

August 29, 1995

LICENSEE: GPU Nuclear Corporation

FACILITY: Oyster Creek Nuclear Generating Station

SUBJECT: SUMMARY OF AUGUST 23, 1995 MEETING REGARDING ISSUES RELATED TO SECURITY ACTIVITIES IN ROCKVILLE, MARYLAND

A meeting took place at the NRC offices in Rockville, Maryland, on August 23, 1995, with GPU Nuclear Corporation concerning the Oyster Creek Nuclear Generating Station. Several security issues were discussed between members of the licensee, headquarters staff, and regional safeguards inspector. Attached is the list of individuals participating in the discussion.

The licensee will be applying for a license to store spent fuel from the reactor core at a storage facility located within the owner controlled area. This independent spent fuel storage installation (ISFSI) will be licensed under 10 CFR Part 72 and meet the security requirements in both Parts 72 and 73.

Other issues discussed during the meeting included the issuance of the temporary instructions for the Vehicle Barrier System, a proposed rule change to 10 CFR 73.55(d)(8) which would allow a licensee to modify how they control access to containment during outages and maintenance, and whether the site could get any relief from the current regulatory requirements for protected area lighting.
