Secretary, Nuclear Regulatory Commission

OFFICE OF SECRETARY
DOCKETING & SERVICE
BRANCH

In February the Nuclear Energy Institute proposed amendments on fire safety for all nuclear power plants.

I'm very concerned that the nuclear industry will cut costs at the expense of public safety. A major fire could disable so much equipment that PSE&E would not be able to shut down & keep the reactors cool.

I'm opposed to reducing fire safety standards in anyway. I know personally of several potential serious fires at Diablo Canyon since my husband was the County Fire Warden during the 80's.

PSE&E has not been diligent in maintaining fire safety standards. Fire safety standards & NRC oversight should be strengthened not weakened.

A major fire could be disastrous.

Sincerely,
Patricia H. Frank
