MAY 11 1982

MEMORANDUM FOR: Ted Sullivan, Technical Assistant
Division of Engineering

THRU: James P. Knight, Assistant Director
for Components and Structures Engineering
Division of Engineering

FROM: George Lear, Chief
Hydrologic and Geotechnical Engineering Branch
Division of Engineering

SUBJECT: DEVELOPMENT OF GENERIC RECOMMENDATIONS BASED ON THE STEAM
GENERATOR TUBE RUPTURE AT GINNA

As per your note of May 6, 1982 we have reviewed NUREG-0909, "NRC Report on the January 25, 1982 Steam Generator Tube Rupture at R. E. Ginna Nuclear Power Plant" for possible generic implications in our areas of review. Due to the low level of activity in liquid releases after the incident and because we now evaluate potential contamination in the hydrosphere from assumed tank failures and core melt accidents, we have no generic recommendations as a result of the Ginna event.
