Subject: Docket No. 50-482: Semi-annual Fitness for Duty Program
Performance Data Report

Gentlemen:

The purpose of this letter is to transmit the Semi-annual Fitness for Duty Program Performance Data Report for Wolf Creek Generating Station. This report covers the six month period beginning July 1, 1991 and ending on December 31, 1991 and is being submitted in accordance with 10 CFR 26.71(d).

Very truly yours,

John A. Bailey
Vice President
Operations

Positive test results.

One employee tested positive for marijuana during the period July 1, 1991, through December 31, 1991. The employee was not a supervisor or licensed operator, and therefore there was no reporting obligation under 10 CFR 26.73. The employee's unescorted access was suspended for 19 days during EAP referral and evaluation. A joint decision of the EAP, MRO and Manager Human Resources resulted in reinstatement to duty, conditioned upon the employee's commitment to discontinue abusive use of substances, continue counseling as directed by the EAP and submit to examinations by company medical and psychological personnel upon request. The employee tested negative for all substances under direct observation prior to reinstatement. This is the first employee drug positive for WCNOG since the implementation of the fitness-for-duty rule in January of 1990.

Two contractors tested positive on pre-badging screens, one for marijuana and the other for alcohol. Both individuals were denied access.

WCNOG had a total of six "for-cause" screens during this reporting period. Two contractor personnel tested positive for alcohol. Their unescorted access was revoked. One contractor tested positive for marijuana during a random screen. This individual had already left site before WCNOG received test results. All three individuals will be denied access in the future at WCNOG and the badging database is "flagged" to prevent oversight. Additionally, these individuals are entered into INDEX and that shared database reflects an unfavorable access status and a positive drug/alcohol screen.

Initiatives taken.

Revisions were begun to WCNOG's FFD escort training program in 1991 and it is anticipated that the revised program will be implemented in 1992. Prior training made use of multiple videotapes purchased or filmed by WCNOG in 1989 that provided all necessary training information. The new program represents an effort at better organization of the materials, incorporation of lessons learned and procedural changes, and the use of new and better commercial videotapes on such subjects as behavior observation and the effects of drugs and alcohol upon persons. The new training program incorporates all the materials into one comprehensive videotape that could be administered in any location, and uses an examination to measure comprehension of materials.

Summary of events reported under 10 CFR 26.73.

There was one reportable event during this reporting period. A WCNOG employee found a small bag of marijuana in the protected area. Security was contacted and all reports made. The substance was found in a 3" square tube steel support at the 2025 level of the turbine building. The bag containing the marijuana was coated with heavy rust, indicating that the bag had been hidden in the tube for a long period of time. The location of the bag also suggested that it had been there for a long period. Therefore, there was no probable cause to believe that current or recent employee or contractor personnel had been involved in the act, and no further investigation was deemed necessary.
