DMB 016

Docket No. 50-289

LICENSEE: GPU Nuclear Corporation

FACILITY: Three Mile Island, Unit 1

SUBJECT: SUMMARY OF MEETING WITH GPU NUCLEAR CORPORATION
INSERVICE TESTING OF PUMPS AND VALVES (IST)

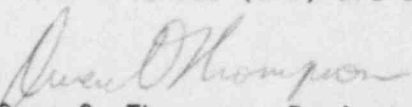

On Tuesday May 15, 1984 at 10:00am, the staff and licensee met in Bethesda, Maryland to discuss Inservice Testing of Pumps and Valves (IST). The attendance list and transcript are enclosed. (1 and 2)

The licensee made a presentation (enclosure 3) on each topic contained in NRC memorandums that were distributed with the meeting notice dated May 4, 1984 (enclosure 4). The staff and licensee discussed these topics to identify the actions needed to complete the staff review of IST relief requests.

The licensee was informed that updating of the TMI-1 IST program to the 1980 version of the ASME Code, Section IX, would not be discussed because updating is required for the next 120-month inspection program (10 CFR 50.55a4(ii)), which becomes effective in September 1984 for TMI-1. The licensee committed to provide by June 15, 1984, the submittal in support of the next 120-month inspection program, including updating to the 1980 version.

For a number of the discussion items the frequency of testing valves was an issue. The licensee stated that many valves had been disassembled in recent years and had shown no significant deterioration since the plant began operating 10 years ago. The staff agreed that such historical data may provide a basis for extended IST disassembly/inspection intervals, for some valves. The licensee committed to provide a comprehensive report of this data (Valve Disassembly/Inspection Report) by June 1, 1984.

Other actions to be taken by the staff and licensee (GPU) are summarized in enclosures 5 and 6.

Owen O. Thompson, Project Manager
Operating Reactors Branch #4, DL
