On April 24, 1984, at 1035, with Unit 3 in Mode 1 at 100 percent power, the Train 'A' Containment Purge Isolation System (CPIS) (EIIS System Identifier VA) was spuriously actuated by electrical noise spikes from Containment Area Radiation Monitor 3RT-7804 (EIIS Component Identifier RT). Subsequent to this date, spurious actuations also occurred on May 2, 9, 10 and 12. During each event, airborne activity was below the radiation monitor 3RT-7804 alarm setpoint. All Train 'A' CPIS actuated valves

radiation monitor 3RT-7804 alarm setpoint. All Train 'A' CPIS actuated valves functioned properly. Therefore, there are no reasonable or credible circumstances

which would have increased the severity of these events.

The cause of the electrical spikes is under investigation as reported previously in Licensee Event Report (LER) 84-002 (Docket 50-361). Included in this investigation will be the feasibility of adding electrical spike suppression circuits to the containment airborne radiation monitors for Units 2 and 3. The results of this investigation will be submitted in a supplemental report for LER 84-002.

Subject: Docket No. 50-362

30-Day Report

Licensee Event Report No. 84-010

San Onofre Nuclear Generating Station, Unit 3

Pursuant to 10 CFR 50.73.a.2(iv), this submittal provides the required 30-day written Licensee Event Report (LER) for eight occurrences involving the actuation of the Containment Purge Isolation System (CPIS). Since these events involved the same components, system, cause, and method of discovery, these events have been combined into a single report in accordance with NUREG-1022. The health and safety of plant personnel or the public were not affected by these events.

If you require any additional information, please so advise.

Sincerely,

Vos Laynes
