Washington, D. C. 20545

Attention: Mr. Donald J. Skovholt  
Assistant Director for  
Operating Reactors

Gentlemen:

Subject: Docket No. 50-206  
San Onofre Nuclear Generating Station  
Unit 1

In accordance with your request of December 22, 1972, we have reviewed the control circuits for circuit breakers of safety related equipment at San Onofre Nuclear Generating Station Unit 1.

Based on our review, it is concluded that disabling of one component does not, through incorporation in other interlocking or sequencing controls, render redundant components inoperable. All modes of test, operation, and failure were considered.

We are also reviewing station procedures to assure whenever part of a redundant system is removed from service, the portion remaining in service is functionally tested immediately after disabling of the affected portion and, if possible, before disabling of the affected portion. This review, along with any necessary revisions to the procedures, will be completed by April 30, 1973.

Sincerely,

*J. B. Moore*
