U. S. Nuclear Regulatory Commission
Attn: Document Control Desk
Washington, D.C. 20555

SUBJECT: COMANCHE PEAK STEAM ELECTRIC STATION (CPSES) - UNIT 1
SOCKET NO. 79-445
TRANSMITTAL OF INSERVICE INSPECTION PROGRAM PLAN
INTERIM CHANGE REQUEST NOS ISI-RO-001 AND ISI-RO-002

Gentlemen:

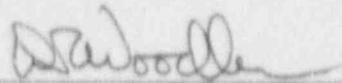

Enclosed are the following documents to update your copies of the Inservice Inspection Program Plan:

1. Interim Change Request No. ISI-RO-001
2. Interim Change Request No. ISI-RO-002

If you have any questions regarding these changes, please contact Mr. C. E. Jensen at (214) 812-8826.

Sincerely,

William J. Cahill, Jr.

By: 
D. R. Woodlan
Docket Licensing Manager

INDEX

ISI PLAN INTERIM CHANGE REQUESTS (ICRs)

<u>ICR NO /DATE</u>	<u>AFFECTED PAGE(S)</u>	<u>DESCRIPTION OF CHANGE</u>
ISI-RO-001 8/16/91	1-4	Clarify weld marking for welds which have not been marked.
	4-5	Adopt code cases N-401 and N-401-1.
	4.1 page 7	Add RV internals
	4.1 page 15, 16, 17, 18	Reschedule RV stud
	4.1 pages 26, 27, 28, 29	Reschedule RV nut
	4.1 pages 35, 36, 37	Reschedule RV washer
	4.1 page 47	Correct typographical error
	4.1 page 92	Correct component number
	4.1 page 359	Schedule Regenerative HX supports

1.7

REFERENCE SYSTEM

Weld areas subject to surface or volumetric examination shall be identifiable through a reference system as specified by Subarticle IWA-2600 and Appendix III of the Code. This system shall consist of a combination of physical markings and written direction provided in this plan and in site implementing procedures. Welds within the boundaries of the ISI program are uniquely identified on isometric drawings which provide weld numbers and locations. In those cases where the physical configuration will not provide positive weld location, dimensional information can be obtained from construction isometric drawings or piping fabrication drawings to allow for such positive identification. These documents are maintained as permanent plant records. Welds which were inadvertently not marked or whose marks have been removed shall be marked at the time inservice inspection is performed. The method of marking these indications on the pipe will be delineated in the implementing procedures.

1.8

RELIEF REQUESTS

Where a particular examination requirement of the Code is determined to be impractical, a request for relief from the requirement shall be submitted pursuant to the requirement of 10CFR50.55a (g)(6)(i).

Each request for relief shall contain the following information, as a minimum:

- A. Identification of the component(s) for which relief is requested;
- B. Code class of the component(s);
- C. Code examination requirements for the component(s);
- D. Basis for the request;
- E. Propose alternative examinations, if any; and,
- F. Anticipated impact on the overall level of plant quality and safety.

Requests for relief from impractical Code requirements that are presently known are contained within this plan. These relief requests are contained in Appendix A. For those impractical Code requirements that may become apparent in the course of the ISI, a request for relief shall be prepared and submitted to the Regulatory Authorities for approval.

1.9

RECORDS RETENTION

Records and documentation of information and examination results which provide the basis for evaluation and facilitate the comparison of examination results from previous and subsequent examinations shall be maintained as permanent plant records at CPSES in accordance with Article IWA-6000 of the Code. As a minimum, this documentation shall include the applicable records described in Subsubarticle IWA-6340.

EDDY CURRENT

Eddy current testing (ET) of the steam generator tubes shall be accomplished to the extent and frequency defined in Technical Specification Section 4.0.6; results of the examination shall be evaluated against acceptance criteria contained within this section. The need for corrective action including expanded examination samples shall also be governed by the Technical Specifications, as shall the reporting requirements. All other examination parameters shall be in accordance with ASME Section XI, Appendix IV. These measures will provide compliance with the inspection requirements of Reg. Guide 1.83.

The provisions of Code Case N-401 and N-401-1 have been adopted to allow recording of eddy current data using digitized collection and storage as an alternative to the requirement of ASME Section XI, Appendix IV for magnetic tape and strip chart recording.

Additionally to address issues raised in NRC Bulletins 85-02 and 88-02, as well as high preheater flow rates, the following actions shall be taken.

85-02

Where ET indications are detected in the free span of peripheral tubes a visual exam shall be conducted unless it can be determined that the indication did not result from damage by a loose part or foreign object.

88-02

ET results shall be examined for denting at the upper tube support plate. "Denting" is considered to include evidence of upper support plate corrosion and the presence of magnetite in the tube-to-support plate cervices, regardless of whether there is detectable distortion of the tube.

Preheater Flow

High flow rates have been detected in the preheater region of steam generators 2 and 3 during 100% power operation (Ref. ONE Form FX90-1891). To ensure that any increased wear associated with these high flow rates is detected, certain tubes in the preheater shall be examined. These include the first five rows of tubes adjacent to the T-slot and peripheral tubes between rows 30 and 49. These tubes shall be examined during the first examination and at intervals not to exceed 5 years thereafter.

INTERIM CHANGE REQUEST

Plan Title/Rev Inservice Inspection Program / 0

ICR No. ISI-RO-002

Reference: Page 193, 194, 195, 196, 197 and NOTES of Section 5
Table 9
Relief Request, and/or
Component: RC Piping

Reason for Change: The portion of the reactor coolant system which extends from the reactor vessel to the outer surface of the missile shield wall is essentially inaccessible for direct observation during system pressure tests.

Reference correspondence: TXX-91377, TXX-91406, NRC letter 11/25/91 - Bergman to Cahill

Proposed Revision: A note shall be added to the pressure test requirements for the main coolant loop piping stating that the outer surface of the missile shield wall will be examined for evidence of leakage in lieu of a direct visual examination.

NOTES:

1. Storage tank or extension of storage tank.
2. Containment isolation piping.
3. Demonstration of an open flow path test shall be performed in lieu of the system hydrostatic test.
4. Confirmation of adequate flow during system operation shall be performed in lieu of system hydrostatic test.
5. See Relief Request D-1.
6. Those portions of the reactor coolant (RC) system main coolant loop piping between the reactor vessel and the outer portion of the missile shield are considered inaccessible. The outer surface of the shield wall shall be examined for evidence of leakage.
