Re: Maryland State Discharge
Permit No. 74-DP-0187 and
NPDES Permit No. MD 0002399

Dear Mr. Parise:

On January 12, 1983, outfall 001, monitoring point 101 experienced a total residual chlorine of about 3.0 ppm which is greater than the specification of 0.5 ppm. This condition existed for about 4 hours due to failure of a pump used to add the dechlorinating agent. Spare pumps are kept on site and allowed rapid corrective action once the problem was identified.

This matter had been communicated to you by telephone on January 13, 1983. Please feel free to call if you have any further questions.

Very truly yours,

L. B. Russell
Plant Superintendent
