JAN 28 1992

Docket No. 50-219

Mr. John J. Barton  
Vice President and Director  
GPU Nuclear Corporation  
Oyster Creek Nuclear Generating Station  
Post Office Box 388  
Forked River, New Jersey 08731

Dear Mr. Barton:

Subject: NRC Inspection No. J-219/92-01

A routine unannounced safety inspection of the radwaste management and transportation program at your facility was conducted by P. O'Connell on January 13 to 16, 1992. The areas inspected are important to health and safety and included: the status of previously identified items, organization, audits, training of radwaste personnel, radwaste facility tours, review of shipping records and scaling factors.

The inspector noted that you have maintained a well qualified, stable workforce in the radwaste organization. You have made excellent progress in removing the contents of the five tanks of liquid radioactive waste located in the Old Radwaste Building. The inspector noted a weakness in the lack of a periodic retraining program for the auditors responsible for conducting the annual audits of the radwaste and transportation program. Regarding this finding, it is our understanding that your staff will review this matter and make appropriate changes.
