

ENCLOSURE 1

NOTICE OF VIOLATION

Georgia Power Company
Hatch Nuclear Plant

Docket Nos. 50-321 and 50-366
License Nos. DPR-57 and NPF-5

The following violations were identified during an inspection conducted on January 16-20, 1984. The Severity Levels were assigned in accordance with the NRC Enforcement Policy (10 CFR Part 2, Appendix C).

1. 10 CFR 50.54(q) requires that nuclear power reactor licensees follow and maintain in effect emergency plans which meet the requirements of Appendix E to 10 CFR Part 50 and the planning standards of 50.47(b). 10 CFR 50.47(b)(15) requires that those who may be called on to assist in an emergency be provided radiological emergency response training. Section J of the Hatch Nuclear Plant Emergency Plan states in part that it is the responsibility of the Emergency Director to recommend actions to the state agencies to protect the public. Section B of the Plan states that the Operations Supervisor initially takes charge of the emergency control measures by assuming the position of Emergency Director.

Contrary to the above, Operations Supervisors interviewed during the inspection were not adequately trained in that they were not capable of determining when and what type of protective action recommendations should be considered to protect health and safety.

This is a Severity Level IV (Supplement 1).

2. 10 CFR 50.54(q) requires that nuclear power reactor licensees follow and maintain in effect emergency plans which meet the requirements of Appendix E to 10 CFR Part 50 and the planning standards of 50.47(b). 10 CFR 50.47(b)(10) requires that the licensee's emergency plans shall include a range of protective actions consistent with Federal Guidance, for the plume exposure pathway EPZ for emergency workers and the public.

The Federal Guidance on protective actions to be recommended to offsite officials for general emergencies is addressed in Appendix 1 of NUREG-0654/FEMA-REP-1, Rev. 1, entitled "Criteria for Preparation and Evaluation of Radiological Emergency Preparedness in Support of Nuclear Power Plants." This guidance is clarified by IE Information Notice No. 83-28: "Criteria for Protective Action Recommendations for General Emergencies".

Contrary to the above, the licensee has failed to incorporate the above guidance in the Implementing Procedures in that no provision is made for a protective action recommendation upon initial declaration of a General Emergency. In addition, where guidance specifies evacuation for 5 miles in all directions and 10 miles downwind, the licensee's procedure specifies evacuation for 3 miles in all directions and 10 miles downwind.

This is a Severity Level IV Violation (Supplement 1) and applicable to all units.

Pursuant to 10 CFR 2.201, you are required to submit to this office within 30 days of the date of this Notice, a written statement or explanation in reply, including: (1) admission or denial of the alleged violations; (2) the reasons for the violations if admitted; (3) the corrective steps which have been taken and the results achieved; (4) corrective steps which will be taken to avoid further violations; and (5) the date when full compliance will be achieved.

Security or safeguards information should be submitted as an enclosure to facilitate withholding it from public disclosure as required by 10 CFR 2.790(d) or 10 CFR 73.21.

Date: MAR 01 1984
