Subject: Waterford 3 SES
Docket No. 50-382
License No. NPF-38
Station Blackout (SBO)

Gentlemen:

Entergy Operations, Waterford 3, on March 21, 1991 submitted a response to the NRC, letter W3F1-91-0227, describing an alternative approach for the restoration of the emergency diesel generators after an SBO. The letter in part stated that OP-009-002 would be revised to incorporate information about maintenance of the portable air compressor. In lieu of incorporating maintenance requirements into an operations procedure, periodic testing of the diesel to ensure continued operability will be defined and performed by preventative maintenance tasks. The portable air compressor was tested on April 4, 1991, for capacity and operability. Preventative maintenance tasks for the portable air compressor will be established by July 1, 1991.

Please contact me or Robert J. Murillo should there be any questions regarding this letter.

Very truly yours,

RFB/RJM/dc
