"Generic Letter 89-13, 'Service Water
Problems Affecting Safety-Related
Equipment', " dated June 6, 1990.
 - 3) Letter from G. J. Beck, PECO to USNRC,
"Service Water Problems Affecting
Safety-Related Equipment, 'Implementation of
Actions', " dated August 5, 1991.

Dear Sir:

The subject Generic Letter 89-13 required licensees, pursuant to 10 CFR 50.54(f), to advise the NRC whether they have established programs to implement Recommendations I-V of the Generic Letter or that the licensee has pursued an equally effective alternative course of action. Further reporting requirements required that licensees confirm to the NRC that all the recommended actions or their justified alternatives have been implemented within 30 days of such implementation. Philadelphia Electric Company (PECO) detailed our program to implement the Generic Letter recommendations or alternatives in Reference 1. The NRC found this description of the program to satisfy the intent of the Generic Letter and requested that we notify the NRC when the actions specified in our January 29, 1990 letter are implemented, as documented in Reference 2. Reference 3 provided

this notification, with the single exception that the Residual Heat Removal Service Water (RHRSW) Design Basis Document (DBD) would not be complete until the fourth quarter of 1991. The RHRSW DBD Revision 0 was completed and issued for general use on December 31, 1991.

This letter should satisfy the final notification requirement for Generic Letter 89-13 for the Limerick Generating Station. If you have any questions, or require additional information, please contact us.

Very truly yours,

G. J. Beck
