Docket No. 50-423
B11201

Director of Nuclear Reactor Regulation
Mr. B. J. Youngblood, Chief
Licensing Branch No. 1
Division of Licensing
U.S. Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Mr. Youngblood:

Millstone Nuclear Power Station, Unit No. 3
Siting Analysis Branch (SAB) Meeting Summary

A meeting was held between the NRC-SAB and Northeast Nuclear Energy Company (NNECO) in Bethesda, Maryland, on May 7, 1984. The purpose of the meeting was to discuss discrepancies between population distribution by sector for the 10 to 50 mile area as provided by Stone & Webster Engineering Corporation (SWEC) in the Millstone 3 FSAR and sector counts provided to the NRC by Oak Ridge National Laboratory (ORNL) and Donnelly. Attachment 1 is a list of attendees.

Upon review of the maps it was agreed that map orientation was slightly different, with SWEC's map extending about 1.5 miles beyond the NRC's map in the SW sector and about 1.5 miles less than the NRC's map in the NE sector. It was also learned that the NRC centerpoint is between Units 1 and 2 and not on the Unit 3 reactor. NRC reviewer, Mr. J. Sinisgalli felt that the curvature of the earth could also be causing differences in the numbers since this was considered in the Donnelly analysis but not in the SWEC analysis.

Mr. J. Sinisgalli concluded that all methods were acceptable and that he would perform an independent analysis within the next two weeks and provide his final numbers to NNECO prior to publication. This analysis will be provided to the Accident Evaluation Branch to be used in performing the CRACK code analysis. Mr. Sinisgalli also requested that we provide him with the Canadian population counts we compiled for the Probabalistic Safety Study (PSS). Attachment II provides the Millstone Site population density data base as contained in Appendix 6-A of the PSS (pp. 6-A-1, -2, -3) and a table listing the 1931 Canadian population included between 200-350 miles.
