4. Examination Review

The Initial written retake license examination was administered to one Reactor Operator candidate.

Prior to administration, the written examination was reviewed with personnel from the training and operations departments. All facility comments were resolved prior to exam administration. There were no post-exam comments. All licensee individuals involved with the review of the examination materials signed security agreements to ensure that there was no examination compromise.

5. Written Examination Strengths and Weaknesses

There were no strengths or weaknesses identified.
