	14
	Monthly	1	3
3.b. Shoreline Sediment	Semiannually	2	0
4. Ingestion			
4.a. Fish and Invertebrates			
4.a.1. Crustacea	Semiannually	2	0
4.a.2. Fish	Semiannually	2	1
4.b. Broadleaf Vegetation	Monthly	3	9
			Total: 221

NOTE: Measurement results having magnitudes that are significantly above the background of the measurement system are reported as net values plus or minus a one-standard-deviation error term. Measurement results that are not significantly above background are reported as less than a Lower Limit of Detection (<LLD), which is an estimated upper limit (with at least 95% confidence) for the true activity in the sample.

The marine fauna listed in this report were collected in part, under Florida FWC SAL030.

	20-Dec-19	<137	347 ± 27	<3	<3	<7	<3	<8	<5	<6	<3	<3	<6

(A) - These tabulated LLD values for Zr/Nb-95 are the higher of the individual parent or daughter LLD's.

(B) - These tabulated LLD values are for Ba-140, either based on direct measurement of Ba-140 or based on ingrowth of La-140, whichever method yields the greater sensitivity for a given sample.

\* Analysis of these two samples did not meet the required 15 pCi/L limit of detection for Ba-140/La-140 due to an oversight of lab

processes. Additional processes and training have been put in place to fix this oversight.

3.b. SHORELINE SEDIMENT - (pCi/kg, dry weight)

<u>Sample Site</u>	<u>Collection Date</u>	<u>Be-7</u>	<u>K-40</u>	<u>Co-58</u>	<u>Co-60</u>	<u>Cs-134</u>	<u>Cs-137</u>	<u>Pb-210</u>	<u>Ra-226</u>	<u>Th-232</u>	<u>U-235</u>	<u>U-238</u>

## ST. LUCIE SITE

## Supplemental Sampling

Fourth Quarter, 2019

<u>Sample Type</u>	<u>Collection Frequency</u>	<u>Locations Sampled</u>	<u>Number of Samples</u>
1. Direct Radiation	Quarterly	9	18
2. Airborne			
2.a. Air Iodines	Weekly	3	42
2.b. Air Particulates	Weekly	3	42
3. Waterborne			
3.a. Surface Water	Monthly	2	6
3.b. Shoreline Sediment	Semiannually	4	0
3.c. Beach Sand	Semiannually	3	0
3.d. Ground Water	Quarterly	10	10
4. Ingestion			
4.a. Garden Crops	Annually	1	0
4.b. Citrus	Annually	1	0
			Total: 118

NOTE: Measurement results having magnitudes that are significantly above the background of the measurement system are reported as net values plus or minus a one-standard-deviation error term. Measurement results that are not significantly above background are reported as less than a Lower Limit of Detection (<LLD), which is an estimated upper limit (with at least 95% confidence) for the true activity in the sample.

1. DIRECT RADIATION - TLD's - ( $\mu\text{R}/\text{hour}$ )

Sample Site	Deployment	05-Sep-19
	Collection	17-Dec-19
	Old	New
H08	$4.08 \pm 0.24$	$4.13 \pm 0.28$

(A) - These tabulated LLD values for Zr/Nb-95 are the higher of the individual parent or daughter LLD's.

(B) - These tabulated LLD values are for Ba-140, either based on direct measurement of Ba-140 or based on ingrowth of La-140, whichever method yields the greater sensitivity for a given sample.

\* Analysis of these three samples did not meet the required 15 pCi/L limit of detection for Ba-140/La-140 due to an oversight of lab processes. Additional processes and training have been put in place to fix this oversight.

Subject: Mixed-Analyte Performance Evaluation Program (MAPEP)

Our results from the DOE Mixed-Analyte Performance Evaluation Program (MAPEP) are enclosed. The results are from the MAPEP Series 40 for February 2019 and satisfy paragraph 6.8.4 of the technical specification for the St. Lucie and Turkey Point Plants. Please note that not all of the MAPEP Series 40 data pertains to samples analyzed for nuclear utilities, it is completed for other programs as well.

**We had no issues on any of the nuclides we are required to report in the ODCM.**

With this study, MAPEP has resumed providing an Alpha/Beta filter, which we passed. As per utility request, we also did a second Tritium study from ERA (ERA RAD 117), which we also passed. The reports are included with this letter.

If you have any further questions, please contact me.

