Docket No. 50-277

Mr. John F. Stolz
Operating Reactors Branch #4
Division of Licensing
U.S. Nuclear Regulatory Commission
Washington, D.C. 20555

REFERENCE: S. L. Daltroff, Philadelphia Electric Company,
to J. F. Stolz, USNRC, letter, March 8, 1984

Dear Mr. Stolz:

The reference letter forwarded to the Commission Philadelphia Electric Company's plans for a Radiation Protection Program for recirculation and RHR piping replacement on Peach Bottom Unit 2. Subsequent to this submittal, the NRC issued Generic Letter 84-07, "Procedural Guidance for Pipe Replacement at BWR's". At a presentation to the Region I Office of Inspection and Enforcement on April 5, 1984, the staff requested us to furnish a detailed description of pre-planning procedures, shielding, equipment, personnel training, estimated total cumulative dose and other measures to be taken to keep exposures as low as reasonably achievable.

In accordance with Generic Letter 84-07 and subsequent discussions with the NRC staff, attached is a detailed description of our radiation protection program to be implemented during the Unit 2 pipe replacement.

If you have any questions, please do not hesitate to contact us.
