## Inspection Summary

Areas Inspected: Included a review of the circumstances surrounding a physical security event resulting from a failure to control access to Unit 1 containment during a refueling outage, and the reportability of the event. Applicable areas inspected included:

Security Plan and Implementing Procedures; Access Control - Vital Areas, and Record and Reports.

The inspection involved 33 inspector hours on site by one NRC inspector. The inspection was begun during an offshift period; six inspection hours were accomplished during offshift periods.

Results: The licensee was found to be in compliance with NRC requirements within the three areas examined during the inspection except for the following item:

Access Control - Vital Area
