Gentlemen:

SUBJECT: NRC INSPECTION REPORT NO. 50-267/92-05

This refers to the routine safeguards inspection conducted by Mr. T. W. Dexter of this office on February 25-28, 1992. The inspection included a review of activities authorized for the Fort St. Vrain Nuclear Generating Station. At the conclusion of the inspection, the findings were discussed with Mr. F. Novachek and those members of your staff identified in the enclosed report.

The inspection reviewed certain areas of your physical security program. Within these areas, the inspection consisted of selective examination of procedures and representative records, interviews with personnel, and observations by the inspector.

Within the scope of this inspection, no violations were observed. However, two areas were identified that were of concern to the inspector. One involved poor housekeeping in the central and secondary alarm stations' work areas. The second concern involved a weakness with the protected area detection aids. These concerns are discussed in paragraph 2.2 and 2.4 of the enclosed report.

The material enclosed herewith contains Safeguards Information as defined by 10 CFR Part 73.21 and its disclosure to unauthorized individuals is prohibited by Section 147 of the Atomic Energy Act of 1954, as amended. Therefore, the material with the exception of the report cover page which is an inspection summary, will not be placed in the Public Document Room.

Should you have any questions concerning this inspection, we will be pleased to discuss them with you.

Sincerely,

Original signed by  
Thomas P. Gwynn for  
A. Bill Beach, Director  
Division of Reactor Safety