Thank You,

Enclosed is your final report for ERA's RadCheM™ Proficiency Testing (PT) study, RAD-119. Your final report includes an evaluation of all results submitted by your laboratory to ERA.

**Data Evaluation Protocols:** All of the analytes in ERA's RAD-119 study have been evaluated by comparing your results to the acceptance limits and evaluation criteria contained in the current TNI FoPT tables.

**Corrective Action Help:** As part of your accreditation(s), you may be required to identify the root cause of any "Not Acceptable" results, implement the necessary corrective actions, and then satisfy your PT requirements by participating in a Supplemental (QuiK™Response) or future ERA PT study. If you need help, ERA's technical staff is available to help your laboratory resolve any technical issues that may be impairing your PT performance and possibly affecting your routine data quality. Our laboratory and technical staff have many years of collective experience in performing the full range of environmental analyses. As part of our technical support, ERA offers QC samples that can be useful in helping you work through your technical issues.

At the request of the TNI Accreditation Council, we have included a Laboratory Exception Report that includes a list of all analytes reported with less than qualifiers when the assigned value was greater than "0." In addition, because we have received many requests from laboratories, this report also includes a list of all analytes with "Not Acceptable" evaluations.

Some states have elected not to convert to the 2009 TNI Standards at this time. If you have released your results to a state that has retained the 2003 NELAC Evaluation Criteria, your final report will include a section that evaluates the results according to the 2003 Standard in addition to the 2009 TNI Standards.

Thank you for your participation in ERA's RadCheM™ Proficiency Testing study, RAD-119. If you have any questions, please contact our Proficiency Testing Department at 1-800-372-0122.

Sincerely,

A handwritten signature in black ink, appearing to read "Matthew Seebeck".

Matthew Seebeck  
Quality Officer

## RAD-119 Definitions & Study Discussion

**Study Dates:** 10/04/19 - 11/18/19

**Report Issued:** 11/20/19

### RAD Study Definitions

The Reported Value is the value that the laboratory reported to ERA.

The ERA Assigned Values are compliant with the most current TNI Fields of Proficiency Testing (FoPT) tables. The assigned values are directly traceable to the commercially prepared starting materials used to manufacture the PT standards.

The Acceptance Limits are established per the criteria contained in the most current TNI FoPT tables.

The Performance Evaluation:

Acceptable = Reported Value falls within the Acceptance Limits.

Not Acceptable = Reported Value falls outside the Acceptance Limits.

No Evaluation = Reported Value cannot be evaluated.

Not Reported = No Value reported.

The Method Description is the method the laboratory reported to ERA.

### RAD Study Discussion

ERA's RAD-119 RadCheM™ Proficiency Testing (PT) study has been reviewed by ERA senior management and certified compliant with the requirements of the 2009 TNI PT Standard and the criteria contained in the most current TNI Fields of Proficiency Testing (FoPT) tables.

ERA's RAD-119 RadCheM™ PT study standards were examined for any anomalies. A full review of all homogeneity, stability and accuracy verification data was completed. All analytical verification data for all analytes met the acceptance criteria contained in the 2009 TNI PT Standard and the criteria contained in the most current TNI FoPT tables.

The data submitted by participating laboratories was also examined for study anomalies. There were no anomalies observed during the statistical review of the data.

ERA's RAD-119 RadCheM™ study reports shall not be reproduced except in their entirety and not without the permission of the participating laboratories. The report must not be used by the participating laboratories to claim product endorsement by any agency of the U. S. government.

The data contained herein are confidential and intended for your use only.

If you have any questions or concerns regarding your assessment in ERA's RadCheM™ Proficiency Testing program, please contact our Proficiency Testing Department at 1-800-372-0122.

## 2009 TNI Evaluation Checks

There are no values reported with < where the assigned value was greater than 0.

## 2009 TNI Not Acceptable Evaluations

There were no Not Acceptable evaluations for this study.

All analytes are included in ERA's A2LA accreditation. Lab Code: 1539-01

# CERTIFICATE OF EXCELLENCE

In recognition of the quality of your laboratory in proficiency testing for  
**RAD-119**  
**State of Florida DOH**

is issued this certificate of achievement by ERA. This laboratory has been recognized as a Laboratory of Excellence for achieving 100% acceptable data in this study which included 43 participating laboratories. This achievement is a demonstration of the superior quality of the laboratory in evaluation of the standards listed below.

Iodine-131

Naturals™

TritiuM™
