SUBJECT: NRC INSPECTION REPORT 50-382/95-07

This refers to the inspection conducted by Mr. E. J. Ford and others of this office on July 9 through August 19, 1995. The inspection included a review of activities authorized for your Waterford Steam Electric Station, Unit 3 facility. At the conclusion of the inspection, the findings were discussed with those members of your staff identified in the enclosed report.

Areas examined during the inspection are identified in the report. Within these areas, the inspection consisted of selective examinations of procedures and representative records, interviews with personnel, and observation of activities in progress. The results of this inspection are documented in the enclosed report.

The inspection identified a repeat occurrence in which as-found values were improperly obtained. Although there was little safety significance to the occurrence, it is of concern because this issue was previously identified by the inspectors on July 6, 1995. This repeat occurrence indicates that intra-department communications have been ineffective in preventing personnel from improperly obtaining as-found values.

In accordance with 10 CFR 2.790 of the NRC's "Rules of Practice," a copy of this letter and its enclosures will be placed in the NRC Public Document Room.

Should you have any questions concerning this inspection, we will be pleased to discuss them with you.

Sincerely,

A handwritten signature in cursive script, appearing to read "J. E. Dyer".

J. E. Dyer, Director
Division of Reactor Projects
