50-A45/A46

Mr. Tom Ippolito
Division of Licensing
Office of Nuclear Reactor Regulation
United States Nuclear Regulatory Commission

Dear Mr. Ippolito:

This will confirm our discussion on May 24, 1984.

We have performed detailed studies bearing on the safety classifications of protective coatings inside containment. Sump performance is the primary basis for requiring containment coatings to be safety-related. Therefore, our studies have focused on sump performance and have taken into account NUREG 0897. These studies were performed by our A/E Gibbs & Hill and by Ebasco. In addition, a modeling test of the sump was performed in 1981 by Western Canada Hydraulic Laboratories.

I request a meeting in Bethesda on June 7, 1984 with you and other personnel you deem appropriate to discuss these studies and a related FSAR Amendment that we propose to file.

I propose to delivery ten (10) copies of our studies to you on June 4, 1984.

Your attention to this will certainly be appreciated.

Sincerely yours,

Bob S. Lacks

for Joe B. George
